For Your Safety

IMPORTANT SAFETY INSTRUCTIONS

- Read Instructions: All the safety and operating instructions should be read before the appliance is operated.
- Retain Instructions: The safety and operating instructions should be retained for future reference.
- Heed Warnings: All warnings on the appliance and in the operating instructions should be adhered to.
- Follow Instructions: All operating and use instructions should be followed.

Installation

Power Sources: This video product should be operated only from the type of power source indicated on the marking label. If you are not sure of the type of power supply to your home, consult your appliance dealer or local power company. For video products intended to operate from battery power, or other sources, refer to the operating instructions.

Grounding or Polarization: This video product is equipped with a polarized alternating-current line plug (a plug having one blade wider than the other). This plug will fit into the power outlet only one way. This is a safety feature. If you are unable to insert the plug fully into the outlet, try reversing the plug. If the plug should still fail to fit, contact your electrician to replace your obsolete outlet. Do not defeat the safety purpose of the polarized plug.

Alternate Warnings: This video product is equipped with a three-wire grounding-type plug, a plug having a third (grounding) pin. This plug will only fit into a grounding-type power outlet. This is a safety feature. If you are unable to insert the plug into the outlet, contact your electrician to replace your obsolete outlet. Do not defeat the safety purpose of the grounding type plug.

Overloading: Do not overload wall outlets and extension cords as this can result in a risk of fire or electric shock.

Ventilation: Slots and openings in the cabinet are provided for ventilation, to ensure reliable operation of the video product and to protect it from overheating, and these openings must not be blocked or covered. The openings should never be blocked by placing the video product on a bed, sofa, rug, or other similar surface.

This video product should not be placed in a built-in installation such as a bookcase or rack unless proper ventilation is provided or the manufacturer’s instructions have been adhered to. This video product should never be placed near or over a radiator or heat register.

Attentions: Do not use attachments not recommended by the video product manufacturer as they may cause hazards.

Water and Moisture: Do not use this video product near water—for example, near a bath tub, wash bowl, kitchen sink, or laundry tub, in a wet basement, or near a swimming pool, and the like.

Power-Cord Protection: Power-supply cords should be routed so that they are not likely to be walked on or pinched by items placed upon or against them, paying particular attention to cords at plugs, convenience receptacles, and the point where they exit from the appliance.

Accessories: Do not place this video product on an unstable cart, stand, tripod, bracket, or table. The video product may fall, causing serious injury to a child or adult, and serious damage to the appliance. Use only with a cart, stand, tripod, bracket, or table recommended by the manufacturer, or sold with the video product. Any mounting of the appliance should follow the manufacturer’s instructions, and should use a mounting accessory recommended by the manufacturer.

An appliance and cart combination should be moved with care. Quick stops, excessive force, and uneven surfaces may cause the appliance and cart combination to overturn.

Antennas

Outdoor Antenna Grounding: If an outside antenna or cable system is connected to the video product, be sure the antenna or cable system is grounded so as to provide some protection against voltage surges and built-up static charges. Section 810 of the National Electrical Code, ANSI/NFPA No. 70, provides information with respect to proper grounding of the mast and supporting structure, grounding of the lead-in wire to an antenna discharge unit, size of grounding conductors, location of antenna discharge unit, connection to grounding electrodes, and requirements for the grounding electrode.

Use

Cleaning: Unplug this video product from the wall outlet before cleaning. Do not use liquid cleaners or aerosol cleaners. Use a damp cloth for cleaning.

Object and Liquid Entry: Never push objects of any kind into this video product through openings as they may touch dangerous voltage points or short out parts that could result in a fire or electric shock. Never spill liquid of any kind on the video product.

Lightning: For added protection for this video product receiver during a lightning storm, or when it is left unattended and unused for long periods of time, unplug it from the wall outlet and disconnect the antenna or cable system. This will prevent damage to the video product due to lightning and power-line surges.
Servicing: Do not attempt to service this video product yourself as opening or removing covers may expose you to dangerous voltage or other hazards. Refer all servicing to qualified service personnel.

Damage Requiring Service: Unplug this video product from the wall outlet and refer servicing to qualified service personnel under the following conditions:
- When the power-supply cord or plug is damaged.
- If liquid has been spilled, or objects have fallen into the video product.
- If the video product has been exposed to rain or water.
- If the video product has been dropped or the cabinet has been damaged.
- If the video product does not operate normally when following the operating instructions.

If the video product does not operate normally — the following conditions indicate a need for service.
- The video product exhibits a distinct change in performance.
- The video product exhibits a change in picture quality.
- The video product exhibits a change in sound quality.
- The video product exhibits a change in operational characteristics such as the original part of the video product.
- Unauthorized substitutions may result in fire, electric shock or other hazards.

Replacement Parts: When replacement parts are required, be sure the service technician has used replacement parts specified by the manufacturer or have the same characteristics as the original part. Unauthorized substitutions may result in fire, electric shock or other hazards.

Safety Check: Upon completion of any service or repairs to this video product, ask the service technician to perform safety checks to determine that the video product is in proper operating condition.

Be sure to read these notes before use

Safety Notes

- Make sure that you use your camera correctly. Read these safety notes and your Owner’s Manual carefully before use.
- After reading these safety notes, store them in a safe place.

About the Icons

The icons shown below are used in this document to indicate the severity of the injury or damage that can result if the information indicated by the icon is ignored and the product is used incorrectly as a result.

- **WARNING**: This icon indicates that death or serious injury can result if the information is ignored.
- **CAUTION**: This icon indicates that personal injury or material damage can result if the information is ignored.

The icons shown below are used to indicate the nature of the instructions which are to be observed.

- **WARNING**: Triangular icons tell you that this information requires attention (“Important”).
- **CAUTION**: Circular icons with a diagonal bar tell you that the action indicated is prohibited (“Prohibited”).
- **CAUTION**: Filled circles with an exclamation mark indicate an action that must be performed (“Required”).

**WARNING**

- Do not use the camera in the bathroom or shower. This can cause a fire or electric shock.
- Never attempt to change or take apart the battery (never open the case). Failure to observe this precaution could result in fire or electric shock.
- Do not attempt to change or take apart the camera (never open the case). Failure to observe this precaution could result in fire or electric shock.
- Should the case break open as the result of a fall or other accident, do not touch the exposed parts. Failure to observe this precaution could result in electric shock or injury from touching the damaged parts. Remove the battery immediately, taking care to avoid injury or electric shock, and take the product to the point of purchase for consultation.
- Do not change, heat or unduly twist or pull the connection cord. These actions could damage the cord and cause a fire or electric shock. If the cord is damaged, contact your FUJIFILM dealer.
- Do not place the camera on an unstable surface. This can cause the camera to fall or tip over and cause injury.
- Never attempt to take pictures while in motion. Do not use the camera while walking or driving. This can result in you falling down or being involved in a traffic accident.
- Do not touch any metal parts of the camera during a thunderstorm. This can cause an electric shock due to induced current from the lightning discharge.
- Do not allow water or foreign objects to enter the camera. If water or foreign objects get inside the camera, turn the camera off, remove the battery, and disconnect and unplug the AC power adapter. Continued use of the camera can cause a fire or electric shock. Contact your FUJIFILM dealer.
For Your Safety

<thead>
<tr>
<th>WARNING</th>
</tr>
</thead>
<tbody>
<tr>
<td>Use only batteries or AC power adapters specified for use with this camera. Do not use voltages other than the power supply voltage shown. The use of other power sources can cause a fire.</td>
</tr>
<tr>
<td>If the battery leaks and fluid gets in contact with your eyes, skin or clothing, flush the affected area with clean water and seek medical attention or call an emergency number right away.</td>
</tr>
<tr>
<td>Do not use the charger to charge batteries other than those specified here. The supplied charger is for use only with batteries of the type supplied with the camera. Using the charger to charge conventional batteries or other types of rechargeable batteries can cause the battery to leak, overheat or burst.</td>
</tr>
<tr>
<td>Do not use in the presence of flammable objects, explosive gases, or dust.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>CAUTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Keep out of the reach of small children. This product could cause injury in the hands of a child.</td>

</table>

<table>
<thead>
<tr>
<th>The Battery and Power Supply</th>
</tr>
</thead>
<tbody>
<tr>
<td>Note: Check the type of battery used in your camera and read the appropriate sections.</td>
</tr>
</tbody>
</table>

The following describes the proper use of batteries and how to prolong their life. Incorrect use can shorten battery life or cause leakage, overheating, fire, or explosion.

<table>
<thead>
<tr>
<th>Li-ion Batteries</th>
</tr>
</thead>
<tbody>
<tr>
<td>Read this section if your camera uses a rechargeable Li-ion battery.</td>
</tr>
</tbody>
</table>

The battery is not charged at shipment. Charge the battery before use. Keep the battery in its case when not in use.

- **Notes on the Battery**
  The battery gradually loses its charge when not in use. Charge the battery one or two days before use.

  Battery life can be extended by turning the camera off when not in use.

  Battery capacity decreases at low temperatures; a depleted battery may not function when cold. Keep a fully charged spare battery in a warm place and exchange as necessary, or keep the battery in your pocket or other warm place and insert it in the camera only when shooting. Do not place the battery in direct contact with hand warmers or other heating devices.

- **Charging the Battery**
  Charge the battery in the supplied battery charger. Charging times will increase at ambient temperatures below +10°C (+50°F) or above +35°C (+95°F). Do not attempt to charge the battery at temperatures above 40°C (+104°F); at temperatures below 0°C (+32°F), the battery will not charge.

  Do not attempt to recharge a fully charged battery. The battery does not however need to be fully discharged before charging.

  The battery may be warm to the touch immediately after charging or use. This is normal.
Battery Life
At normal temperatures, the battery can be recharged about 300 times. A noticeable decrease in the length of time the battery will hold a charge indicates that it has reached the end of its service life and should be replaced.

Storage
Performance may be impaired if the battery is left unused for extended periods when fully charged. Run the battery flat before storing it.

If the camera will not be used for an extended period, remove the battery and store it in a dry place with an ambient temperature of from +15 °C to +25 °C (+59 °F to +77 °F). Do not store in locations exposed to extremes of temperature.

Cautions: Handling the Battery
- Do not transport or store with metal objects such as necklaces or hairpins.
- Do not expose to flame or heat.
- Do not disassemble or modify.
- Use with designated chargers only.
- Dispose of used batteries promptly.
- Do not drop or subject to strong physical shocks.
- Do not expose to water.
- Keep the terminals clean.
- The battery and camera body may become warm to the touch after extended use. This is normal.

AA Alkaline/Rechargeable Ni-MH Batteries
Read this section if your camera uses AA alkaline or rechargeable AA Ni-MH batteries. Information on compatible battery types may be found elsewhere in the camera manual.

Cautions: Handling the Batteries
- Do not expose to water, flame, or heat, or store in warm or humid conditions.
- Do not transport or store with metal objects such as necklaces or hairpins.
- Do not disassemble or modify the batteries or battery casing.
- Do not subject to strong physical shocks.

- Do not use batteries that are leaking, deformed, or discolored.
- Keep out of reach of infants and small children.
- Insert in the correct orientation.
- Do not mix old and new batteries, batteries with different charge levels, or batteries of different types.
- If the camera will not be used for an extended period, remove the batteries. Note that the camera clock will be reset.
- The batteries may be warm to the touch immediately after use. Turn the camera off and allow the batteries to cool before handling.
- Battery capacity tends to decrease at low temperatures. Keep spare batteries in a pocket or other warm place and exchange as necessary. Cold batteries may recover some of their charge when warmed.
- Fingerprints and other stains on the battery terminals can impair battery performance. Thoroughly clean the terminals with a soft, dry cloth before inserting them in the camera.

- If the batteries leak, clean the battery compartment thoroughly before inserting new batteries.

- If fluid from the battery comes into contact with skin or clothing, flush the affected area with water. If fluid enters your eyes, immediately flush the affected area with water. Do not rub your eyes. Failure to observe this precaution could result in permanent visual impairment.

- CAUTION: Do not use the discharge option with alkaline batteries.

Ni-MH Batteries
The capacity of Ni-MH batteries may be temporarily reduced when new, after long periods of disuse, or if they are repeatedly recharged before being fully discharged. This is normal and does not indicate a malfunction. Capacity can be increased by repeatedly discharging the batteries using the discharge option in the camera setup menu and recharging them using a battery charger.

- CAUTION: Do not use the discharge option with alkaline batteries.

The camera draws a small amount of current even when off. Ni-MH batteries that have been left in the camera for an extended period may be drawn down to the point that they no longer hold a charge. Battery performance may also drop if the batteries are run down in a device such as a flashlight. Use the discharge option in the camera setup menu to discharge Ni-MH batteries. Batteries that no longer hold a charge even after repeatedly being discharged and recharged have reached the end of their service life and must be replaced.

Ni-MH batteries can be recharged in a battery charger (sold separately). Batteries may become warm to the touch after charging. Refer to the instructions provided with the charger for more information. Use the charger with compatible batteries only.

Ni-MH batteries gradually lose their charge when not in use.

Disposal
CAUTION: Dispose of used batteries in accord with local regulations.

AC Power Adapters (Available Separately)
This section applies to all camera models. Use only FUJIFILM AC power adapters designated for use with this camera. Other adapters could damage the camera.
- The AC power adapter is for indoor use only.
- Be sure the DC plug is securely connected to the camera.
- Turn the camera off before disconnecting the adapter. Disconnect the adapter by the plug, not the cable.
- Do not use with other devices.
- Do not disassemble.
- Do not expose to high heat and humidity.
- Do not subject to strong physical shocks.
- The adapter may hum or become hot to the touch during use. This is normal.
- If the adapter causes radio interference, reorient or relocate the receiving antenna.
For Your Safety

**Using the Camera**

- Do not aim the camera at extremely bright light sources, such as the sun in a cloudless sky. Failure to observe this precaution could damage the camera image sensor.
- Strong sunlight focused through the viewfinder may damage the panel of electronic viewfinder (EVF). Do not aim the electronic viewfinder at the sun.

**Take Test Shots**

Before taking photographs on important occasions (such as at weddings or before taking the camera on a trip), take a test shot and view the results to ensure that the camera is functioning normally. FUJIFILM Corporation cannot accept liability for damages or lost profits incurred as a result of product malfunction.

**Notes on Copyright**

Unless intended solely for personal use, images recorded using your digital camera system cannot be used in ways that infringe copyright laws without the consent of the owner. Note that some restrictions apply to the photographing of stage performances, entertainments, and exhibits, even when intended purely for personal use. Users are also asked to note that the transfer of memory cards containing images or data protected under copyright laws is only permissible within the restrictions imposed by those copyright laws.

**Handling**

To ensure that images are recorded correctly, do not subject the camera to impact or physical shocks while images are being recorded.

**Liquid Crystal**

In the event that the display is damaged, care should be taken to avoid contact with liquid crystal. Take the urgent action indicated should any of the following situations arise:

- **If liquid crystal comes in contact with your skin**, clean the area with a cloth and then wash thoroughly with soap and running water.
- **If liquid crystal enters your eyes**, flush the affected eye with clean water for at least 15 minutes and then seek medical assistance.
- **If liquid crystal is swallowed**, rinse your mouth thoroughly with water. Drink large quantities of water and induce vomiting, then seek medical assistance.

Although the display is manufactured using extremely high-precision technology, it may contain pixels that are always lit or that do not light. This is not a malfunction, and images recorded with the product are unaffected.

**Trademark Information**

Digital Split Image is a trademark or registered trademark of FUJIFILM Corporation. xD-Picture Card and SD are trademarks of FUJIFILM Corporation. The typefaces included herein are solely developed by DynaComware Taiwan Inc. Macintosh, QuickTime, and Mac OS are trademarks of Apple Inc. in the U.S.A. and other countries. Windows 8, Windows 7, Windows Vista, and the Windows logo are trademarks of the Microsoft group of companies. Wi-Fi® and Wi-Fi Protected Setup® are registered trademarks of the Wi-Fi Alliance. Adobe and Adobe Reader are either trademarks or registered trademarks of Adobe Systems Incorporated in the U.S.A. and/or other countries. The SDHC and SDXC logos are trademarks of SD-3C, LLC. The HDMI logo is a trademark. YouTube is a trademark of Google Inc. All other trade names mentioned in this manual are the trademarks or registered trademarks of their respective owners.

**Color Television Systems**

NTSC (National Television System Committee) is a color television telecasting specification adopted mainly in the U.S.A., Canada, and Japan. PAL (Phase Alternation by Line) is a color television system adopted mainly in European countries and China.

**Electrical Interference**

Exif Print is a newly revised digital camera file format in which information stored with photographs is used for optimal color reproduction during printing.

**NOTICES**

Direct or indirect export, in whole or in part, of licensed software without the permission of the applicable governing bodies is prohibited.

**Perchlorate Material—special handling may apply.** See http://www.dtsc.ca.gov/hazardouswaste/perchlorate.
For Customers in the U.S.A.
Tested To Comply With FCC Standards
FOR HOME OR OFFICE USE

FCC
Contains IC: 7736B-02000002
Contains FCC ID: W2Z-W20000002

FCC Statement: This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

CAUTION: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

FCC Caution: Any changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate this equipment.

Radiation Exposure Statement: This device meets the government's requirements for exposure to radio waves. This device is designed and manufactured not to exceed the emission limits for exposure to radio frequency (RF) energy set by the Federal Communications Commission of the U.S. Government. The exposure standard for wireless device employs a unit of measurement known as the Specific Absorption Rate, or SAR. The SAR limit set by the FCC is 1.6W/kg. *Tests for SAR are conducted using standard operating positions accepted by the FCC with the device transmitting at its highest certified power level in all tested frequency bands.

Notes on the Grant: To comply with Part 15 of the FCC Rules, this product must be used with a Fujifilm-specified ferrite-core A/V cable, USB cable, and DC supply cord.

A lithium ion battery that is recyclable powers the product you have purchased. Please call 1-800-8-BATTERY for information on how to recycle this battery.

For Customers in Canada
CAN ICES-3 (B)/NMB-3(B)
CAUTION: This Class B digital apparatus complies with Canadian ICES-003.

Industry Canada statement: This device complies with RSS-210 of the Industry Canada Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

This device and its antenna(s) must not be co-located or operating in conjunction with any other antenna or transmitter, except tested built-in radios. The County Code Selection feature is disabled for products marketed in the US/ Canada.

Radiation Exposure Statement: The product comply with the Canada portable RF exposure limit set forth for an uncontrolled environment and are safe for intended operation as described in this manual. The further RF exposure reduction can be achieved if the product can be kept as far as possible from the user body or set the device to lower output power if such function is available.

Disposal of Electrical and Electronic Equipment in Private Households

For Your Safety

Be sure to read these notes before use

Safety Notes

Thank you for your purchase of this product. For repair, inspection, and internal testing, contact your FUJIFILM dealer.

- Make sure that you use the lens correctly. Read these safety notes and the camera Owner's Manual carefully before use.
- After reading these safety notes, store them in a safe place.

About the Icons

The icons shown below are used in this document to indicate the severity of the injury or damage that can result if the information indicated by the icon is ignored and the product is used incorrectly as a result.

⚠️ WARNING
This icon indicates that death or serious injury can result if the information is ignored.

⚠️ CAUTION
This icon indicates that personal injury or material damage can result if the information is ignored.

The icons shown below are used to indicate the nature of the instructions which are to be observed.

⚠️ Triangular icons tell you that this information requires attention ("Important").

🚫 Circular icons with a diagonal bar tell you that the action indicated is prohibited ("Prohibited").

⚠️ Filled circles with an exclamation mark indicate an action that must be performed ("Required").

⚠️ WARNING
Do not use in the bathroom or shower. Failure to observe this precaution can cause a fire or electric shock.

🚫 Do not disassemble (do not open the case). Failure to observe this precaution can cause fire, electric shock, or injury due to product malfunction.

⚠️ Should the case break open as the result of a fall or other accident, do not touch the exposed parts. Failure to observe this precaution could result in electric shock or injury from touching the damaged parts. Remove the camera battery immediately, taking care to avoid injury or electric shock, and take the product to the point of purchase for consultation.

⚠️ Do not immerse in or expose to water. Failure to observe this precaution can cause a fire or electric shock.

🚫 Do not disassemble (do not open the case). Failure to observe this precaution can cause fire, electric shock, or injury due to product malfunction.

⚠️ Keep out of the reach of small children. This product could cause injury in the hands of a child.

🚫 Do not handle with wet hands. Failure to observe this precaution can cause electric shock.

⚠️ Keep the sun out of the frame when shooting backlit subjects. Sunlight focused into the camera when the sun is in or close to the frame can cause fire or burns.

🚫 When the product is not in use, replace the lens caps and store out of direct sunlight. Sunlight focused by the lens can cause fire or burns.

🚫 Do not carry the camera or lens while they are attached to a tripod. The product can fall or strike other objects, causing injury.
For Your Safety

European Union regulatory notice

This product complies with the following EU Directives:
- Low Voltage Directive 2006/95/EC
- EMC Directive 2004/108/EC
- R & TTE Directive 1999/5/EC

Compliance with these directives implies conformity to applicable harmonized European standards (European Norms) which are listed on the EU Declaration of Conformity issued by FUJIFILM Corporation for this product or product family. This compliance is indicated by the following conformity marking placed on the product:

This marking is valid for non-Telecom products and EU harmonized Telecom products (e.g. Bluetooth).

Regarding the Declaration of Conformity, visit http://www.fujifilm.com/products/digital_cameras/x/fujifilm_x_t1/pdf/index/fujifilm_x_t1_cod.pdf.

IMPORTANT: Read the following notices before using the camera's built-in wireless transmitter.

- **Use only as part of a wireless network.** FUJIFILM does not accept liability for damages resulting from unauthorized use. Do not use in applications requiring a high degree of reliability, for example in medical devices or other systems that may directly or indirectly impact human life. When using the device in computer and other systems that demand a greater degree of reliability than wireless networks, be sure to take all necessary precautions to ensure safety and prevent malfunction.

- **Use only in the country in which the device was purchased.** This device conforms to regulations governing wireless network devices in the country in which it was purchased. Observe all location regulations when using the device. FUJIFILM does not accept liability for problems arising from use in other jurisdictions.

- **Wireless data (images) may be intercepted by third parties.** The security of data transmitted over wireless networks is not guaranteed.

- **Do not use the device in locations subject to magnetic fields, static electricity, or radio interference.** Do not use the transmitter in the vicinity of microwave ovens or in other locations subject to magnetic fields, static electricity, or radio interference that may prevent reception of wireless signals. Mutual interference may occur when the transmitter is used in the vicinity of other wireless devices operating in the 2.4 GHz band.

- **The wireless transmitter operates in the 2.4 GHz band using DSSS and OFDM modulation.**

Wireless Network Devices: Cautions

- **This device operates on the same frequency as commercial, educational, and medical devices and wireless transmitters.** It also operates on the same frequency as licensed transmitters and special unlicensed low-voltage transmitters used in RFID tracking systems for assembly lines and in other similar applications.

- **To prevent interference with the above devices, observe the following precautions.** Confirm that the RFID transmitter is not in operation before using this device. Should you observe that the device causes interference in licensed transmitters used for RFID tracking, immediately choose a new operating frequency for this device to prevent additional interference. If you notice that this device causes interference in low-voltage RFID tracing systems, contact a FUJIFILM representative.

This sticker indicates that this device operates in the 2.4 GHz band using DSSS and OFDM modulation and may cause interference at distances of up to 40 m.
About This Manual

Before using the camera, read this manual and the warnings in “For Your Safety” (ii). For information on specific topics, consult the sources below.

**Table of Contents** .................................................. xii
The “Table of Contents” gives an overview of the entire manual. The principal camera operations are listed here.

**Troubleshooting** .................................................... 117
Having a specific problem with the camera? Find the answer here.

**Warning Messages and Displays** ......................... 122
Find out what’s behind that flashing icon or error message in the display.

**Memory Cards**
Pictures are stored on optional SD, SDHC, and SDXC memory cards (16), referred to in this manual as “memory cards.”
# Product Care

**Camera body:** For continued enjoyment of your camera, use a soft, dry cloth to clean the camera body after each use. Do not use alcohol, thinner, or other volatile chemicals, which could discolor or deform the leather on the camera body. Any liquid on the camera should be removed immediately with a soft, dry cloth. Use a blower to remove dust from the monitor, taking care to avoid scratches, and then gently wipe with a soft, dry cloth. Any remaining stains can be removed by wiping gently with a piece of FUJIFILM lens-cleaning paper to which a small amount of lens-cleaning fluid has been applied. To prevent dust entering the camera, replace the body cap when no lens is in place.

**Image sensor:** Dust can be removed from the image sensor using the SENSOR CLEANING option in the setup menu (92).

**Interchangeable lenses:** Use a blower to remove dust, then gently wipe with a soft, dry cloth. Any remaining stains can be removed by wiping gently with a piece of FUJIFILM lens-cleaning paper to which a small amount of lens-cleaning fluid has been applied. Replace the front and rear caps when the lens is not use.

Symbols and Conventions

The following symbols are used in this manual:

- This information should be read before use to ensure correct operation.
- Additional information that may be helpful when using the camera.
- Other pages in this manual on which related information may be found.

Menus and other text in the displays are shown in bold. In the illustrations in this manual, displays may be simplified for explanatory purposes.

Supplied Accessories

The following items are included with the camera:

- NP-W126 rechargeable battery
- BC-W126 battery charger
- Body cap
- EF-X8 shoe-mounted flash unit
- Protective covers (× 2)
- Shoulder strap
- Hot shoe cover (comes attached to hot shoe)
- Vertical battery grip connector cover
- CD-ROM
- Owner’s Manual (this manual)

If you purchased a lens kit, check that a lens is included.
Parts of the Camera

For more information, refer to the page listed to the right of each item.

The LCD Monitor

The LCD monitor can be tilted for easier viewing, but be careful not to touch the wires or trap fingers or other objects behind the monitor. Touching the wires could cause camera malfunction.

* For quick access to custom settings banks (P 71), press and hold while quick menu for still images (P 34) is displayed.

Control Lock

To prevent accidental operation of the selector and Q buttons during shooting, press MENU/OK until X is displayed. The controls can be unlocked by pressing MENU/OK until X is no longer displayed.
**The Selector**
Press the selector up (②), right (④), down (⑤), or left (③) to highlight items and press **MENU/OK** (①) to select. The up, left, right, and down buttons also double as the Fn3, Fn4, Fn5, and Fn6 buttons, respectively (39, 41, 42, 43, 45).

---

**The Indicator Lamp**
When the viewfinder is not in use (19), the indicator lamp shows camera status.

<table>
<thead>
<tr>
<th>Indicator lamp</th>

**Lenses**

The camera can be used with lenses for the FUJIFILM X-mount.

### Parts of the Lens

1. Lens hood
2. Mounting marks
3. Focus ring
4. Zoom ring
5. Aperture ring
6. O.I.S. switch
7. Aperture mode switch
8. Lens signal contacts
9. Front lens cap
10. Rear lens cap

### Removing the Caps

Remove the caps as shown.

- Lens caps may differ from those shown.

### Attaching the Hood

When attached, lens hoods reduce glare and protect the front lens element.
**Lenses with Aperture Rings**

At settings other than A, you can adjust aperture by rotating the lens aperture ring (exposure modes A and M).

**The Aperture Mode Switch**

If the lens has an aperture mode switch, aperture can be adjusted manually by sliding the switch to Z and rotating the aperture ring.

**Lenses with No Aperture Rings**

The method used to adjust aperture can be selected using the APERTURE SETTING option (P 82) in the shooting menu. When an option other than AUTO is selected, aperture can be adjusted using the rear command dial.

Aperture control defaults to the rear command dial, but can be reassigned to the front command dial using the COMMAND DIAL SETTING option in the setup menu.
**Lenses with O.I.S. Switches**

If the lens supports optical image stabilization (O.I.S.), the image stabilization mode can be chosen in the camera menus. To activate image stabilization, slide the O.I.S. switch to **ON**.

---

**Manual Focus Lenses**

Slide the focus ring to the front for autofocus.

For manual focus, slide the focus ring to the back and rotate it while checking the results in the camera display. The focus distance and depth-of-field indicators can be used to assist manual focus. Note that manual focus may not be available in all shooting modes.

---

**The Depth-of-Field Indicator**

The depth-of-field indicator shows the approximate depth of field (the distance in front of and behind the focus point that appears to be in focus).

☆ The camera does not display the focus distance when the lens is in manual focus mode.
First Steps

Attaching the Strap

Attach the strap clips to the camera and then attach the strap.

1 Open a strap clip.
Use the clip attaching tool to open a strap clip, making sure that the tool and clip are in the orientations shown.

Keep the tool in a safe place. You will need it to open the strap clips when removing the strap.

2 Place the strap clip on an eyelet.
Hook the strap eyelet in the clip opening. Remove the tool, using the other hand to keep the clip in place.

3 Pass the clip through the eyelet.
Rotate the clip fully through the eyelet until it clicks closed.

4 Attach a protective cover.
Place a protective cover over the eyelet as shown, with the black side of the cover toward the camera. Repeat Steps 1–4 for the second eyelet.
5 Insert the strap.
Insert the strap through a protective cover and strap clip.

6 Fasten the strap.
Fasten the strap as shown. Repeat Steps 5–6 for the second eyelet.

⚠️ To avoid dropping the camera, be sure the strap is correctly secured.
Attaching a Lens

Lenses attach as described below.

- Care is required to prevent dust entering the camera while attaching and removing lenses.

1 Remove the body and rear caps.
   Remove the body cap from the camera and the rear cap from the lens.

   - Do not touch the camera’s internal parts.

2 Attach the lens.
   Place the lens on mount, keeping the marks on the lens and camera aligned, and then rotate the lens until it clicks into place.

   - Do not press the lens release button while attaching the lens.

- Removing Lenses
  To remove the lens, turn the camera off, then press the lens release button and rotate the lens as shown.

  - To prevent dust accumulating on the lens or inside the camera, replace the lens caps and camera body cap when the lens is not attached.

- Lenses and Other Optional Accessories
  The camera can be used with lenses for the FUJIFILM X-mount and the other accessories listed from page 109.
### Charging the Battery

The battery is not charged at shipment. Before use, charge the battery in the supplied battery charger.

1. **Place the battery in the charger.**
   Place the battery in the supplied battery charger as shown.

   ![Battery Charger Diagram](image)

   The camera uses an NP-W126 rechargeable battery.

   - The supplied AC cord is for use exclusively with the supplied battery charger. Do not use the supplied charger with other cords or the supplied cord with other devices.

2. **Plug the charger in.**
   Plug the charger into an indoor power outlet. The charging indicator will light.

   ![Charging Indicator Diagram](image)

   **The Charging Indicator**
   The charging indicator shows battery charge status as follows:

<table>
<thead>
<tr>
<th>Charging indicator</th>
<th>Battery status</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>Off</td>
<td>Battery not inserted.</td>
<td>Insert the battery.</td>
</tr>
<tr>
<td>On</td>
<td>Battery fully charged.</td>
<td>Remove the battery.</td>
</tr>
<tr>
<td>Blinks</td>
<td>Battery fault.</td>
<td>Unplug the charger and remove the battery.</td>
</tr>
</tbody>
</table>

3. **Charge the battery.**
   Remove the battery when charging is complete. See the specifications (P 129) for charging times (note that charging times increase at low temperatures).

   - Unplug the charger when it is not in use.
Inserting the Battery

After charging the battery, insert the battery as described below.

1 Open the battery-chamber cover.
   Slide the battery-chamber latch as shown and open the battery-chamber cover.

   ! Do not open the battery-chamber cover when the camera is on. Failure to observe this precaution could damage image files or memory cards.
   ! Do not use excessive force when handling the battery-chamber cover.

2 Insert the battery.
   Using the battery to keep the battery latch pressed to one side, insert the battery contacts first in the direction shown by the arrow. Confirm that the battery is securely latched.

   ! Insert the battery in the orientation shown. Do not use force or attempt to insert the battery upside down or backwards. The battery will slide in easily in the correct orientation.

3 Close the battery-chamber cover.

Removing the Battery

Before removing the battery, turn the camera off and open the battery-chamber cover. Press the battery latch to the side, and slide the battery out of the camera as shown.
Inserting a Memory Card

The camera has no internal memory; instead, pictures are stored on optional SD, SDHC, and SDXC memory cards (sold separately). Memory cards are inserted as described below.

1 Open the memory card slot cover.
   Turn the camera off and open the memory card slot cover.

2 Insert the memory card.
   Holding the memory card in the orientation shown, slide it in until it clicks into place at the back of the slot.

3 Close the memory card slot cover.

Be sure card is in the correct orientation; do not insert at an angle or use force.

Removing the Memory Card

Before removing the memory card, turn the camera off and open the memory card slot cover. Press the card in and release it slowly. The card can then be removed by hand. When a memory card is removed, the card could be ejected too quickly. Use your finger to hold it and gently release the card.
Compatible Memory Cards

FUJIFILM and SanDisk SD, SDHC, and SDXC memory cards have been approved for use in the camera. A complete list of approved memory cards is available at http://www.fujifilm.com/support/digital_cameras/compatibility/. Operation is not guaranteed with other cards. The camera cannot be used with xD-Picture Cards or MultiMediaCard (MMC) devices.

Memory Cards

- Do not turn the camera off or remove the memory card while the memory card is being formatted or data are being recorded to or deleted from the card. Failure to observe this precaution could damage the card.
- SD/SDHC/SDXC memory cards can be locked, making it impossible to format the card or to record or delete images. Before inserting a memory card, slide the write-protect switch to the unlocked position.

- Format memory cards before first use, and be sure to reformat all memory cards after using them in a computer or other device. For more information on formatting memory cards, see page 94.
- Memory cards are small and can be swallowed; keep out of reach of children. If a child swallows a memory card, seek medical assistance immediately.
- miniSD or microSD adapters that are larger or smaller than the standard dimensions of an SD/SDHC/SDXC card may not eject normally; if the card does not eject, take the camera to an authorized service representative. Do not forcibly remove the card.
- Do not affix labels to memory cards. Peeling labels can cause camera malfunction.
- Movie recording may be interrupted with some types of SD/SDHC/SDXC memory card. Use a CLASS® card or better for movies and burst photography.
- Formatting a memory card in the camera creates a folder in which pictures are stored. Do not rename or delete this folder or use a computer or other device to edit, delete, or rename image files. Always use the camera to delete pictures; before editing or renaming files, copy them to a computer and edit or rename the copies, not the originals. Renaming the files on the camera can cause problems during playback.
Turning the Camera on and Off

Rotate the ON/OFF switch to ON to turn the camera on. Select OFF to turn the camera off.

Press the button to start playback. Press the shutter button halfway to return to shooting mode.

The camera will turn off automatically if no operations are performed for the length of time selected for POWER MANAGEMENT > AUTO POWER OFF (92). To reactivate the camera after it has turned off automatically, press the shutter button halfway or turn the ON/OFF switch to OFF and then back to ON.

For information on startup options, see page 92.

Fingerprints and other marks on the lens or viewfinder can affect pictures or the view through the viewfinder. Keep the lens and viewfinder clean.

Battery Level

After turning the camera on, check the battery level in the display.

<table>
<thead>
<tr>
<th>Indicator</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>(white)</td>
<td>Battery partially discharged.</td>
</tr>
<tr>
<td>(white)</td>
<td>Battery more than half discharged</td>
</tr>
<tr>
<td>(red)</td>
<td>Low battery. Charge as soon as possible.</td>
</tr>
<tr>
<td>(blinks red)</td>
<td>Battery exhausted. Turn camera off and recharge battery.</td>
</tr>
</tbody>
</table>
Basic Setup

A language-selection dialog is displayed the first time the camera is turned on. Set up the camera as described below (you can reset the clock or change languages at any time using the DATE/TIME or 言語/LANG. options in the setup menu; for information on displaying the setup menu, see page 89).

1 Choose a language.

Highlight a language and press MENU/OK.

Press DISP/BACK to skip the current step. Any steps you skip will be displayed the next time the camera is turned on.

2 Set the date and time.

Press the selector left or right to highlight the year, month, day, hour, or minute and press up or down to change. To change the order in which the year, month, and day are displayed, highlight the date format and press the selector up or down. Press MENU/OK to exit to shooting mode when settings are complete.

If the battery is removed for an extended period, the camera clock will be reset and the language-selection dialog will be displayed when the camera is turned on.
Display Settings

The camera is equipped with an electronic viewfinder (EVF) and an LCD monitor (LCD).

**Choosing a Display**

Press the **VIEW MODE** button to cycle through displays as shown below.

- **EYE SENSOR**: Automatic display selection using eye sensor
- **EVF ONLY**: Viewfinder only
- **EVF ONLY + EYE SENSOR**: Viewfinder only; eye sensor turns display on or off
- **LCD ONLY**: LCD monitor only

**The Eye Sensor**

The eye sensor turns the viewfinder on when you put your eye to the viewfinder and turns it off when you take your eye away (note that the eye sensor may respond to objects other than your eye or to light shining directly on the sensor). If automatic display selection is enabled, the LCD monitor will turn on when the viewfinder turns off.
Display Settings

**The Viewfinder Display**
When **ON** is selected for [SCREEN SET-UP > EVF AUTORotate DISPLAYS](#) in the setup menu (90), the indicators in the viewfinder automatically rotate to match camera orientation.

> Orientation changed from “wide” to “tall”

- The display in the LCD monitor is unaffected.

**Focusing the Viewfinder**
The camera is equipped with diopter adjustment in the range –4 to +2 m⁻¹ to accommodate individual differences in vision. Rotate the diopter adjustment control until the viewfinder display is in sharp focus.

[Dioptr adjustment control]

**Adjusting Display Brightness**
The brightness of the viewfinder and LCD monitor can be adjusted using the [SCREEN SET-UP > EVF/LCD BRIGHTNESS](#) option in the setup menu.
The DISP/BACK Button

The **DISP/BACK** button controls the display of indicators in the viewfinder and LCD monitor.

- **Viewfinder: Shooting**
  - Full
  - Normal

- **LCD Monitor: Shooting**
  - Info display
  - Standard
  - Custom
  - Information off

⚠️ In addition, a dual display is available in manual focus mode (63).
Custom Display

To choose items for display in the viewfinder and for the custom (and in manual focus mode, dual) display options in the monitor (P 21):

1. Select DISP. CUSTOM SETTING.
   - Select SCREEN SET-UP > DISP. CUSTOM SETTING in the setup menu.

2. Choose items.
   - Highlight items and press MENU/OK to select or deselect.
     - Framing grid (P 91)
     - Virtual horizon (see below)
     - Focus distance (autofocus)
     - Focus distance (manual focus)
     - Histogram
     - Exposure (aperture, shutter speed, and sensitivity)
     - Exposure compensation
     - Metering
     - Flash mode
     - White balance
     - Film simulation
     - Dynamic range
     - Number of exposures remaining/media
     - Image quality and size
     - Battery level

3. Exit.
   - Press DISP/BACK to exit when settings are complete.

⚠️ See page 5 for the locations of these items in the displays.

Virtual Horizon

Selecting ELECTRONIC LEVEL displays a virtual horizon. The camera is level when the two lines overlap.

⚠️ The virtual horizon may not be displayed if the camera lens is pointed up or down.

Basic Photography and Playback

Taking Photographs

This section describes how to take pictures using program AE (mode P). For information on S, A, and M modes, see page 46.

1 Adjust settings for program AE.

- **Shutter speed** ([46]: Select A (auto)
- **Sensitivity** ([50]: Select A (auto)
- **Drive mode** ([54]: Select S (single frame)
- **Focus mode** ([61]: Select S (single AF)
- **Aperture** ([46]: Select A (auto)
- **Metering** ([53]: Select [ ] (multi)

Confirm that P appears in the display.

- Image stabilization ([9]) is recommended.

The Q Button

The Q button can be used to view and adjust camera settings ([34]).
2 Ready the camera.
Hold the camera steady with both hands and brace your elbows against your sides. Shaking or unsteady hands can blur your shots.

To prevent pictures that are out of focus or too dark (underexposed), keep your fingers and other objects away from the lens, flash, and AF-assist illuminator.

3 Frame the picture.

4 Focus.
Frame the picture with your subject in the center of the display and press the shutter button halfway to focus.

- If the subject is poorly lit, the AF-assist illuminator may light (p. 78).

If the camera is able to focus, it will beep twice and focus area and focus indicator will glow green. Focus and exposure will lock while the shutter button is pressed halfway.

If the camera is unable to focus, the focus frame will turn red, !AF will be displayed, and the focus indicator will blink white. If the subject is close to the camera (the actual distance varies with the lens; for more information, see the lens manual), select macro mode and try again (p. 41).

5 Shoot.
Smoothly press the shutter button the rest of the way down to take the picture.
Viewing Pictures

Viewing Pictures Full Frame
Pictures can be viewed in the viewfinder or LCD monitor. When taking important pictures, take a test shot and check the results.

To view pictures full frame, press  

Additional pictures can be viewed by pressing the selector left or right or rotating the front command dial. Press the selector or rotate the dial right to view pictures in the order recorded, left to view pictures in reverse order. Keep the selector pressed to scroll rapidly to the desired frame.

Pictures taken using other cameras are indicated by a "gift image" icon during playback.

Favorites: Rating Pictures
To rate the current picture, press DISP/BACK and press the selector up and down to select from zero to five stars.
**Viewing Photo Information**

The photo information display changes each time the selector is pressed up.

Active focus point (“+”)

- Rotate the front command dial to view other images.

---

**Zooming in on the Focus Point**

Press the **FOCUS ASSIST** button to zoom in on the focus point. Press the button again to return to full-frame playback.
**Playback Zoom**

Rotate the rear command dial right to zoom in on the current picture, left to zoom out (to view multiple images, rotate the dial left when the picture is displayed full frame; § 29). When the picture is zoomed in, the selector can be used to view areas of the image not currently visible in the display. Press **DISP/BACK** or **MENU/OK** to exit zoom.

![Zoom indicator and Navigation window](image.png)

- The maximum zoom ratio varies with image size (§ 79). Playback zoom is not available with cropped or resized copies saved at a size of 640.
**Multi-Frame Playback**

To change the number of images displayed, rotate the rear command dial left when a picture is displayed full frame.

Use the selector to highlight images and press **MENU/OK** to view the highlighted image full frame (to zoom in on the selected image, rotate the rear command dial right when the picture is displayed full frame; 28). In the nine- and hundred-frame displays, press the selector up or down to view more pictures.
Deleting Pictures

To delete individual pictures, multiple selected pictures, or all pictures, press the \textit{\textbf{\textcolor{red}{\textbf{Erase}}}} button when a picture is displayed full frame and choose from the options below. Note that deleted pictures cannot be recovered. Copy important pictures to a computer or other storage device before proceeding.

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>FRAME</td>
<td>Press the selector left or right to scroll through pictures and press \textbf{MENU/OK} to delete the current picture (a confirmation dialog is not displayed).</td>
</tr>
<tr>
<td>SELECTED FRAMES</td>
<td>Highlight pictures and press \textbf{MENU/OK} to select or deselect (pictures in photobooks or print orders are shown by \textit{\textbf{S}}). When the operation is complete, press \textbf{DISP/BACK} to display a confirmation dialog, then highlight \textbf{OK} and press \textbf{MENU/OK} to delete the selected pictures.</td>
</tr>
<tr>
<td>ALL FRAMES</td>
<td>A confirmation dialog will be displayed; highlight \textbf{OK} and press \textbf{MENU/OK} to delete all unprotected pictures. Pressing \textbf{DISP/BACK} cancels deletion; note that any pictures deleted before the button was pressed can not be recovered.</td>
</tr>
</tbody>
</table>

- Protected pictures can not be deleted. Remove protection from any pictures you wish to delete (§ 84).
- Pictures can also be deleted by \textit{\textbf{\textcolor{red}{\textbf{Erase}}}} from playback menu.
- If a message appears stating that the selected images are part of a DPOF print order, press \textbf{MENU/OK} to delete the pictures.
Basic Movie Recording and Playback

Recording High-Definition (HD) Movies

The camera can be used to record short high-definition movies. Sound is recorded in stereo via the built-in microphone; do not cover the microphone during recording.

1. Press the movie-record button to start recording.

   Recording indicator

   Time remaining

2. Press the button again to end recording. Recording ends automatically when the maximum length is reached or the memory card is full.

   - Zoom can be adjusted while recording is in progress.
   - Frame size and rate can be selected using the MOVIE SET-UP > MOVIE MODE option (82). Focus mode is selected using the focus mode selector (61); for continuous focus adjustment, select C, or choose S and enable Intelligent Face Detection (78). Intelligent Face Detection is not available in focus mode M.

   - During recording, exposure compensation can be adjusted by up to ±2 EV.
   - The indicator lamp lights while movies are being recorded.

   - The microphone may pick up lens noise and other sounds made by the camera during recording.
   - Vertical or horizontal streaks may appear in movies containing very bright subjects. This is normal and does not indicate a malfunction.

Depth of Field

Adjust aperture before recording begins. Choose low f-numbers to soften background details. The effect can be heightened by increasing the distance between your subject and the background.
**Using an External Microphone**

Sound can be recorded with external microphones. See the microphone manual for details; if the microphone jack is 3.5 mm in diameter, use a 3.5-to-2.5 mm adapter.

The dialog shown at right will be displayed when a microphone is connected to the microphone/remote release connector. Press **MENU/OK** and select **MIC/REMOTE RELEASE > MIC**.
Viewing Movies

During playback, movies are displayed as shown at right. The following operations can be performed while a movie is displayed:

<table>
<thead>
<tr>
<th>Operation</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Start/pause playback</td>
<td><strong>Press the selector down</strong> to start playback. Press again to pause. While playback is paused, you can press the selector left or right to rewind or advance one frame at a time.</td>
</tr>
<tr>
<td>End playback</td>
<td><strong>Press the selector up</strong> to end playback.</td>
</tr>
<tr>
<td>Adjust speed</td>
<td><strong>Press the selector left or right</strong> to adjust playback speed during playback.</td>
</tr>
</tbody>
</table>
| Adjust volume              | **Press MENU/OK** to pause playback and display volume controls. Press the selector up or down to adjust the volume; press MENU/OK again to resume playback. Volume can also be adjusted using the  
                            SOUND SET-UP > PLAYBACK VOLUME option in the playback menu (90).                                                                        |

Progress is shown in the display during playback.

① Do not cover the speaker during playback.
② Sound is not played back in silent mode.

**Playback Speed**

**Press the selector left or right** to adjust playback speed during playback. Speed is shown by the number of arrows (▶ or ◄).
The Q (Quick Menu) Button

Press Q for quick access to the following items. For more information on the options available, see the pages listed below.

1. SELECT CUSTOM SETTING ............................................ 71
2. AF MODE ....................................................................... 78
3. DYNAMIC RANGE .......................................................... 79
4. WHITE BALANCE ............................................................. 43
5. NOISE REDUCTION .......................................................... 80
6. IMAGE SIZE ..................................................................... 79
7. IMAGE QUALITY .............................................................. 109
8. FILM SIMULATION ........................................................... 42
9. HIGHLIGHT TONE ........................................................... 80
10. SHADOW TONE ............................................................. 80
11. COLOR .......................................................................... 109
12. SHARPNESS ................................................................... 80
13. SELF-TIMER ................................................................... 35
14. FACE DETECTION ........................................................... 38
15. FLASH MODE ................................................................. 36
16. EVF/LCD BRIGHTNESS .................................................. 90

CUSTOM and COLOR TEMPERATURE white balance options can not be accessed using the Q button. Use a function button or the shooting menu.

1. Press Q to display the quick menu during shooting.

2. Use the selector to highlight items and rotate the rear command dial to change.

3. Press Q to exit when settings are complete.
Using the Q Button

This section describes the shooting options that can be accessed using the Q button.

The Self-Timer

Use the timer for self-portraits or to prevent blur caused by camera shake.

1. Highlight SELF-TIMER in the quick menu (P 34) and rotate the rear command dial to select from the options below. Press the Q button to proceed.

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>2 SEC</td>
<td>The shutter is released two seconds after the shutter button is pressed. Use to reduce blur caused by the camera moving when the shutter button is pressed.</td>
</tr>
<tr>
<td>10 SEC</td>
<td>The shutter is released ten seconds after the shutter button is pressed. Use for photographs in which you wish to appear yourself.</td>
</tr>
<tr>
<td>OFF</td>
<td>Self-timer off.</td>
</tr>
</tbody>
</table>

- Self-timer options can also be accessed from the shooting menu (P 79).

2. Press the shutter button halfway to focus.

3. Press the shutter button the rest of the way down to start the timer. The display in the monitor shows the number of seconds remaining until the shutter is released. To stop the timer before the picture is taken, press DISP/BACK.

The self-timer lamp on the front of the camera will blink immediately before the picture is taken. If the two-second timer is selected, the self-timer lamp will blink as the timer counts down.

- The self-timer turns off automatically when the camera is turned off.
**Flash Photography**

Use shoe-mounted flash units for additional lighting at night or indoors under low light.

1. Remove the hot shoe cover and slide the flash onto the hot shoe as shown, stopping when it clicks into place.

   - **Optional Flash Units**
     
     The camera can be used with optional FUJIFILM shoe-mounted flash units (p. 112). Do not use third-party flash units that apply over 300V to the camera hot shoe.

   - **The Sync Terminal**
     
     Use the sync terminal to connect flash units that require a sync cable.

   - **Removing the Flash**
     
     Flash units mounted on the hot shoe can be removed by lowering the flash and pressing the **PUSH** button while sliding the unit from the shoe.

2. Raise the flash.
Highlight \( \mathbf{Q} \) **FLASH MODE** in the quick menu (\#34) and rotate the rear command dial to select from the options below. Press the \( \mathbf{Q} \) button to proceed.

<table>
<thead>
<tr>
<th>Mode</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>( \mathbf{Q} ) (AUTO FLASH)/ (RED EYE REDUCTION) *</td>
<td>The flash fires when required. This option is available in program AE (mode ( \mathbf{P} )) only.</td>
</tr>
<tr>
<td>( \mathbf{Q} ) (FORCED FLASH)/ (FORCED FLASH) *</td>
<td>The flash fires whenever a picture is taken. Use for backlit subjects or for natural coloration when shooting in bright light.</td>
</tr>
<tr>
<td>( \mathbf{Q} ) (SLOW SYNCHRO)/ (RED EYE &amp; SLOW) *</td>
<td>Capture both the main subject and the background under low light (note that brightly lit scenes may be overexposed).</td>
</tr>
<tr>
<td>( \mathbf{Q} ) (2ND CURTAIN SYNC.)/ (2ND CURTAIN SYNC.) *</td>
<td>The flash fires immediately before the shutter closes.</td>
</tr>
<tr>
<td>( \mathbf{Q} ) (COMMANDER)</td>
<td>A flash mounted on the hot shoe can be used to control optional remote flash units.</td>
</tr>
<tr>
<td>( \mathbf{Q} ) (SUPPRESSED FLASH)</td>
<td>The flash does not fire even when the subject is poorly lit. A tripod is recommended.</td>
</tr>
</tbody>
</table>

* Red-eye removal is available in these modes when Intelligent Face Detection is active (\#78) and red-eye removal is on (\#81). Red-eye removal minimizes “red-eye” caused when light from the flash is reflected from the subject’s retinas as shown in the illustration at right.

Flash options can also be accessed from the shooting menu (\#81).

- Depending on the distance to the subject, some lenses may cast shadows in photos taken with the flash.
- Turn off or lower the flash where flash photography is prohibited or to capture natural lighting under dim light.
- If \( \mathbf{Q} \) is displayed when the shutter button is pressed halfway, the flash will fire when the photo is taken.
- Except in commander mode, the flash may fire several times with each shot. Do not move the camera until shooting is complete.

**Flash Sync Speed**
The flash will synchronize with the shutter at shutter speeds of \( \frac{1}{80} \) s or slower.
**Intelligent Face Detection**

Intelligent Face Detection sets focus and exposure for human faces anywhere in the frame, preventing the camera from focusing on the background in group portraits. Choose for shots that emphasize portrait subjects.

To use Intelligent Face Detection, highlight `FACE DETECTION` in the quick menu (P 35), then rotate the rear command dial until ON is displayed and press the Q button. Faces can be detected with the camera in vertical or horizontal orientation; if a face is detected, it will be indicated by a green border. If there is more than one face in the frame, the camera will select the face closest to the center; other faces are indicated by white borders.

1. In some modes, the camera may set exposure for the frame as a whole rather than the portrait subject.
2. If the subject moves as the shutter button is pressed, their face may not be in the area indicated by the green border when the picture is taken.

Intelligent face detection can also be accessed using the `AUTOFOCUS SETTING > FACE DETECTION` option in the shooting menu (P 78).
The Fn (Function) Buttons

The roles played by the six function buttons can be selected in the setup menu (P 91) or by pressing and holding the DISP/BACK button and choosing a button from the menu shown at right. The options available include bracketing and advanced filters (P 40), macro mode (P 41), depth-of-field preview (P 48), auto sensitivity control (P 50), the self-timer (P 35), image size (P 79), image quality (P 109), dynamic range (P 79), film simulation (P 42), white balance (P 43), AF mode (P 78), focus-frame selection (P 45), custom settings (P 71), Intelligent Face Detection (P 38), RAW/JPEG toggle (P 69), and aperture setting (P 82) and wireless (P 97) options. The default options are shown below:

- **Fn1 button**: Bracketing and advanced filters (P 40)
- **Fn2 button**: Wireless options (P 41)
- **Fn3 button**: Macro mode (P 41)
- **Fn4 button**: Film simulation (P 42)
- **Fn5 button**: White balance (P 43)
- **Fn6 button**: Focus-frame selection (P 45)

You can also display options for any of the function buttons by pressing and holding the button.
Default Roles

The following sections describe the default roles assigned to the Fn buttons.

Bracketing and Advanced Filters (Fn1)

Buttons assigned this role can be used to select bracketing or advanced filter options.

- Bracketing and advanced filter options can also be accessed from the shooting menu (P 77).

■ Bracketing

- Exposure (AE) bracketing
- ISO Sensitivity (ISO) bracketing
- Film simulation bracketing
- Dynamic range bracketing
- White balance bracketing

When the DRIVE dial is rotated to BKT, pressing the button displays bracketing options (P 54). Press the selector up or down to select a bracketing type; if applicable, you can then press the selector left or right to select a bracketing amount.

■ Advanced Filters

When the DRIVE dial is rotated to ADV, pressing the button displays advanced filter options (P 58). Press the selector up or down to select the desired filter.
**Wireless Options (Fn2)**
Press the function button in shooting mode to connect to a smartphone or tablet via Wi-Fi (97). Once a connection is established, you can control the camera from the phone or download location data.

- Wireless options can also be accessed from the shooting and playback menus (82, 83).

**Macro Mode (Fn3)**
To focus at short distances, press the function button and select **ON**. To exit macro mode, press the selector up and select **OFF**.

- The distances at which the camera will focus in macro mode vary with the lens. See the lens manual for details.
- Macro mode can also be accessed using the **AUTOFOCUS SETTING > MACRO** option in the shooting menu (78).
**Film Simulation (Fn4)**

Simulate the effects of different kinds of film, including black-and-white (with or without color filters). Press the function button to display the options shown below, then press the selector up or down to highlight an option and press **MENU/OK** to select.

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="PROVIA" alt="STANDARD" /></td>
<td>Standard color reproduction. Suited to a wide range of subjects, from portraits to landscapes.</td>
</tr>
<tr>
<td><img src="Velvia" alt="VIVID" /></td>
<td>A high-contrast palette of saturated colors, suited to nature photos.</td>
</tr>
<tr>
<td><img src="ASTIA" alt="SOFT" /></td>
<td>Enhances the range of hues available for skin tones in portraits while preserving the bright blues of daylight skies. Recommended for outdoor portrait photography.</td>
</tr>
<tr>
<td>![Hi](PRO Neg. Hi)</td>
<td>Offers slightly more contrast than ![Std](PRO Neg. Std). Recommended for outdoor portrait photography.</td>
</tr>
<tr>
<td>![Std](PRO Neg. Std)</td>
<td>A soft-toned palette. The range of hues available for skin tones is enhanced, making this a good choice for studio portrait photography.</td>
</tr>
<tr>
<td><img src="MONOCHROME" alt="MONOCHROME" /></td>
<td>Take pictures in standard black and white.</td>
</tr>
<tr>
<td>![Ye FILTER](MONOCHROME + Ye FILTER)</td>
<td>Take black-and-white pictures with slightly increased contrast. This setting also slightly tones down the brightness of the sky.</td>
</tr>
<tr>
<td>![R FILTER](MONOCHROME + R FILTER)</td>
<td>Take black-and-white pictures with increased contrast. This setting also tones down the brightness of the sky.</td>
</tr>
<tr>
<td>![G FILTER](MONOCHROME + G FILTER)</td>
<td>Soften skin tones in black-and-white portraits.</td>
</tr>
<tr>
<td><img src="SEPIA" alt="SEPIA" /></td>
<td>Take pictures in sepia.</td>
</tr>
</tbody>
</table>

Film simulation options can be combined with tone and sharpness settings (80).

Film simulation options can also be accessed from the shooting menu (109).
**White Balance (Fn5)**

For natural colors, press the function button to display the following options, then use the selector to highlight an option that matches the light source and press **MENU/OK**. The dialog shown at bottom right will be displayed; use the selector to fine-tune white balance or press **DISP/BACK** to exit without fine-tuning.

<table>
<thead>

- White balance is adjusted for flash lighting only in **AUTO** and 🌡️ modes. Turn the flash off using other white balance options.
- Results vary with shooting conditions. Play pictures back after shooting to check colors.
- White balance options can also be accessed from the shooting menu (P 80).
### : Custom White Balance
Choose : to adjust white balance for unusual lighting conditions. White balance measurement options will be displayed; frame a white object so that it fills the display and press the shutter button all the way down to measure white balance (to select the most recent custom value and exit without measuring white balance, press DISP/BACK, or press MENU/OK to select the most recent value and display the fine-tuning dialog).

- If “COMPLETED!” is displayed, press MENU/OK to set white balance to the measured value.
- If “UNDER” is displayed, raise exposure compensation (52) and try again.
- If “OVER” is displayed, lower exposure compensation (52) and try again.

### : Color Temperature
Color temperature is an objective measure of the color of a light source, expressed in Kelvin (K). Light sources with a color temperature close to that of direct sunlight appear white; light sources with a lower color temperature have a yellow or red cast, while those with a higher color temperature are tinged with blue. You can match color temperature to the light source as shown in the following table, or choose options that differ sharply from the color of the light source to make pictures “warmer” or “colder.”

<table>
<thead>
<tr>

</tbody>
</table>
**Focus-Frame Selection (Fn6)**

The camera offers a choice of focus points, allowing photographs to be composed with the main subject positioned almost anywhere in the frame.

In focus modes **S** and **C**, focus-area selection is only available when **AREA** is selected for **AF MODE** in the shooting menu and Intelligent Face Detection (P 38) is off.

To position the focus frame, press the function button and then press the selector up, down, left, or right (the focus frame can be returned to the center by pressing **DISP/BACK**). Press **MENU/OK** to put the setting into effect. In manual focus mode, you can also select the focus point using the function button.

In focus modes **S** and **C**, you can choose the size of the focus frame by pressing the function button and rotating the rear command dial. Rotate the dial left to reduce the frame by up to 50%, right to enlarge it by up to 150%, or press the **FOCUS ASSIST** button to restore the frame to its original size. Press **MENU/OK** to put the setting into effect.

Focus-area selection can also be accessed using the **AUTOFOCUS SETTING** option in the shooting menu (P 78).
Choosing an Exposure Mode

The camera offers a choice of program AE (P), shutter-priority AE (S), aperture-priority AE (A), and manual exposure (M) modes.

**Program AE (P)**

To allow the camera to adjust both shutter speed and aperture for optimal exposure, set shutter speed and aperture to A. P will appear in the display.

If the subject is outside the metering range of the camera, the shutter speed and aperture displays will show “– – –”.

**Program Shift**

If desired, you can rotate the front command dial to select other combinations of shutter speed and aperture without altering exposure (program shift). The new values for shutter speed and aperture are shown in yellow. Program shift is not available if the attached flash supports TTL auto, AUTO is selected for DYNAMIC RANGE in the shooting menu (79), or the sensitivity dial is rotated to A (50). To cancel program shift, turn the camera off.
**Shutter-Priority AE (S)**

To adjust shutter speed manually while letting the camera select aperture for optimal exposure, set aperture to A and use the shutter speed dial (if A is currently selected for shutter speed, press the dial lock release while rotating the shutter speed dial). S will appear in the display.

- At settings other than 180X, shutter speed can also be adjusted in increments of 1/3 EV by rotating the front command dial. Shutter speed can be adjusted even while the shutter button is pressed halfway.

- If the correct exposure cannot be achieved at the selected shutter speed, aperture will be displayed in red when the shutter button is pressed halfway. Adjust shutter speed until the correct exposure is achieved.

- If the subject is outside the metering range of the camera, the aperture display will show “–––”.

**Sensitivity and Depth of Field**

If you choose a fast shutter speed when the subject is poorly lit, the camera autoexposure program will select a wider aperture. This will produce the correct exposure but may also reduce depth of field so that less of the area behind and in front of your subject appears to be in focus (see the top illustration at right). To stop aperture down and increase depth of field as shown in the second of the two illustrations at right, select a higher sensitivity.
Choosing an Exposure Mode

**Aperture-Priority AE (A)**
To adjust aperture manually while letting the camera select shutter speed for optimal exposure, rotate the shutter speed dial to A and adjust aperture as desired. A will appear in the display.

- Aperture can be adjusted even while the shutter button is pressed halfway.
- If the correct exposure can not be achieved at the selected aperture, the shutter speed will be displayed in red when the shutter button is pressed halfway. Adjust aperture until the correct exposure is achieved.
- If the subject is outside the metering range of the camera, the shutter speed display will show “–––”.

**Previewing Depth of Field**
When PREVIEW DEPTH OF FIELD is assigned to a function button (39), pressing the button stops aperture down to the selected setting, allowing depth of field to be previewed in the display.

**Sensitivity and Motion Blur**
If you choose a narrow aperture when the subject is poorly lit, the shutter speed selected by the autoexposure program may not be fast enough to prevent motion blur (see the top illustration at right). For faster shutter speeds that reduce motion blur as shown in the second of the two illustrations at right, select a higher sensitivity.
**Manual Exposure (M)**

Exposure can be altered from the value suggested by the camera by setting both shutter speed and aperture to values other than A (if A is currently selected for shutter speed, press the dial lock release while rotating the shutter speed dial). M will appear in the display.

- At settings other than 180X, shutter speed can also be adjusted in increments of ⅓ EV by rotating the front command dial.
- The manual exposure display includes an exposure indicator that shows the amount the picture would be under- or over-exposed at current settings.

**Exposure Preview**

To preview exposure in the LCD monitor, select ON for SCREEN SET-UP > PREVIEW EXP. IN MANUAL MODE. Select OFF when using the flash or on other occasions on which exposure may change when the picture is taken.
“Sensitivity” refers to the camera’s sensitivity to light. Sensitivity is adjusted by pressing the dial lock release and rotating the sensitivity dial; choose from values between 200 and 6400, or select L (100), H1 (defaults to 12800), or H2 (defaults to 25600) for special situations. Higher values can be used to reduce blur when lighting is poor, while lower values allow slower shutter speeds or wider apertures in bright light; note, however, that mottling may appear in pictures taken at high sensitivities, particularly at H2, while choosing L reduces dynamic range. Values of from ISO 200 to ISO 6400 are recommended in most situations. If A (auto) is selected, the camera will adjust sensitivity automatically in response to shooting conditions.

- RAW images can not be recorded at settings of L, H1, or H2. Only JPEG images will be recorded if these settings are chosen when RAW, FINE+RAW, or NORMAL+RAW is selected for image quality (79).
- The ISO DIAL SETTING option in the setup menu can be used to choose the sensitivity assigned to the H1 and H2 positions on the sensitivity dial (91). Choose from 12800, 25600, and 51200.
A (Auto)
The ISO ISO AUTO SETTING item in the shooting menu (78) controls how the camera adjusts sensitivity when A is selected. The camera automatically chooses a sensitivity between the default and maximum values; sensitivity is only raised above the default value if the shutter speed required for optimal exposure would be slower than the value selected for MIN. SHUTTER SPEED.

- If the value selected for DEFAULT SENSITIVITY is higher than that selected for MAX. SENSITIVITY, DEFAULT SENSITIVITY will be set to the value selected for MAX. SENSITIVITY.
- The camera may select shutter speeds slower than MIN. SHUTTER SPEED if pictures would still be underexposed at the value selected for MAX. SENSITIVITY.

<table>

</tbody>
</table>
Exposure Compensation

Rotate the exposure compensation dial to adjust exposure when photographing very bright, very dark, or high-contrast subjects. The effect is visible in the display.

Exposure compensation indicator

Exposure Value (EV)

The exposure value is determined by sensitivity and by aperture and shutter speed, which control the amount of light to which the sensor is exposed. Doubling either the sensitivity or the amount of light increases EV by one, while halving it reduces EV by one.

Choosing an Exposure Compensation Value

- Backlit subjects: Choose values from +2/3 EV to +1 1/3 EV.
- Highly reflective subjects or very bright scenes (e.g., snowfields): +1 EV
- Scenes that are mostly sky: +1 EV
- Spotlit subjects (particularly if photographed against dark backgrounds): −2/3 EV
- Subjects with low reflectivity (pine trees or dark-colored foliage): −3/3 EV
## Metering

To choose how the camera meters exposure, rotate the metering dial to select from the following options.

<table>
<thead>
<tr>
<th>Mode</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><a href="MUL">MULTI</a></td>
<td>The camera instantly determines exposure based on an analysis of composition, color, and brightness distribution. Recommended in most situations.</td>
</tr>
<tr>
<td><a href="SPOT">SPOT</a></td>
<td>The camera meters lighting conditions in an area at the center of the frame equivalent to 2% of the total. Recommended with backlit subjects and in other cases in which the background is much brighter or darker than the main subject.</td>
</tr>
<tr>
<td><a href="AVG">AVERAGE</a></td>
<td>Exposure is set to the average for the entire frame. Provides consistent exposure across multiple shots with the same lighting, and is particularly effective for landscapes and portraits of subjects dressed in black or white.</td>
</tr>
</tbody>
</table>

⚠️ The selected option will only take effect when Intelligent Face Detection is off (38).
## The DRIVE Dial

The DRIVE dial gives you access to the following options.

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>BKT</td>
<td><strong>Bracketing</strong>: Automatically vary settings over a series of pictures (p. 54).</td>
</tr>
<tr>
<td>CH</td>
<td><strong>High-speed burst</strong>: Shoot photos in high-speed bursts (p. 56).</td>
</tr>
<tr>
<td>CL</td>
<td><strong>Low-speed burst</strong>: Shoot in low-speed bursts (p. 56).</td>
</tr>
<tr>
<td>S</td>
<td><strong>Single frame</strong>: Take photos one at a time.</td>
</tr>
<tr>
<td></td>
<td><strong>Multiple exposure</strong>: Create photos that combine two exposures (p. 57).</td>
</tr>
<tr>
<td>ADV.</td>
<td><strong>Advanced filter</strong>: Take photos with filter effects (p. 58).</td>
</tr>
<tr>
<td></td>
<td><strong>Panorama</strong>: Follow an on-screen guide to create panoramas (p. 59).</td>
</tr>
</tbody>
</table>

### Bracketing

Automatically vary settings over a series of pictures.

1. Rotate the DRIVE dial to BKT.
2 Select one of the following options using a function button (P 40; at default settings, bracketing program selection is assigned to the *Fn1* button) or the shooting menu (P 77).

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AE BKT</td>
<td>Select a bracketing amount. Each time the shutter button is pressed, the camera will take three shots: one using the metered value for exposure, the second overexposed by the selected amount, and the third underexposed by the same amount (regardless of the amount selected, exposure will not exceed the limits of the exposure metering system).</td>
</tr>
<tr>
<td>ISO BKT</td>
<td>Select a bracketing amount. Each time the shutter is released, the camera will take a picture at the current sensitivity (P 50) and process it to create two additional copies, one with sensitivity raised and the other with sensitivity lowered by the selected amount (regardless of the amount selected, sensitivity will not exceed ISO 6400 or fall below ISO 200).</td>
</tr>
<tr>
<td>FILM SIMULATION</td>
<td>Select a bracketing type. Each time the shutter is released, the camera takes one shot and processes it to create copies with the selected film simulation settings (P 42).</td>
</tr>
<tr>
<td>BKT DYNAMIC RANGE</td>
<td>Each time the shutter button is pressed, the camera takes three shots with different dynamic ranges (P 79): 100% for the first, 200% for the second, and 400% for the third. While dynamic range bracketing is in effect, sensitivity will be restricted to a minimum of ISO 800; the sensitivity previously in effect is restored when bracketing ends.</td>
</tr>
<tr>
<td>WHITE BALANCE BKT</td>
<td>Select a bracketing amount. Each time the shutter button is pressed, the camera takes three shots: one at the current white balanced setting, one with fine-tuning increased by the selected amount, and another with fine-tuning decreased by the selected amount.</td>
</tr>
</tbody>
</table>

3 Take photographs.
**Continuous Shooting (Burst Mode)**

Capture motion in a series of pictures.

1. Rotate the **DRIVE** dial to select **CH** (high-speed burst) or **CL** (low-speed burst).

![Drive Dial Illustration]

2. Take photographs. The camera will take pictures while the shutter button is pressed; shooting ends when the shutter button is released, the maximum number of pictures has been taken, or the memory card is full.

- Additional time may be required to record pictures when shooting ends.
- If file numbering reaches 999 before shooting is complete, the remaining pictures will be recorded to a new folder (p. 93).
- In some drive modes, shooting may not begin if the space available on the memory card is insufficient.

**Focus and Exposure**

To vary focus and exposure with each shot, select focus mode **C**; in other modes, focus and exposure are determined by the first shot in each series.

- When **CH** is selected, the camera focuses using the focus frames shown at right.
- Focus tracking performance varies with aperture, sensitivity, and shooting conditions.

![Focus and Exposure Illustration]
**Multiple Exposures**
Create a photograph that combines two exposures.

1 Rotate the **DRIVE** dial to ⚫.

2 Take the first shot.

3 Press **MENU/OK**. The first shot will be shown superimposed on the view through the lens and you will be prompted to take the second shot.

   - To return to Step 2 and retake the first shot, press the selector left. To save the first shot and exit without creating a multiple exposure, press **DISP/BACK**.

4 Take the second shot, using the first frame as a guide.

5 Press **MENU/OK** to create the multiple exposure, or press the selector left to return to Step 4 and retake the second shot.
**Advanced Filters**

Take photos with filter effects.

1. Rotate the DRIVE dial to **ADV**.

2. Select one of the following options using a function button (p. 40; at default settings, filter selection is assigned to the **Fn1** button) or the shooting menu (p. 77).

<table>
<thead>
<tr>
<th>Filter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>TOY CAMERA</strong></td>
<td>Choose for a retro toy camera effect.</td>
</tr>
<tr>
<td><strong>MINIATURE</strong></td>
<td>The tops and bottoms of pictures are blurred for a diorama effect.</td>
</tr>
<tr>
<td><strong>POP COLOR</strong></td>
<td>Create high-contrast images with saturated colors.</td>
</tr>
<tr>
<td><strong>HIGH-KEY</strong></td>
<td>Create bright, low-contrast images.</td>
</tr>
<tr>
<td><strong>LOW-KEY</strong></td>
<td>Create uniformly dark tones with few areas of emphasized highlights.</td>
</tr>
<tr>
<td><strong>DYNAMIC TONE</strong></td>
<td>Dynamic tone expression is used for a fantasy effect.</td>
</tr>
<tr>
<td><strong>SOFT FOCUS</strong></td>
<td>Create a look that is evenly soft throughout the whole image.</td>
</tr>
<tr>
<td><strong>PARTIAL COLOR (RED)</strong></td>
<td>Areas of the image that are the selected color are recorded in that color. All other areas of the image are recorded in black-and-white.</td>
</tr>
<tr>
<td><strong>PARTIAL COLOR (ORANGE)</strong></td>
<td></td>
</tr>
<tr>
<td><strong>PARTIAL COLOR (YELLOW)</strong></td>
<td></td>
</tr>
<tr>
<td><strong>PARTIAL COLOR (GREEN)</strong></td>
<td></td>
</tr>
<tr>
<td><strong>PARTIAL COLOR (BLUE)</strong></td>
<td></td>
</tr>
<tr>
<td><strong>PARTIAL COLOR (PURPLE)</strong></td>
<td></td>
</tr>
</tbody>
</table>

3. Take photographs.

- Depending on the subject and camera settings, images may in some cases be grainy or vary in brightness and hue.
Panoramas
Follow an on-screen guide to create a panorama.

1. Rotate the DRIVE dial to [ ].

2. To select the size of the angle through which you will pan the camera while shooting, press the selector left. Highlight a size and press MENU/OK.

3. Press the selector right to view a choice of pan directions. Highlight a pan direction and press MENU/OK.

4. Press the shutter button all the way down to start recording. There is no need to keep the shutter button pressed during recording.

5. Pan the camera in the direction shown by the arrow. Shooting ends automatically when the camera is panned to the end of the guides and the panorama is complete.

For Best Results
For best results, use a lens with a focal length of 35 mm or less (50 mm or less in 35 mm format). Prop your elbows against your sides and move the camera slowly in a small circle at a steady speed, keeping the camera parallel or at right angles to the horizon and being careful only to pan in the direction shown by the guides. Use a tripod for best results. If the desired results are not achieved, try panning at a different speed.

 Shooting ends if the shutter button is pressed all the way down during shooting. No panorama may be recorded if the shutter button is pressed before the panorama is complete.
Panoramas are created from multiple frames; exposure for the entire panorama is determined by the first frame. The camera may in some cases record an greater or lesser angle than selected or be unable to stitch the frames together perfectly. The last part of the panorama may not be recorded if shooting ends before the panorama is complete.

Shooting may be interrupted if the camera is panned too quickly or too slowly. Panning the camera in a direction other than that shown cancels shooting.

The desired results may not be achieved with moving subjects, subjects close to the camera, unvarying subjects such as the sky or a field of grass, subjects that are in constant motion, such as waves and waterfalls, or subjects that undergo marked changes in brightness. Panoramas may be blurred if the subject is poorly lit.

**Viewing Panoramas**

In full-frame playback, you can use the rear command dial to zoom panoramas in or out. Alternatively, you can play the panorama back using the selector.

Press the selector down to start playback and press again to pause. While playback is paused, you can scroll the panorama manually by pressing the selector left or right; vertical panoramas will scroll vertically, horizontal panoramas horizontally. To exit to full-frame playback, press the selector up.
Focus Mode

Use the focus mode selector to choose how the camera focuses (note that regardless of the option selected, manual focus will be used when the lens is in manual focus mode).

- **S** (single AF): Focus locks while the shutter button is pressed halfway. Choose for stationary subjects.
- **C** (continuous AF): Focus is continually adjusted to reflect changes in the distance to the subject while the shutter button is pressed halfway. Use for subjects that are in motion.
- **M** (manual): Focus manually using the lens focus ring. Rotate the ring left to reduce the focus distance, right to increase. The manual focus indicator indicates how closely the focus distance matches the distance to the subject in the focus brackets (the white line indicates the focus distance, the blue bar the depth of field, or in other words the distance in front of and behind the focus point that appears to be in focus); you can also check focus visually in the viewfinder or LCD monitor. Choose for manual control of focus or in situations in which the camera is unable to focus using autofocus (P 68).

- Use the **FOCUS RING** option in the setup menu (P 91) to reverse the direction of rotation of the focus ring.
- To use autofocus to focus on the subject in the selected focus area (P 45), press the **AF-L** button. Use this feature to quickly focus on a chosen subject in manual focus mode. Use **AUTOFOCUS SETTING > INSTANT AF SETTING** to choose whether the camera focuses using single or continuous AF (P 78).
- The camera can show focus distance in meters or feet. Use the **SCREEN SET-UP > FOCUS SCALE UNITS** option in the setup menu (P 91) to choose the units used.
- If **ON** is selected for **AUTOFOCUS SETTING > PRE-AF** in the shooting menu (P 78), focus will be adjusted continuously in modes **S** and **C** even when the shutter button is not pressed.
Focus Mode

■ The Focus Indicator

The focus indicator turns green when the subject is in focus and blinks white when the camera is unable to focus. Brackets (“( )”) indicate that the camera is focusing and are displayed continuously in mode C. MF is displayed in manual focus mode.

Checking Focus

To zoom in on the current focus area (45) for precise focus, press the FOCUS ASSIST button. Press the button again to cancel zoom. In manual focus mode, zoom can be adjusted by rotating the rear command dial when STANDARD or FOCUS PEAK HIGHLIGHT is selected for MF ASSIST, while if ON is selected for SCREEN SET-UP > FOCUS CHECK, the camera will automatically zoom in on the selected focus area when the focus ring is rotated. Focus zoom is not available in focus mode C or when AUTOFOCUS SETTING > PRE-AF is on.
Focus Mode

More on Photography and Playback

MF Assist

The **MF ASSIST** option in the setup menu can be used to check focus when pictures are framed in the LCD monitor or electronic viewfinder in manual focus mode.

- The **MF ASSIST** menu can be displayed by pressing and holding the **FOCUS ASSIST** button.

The following options are available:

- **FOCUS PEAK HIGHLIGHT**: Highlights high-contrast outlines. Rotate the focus ring until the subject is highlighted.

- **DIGITAL SPLIT IMAGE**: Displays a split, black-and-white image in the center of the frame. Frame the subject in the split-image area and rotate the focus ring until the three parts of the split image are correctly aligned.

The Dual Display

In manual focus mode, you can use the **DISP/BACK** button to select a dual display, with a main display area on the left that shows the entire frame and a smaller display area on the right that shows a magnified view of the current focus area.
Long Time-Exposures (T/B)

Select a shutter speed of T (time) or B (bulb) for long time-exposures.

⚠️ Use of a tripod is recommended to prevent the camera from moving during the exposure.
⚠️ To reduce “noise” (mottling) in long time-exposures, select ON for \textit{LONG EXPOSURE NR} in the shooting menu (P 80). Note that this may increase the time needed to record images after shooting.

**Time (T)**

1. Rotate the shutter speed dial to \textit{T}.

2. Rotate the front command dial to choose a shutter speed between 30 s and 2 s in steps of \( \frac{1}{3} \) EV.

3. Press the shutter button all the way down to take a picture at the selected shutter speed. A count-down timer will be displayed while the exposure is in progress.

**Bulb (B)**

1. Rotate the shutter speed dial to \textit{B}.

2. Press the shutter button all the way down. The shutter will remain open for up to 60 minutes while the shutter button is pressed; the display shows the time elapsed since the exposure started.

⚠️ Selecting an aperture of \textit{A} fixes shutter speed at 30 s.
**Interval Timer Photography**

Follow the steps below to configure the camera to take photos automatically at a preset interval.

1. Press **MENU/OK** in shooting mode to display the shooting menu. Press the selector up or down to highlight ** INTERVAL TIMER SHOOTING** and press **MENU/OK**.

2. Use the selector to choose the interval and number of shots. Press **MENU/OK** to proceed.

3. Use the selector to choose the starting time and then press **MENU/OK**. Shooting will start automatically.

Interval timer photography can not be used at a shutter speed of **B** (bulb) or during panorama or multiple exposure photography. In burst mode, only one picture will be taken each time the shutter is released.

- Use of a tripod is recommended.
- Check the battery level before starting. We recommend using an optional VG-XT1 vertical battery grip with an AC-9V AC power adapter and CP-W126 DC coupler.
- The display turns off between shots and lights a few seconds before the next shot is taken. The display can be activated at any time by pressing the shutter button all the way down.
Using a Remote Release
An optional RR-90 remote release can be used for long time-exposures. See the manual provided with the RR-90 for more information.

Third-Party Remote Releases
Electronic releases from third-party suppliers can be connected via the microphone/remote release connector. A confirmation dialog will be displayed when a third-party release is connected; press MENU/OK and select REMOTE for MIC/REMOTE RELEASE.
Focus/Exposure Lock

To compose photographs with off-center subjects:

1 **Focus**: Position the subject in the focus frame and press the shutter button halfway to lock focus and exposure. Focus and exposure will remain locked while the shutter button is pressed halfway (AF/AE lock).

- Focus and exposure can also be locked with the AF-L and AE-L buttons, respectively (if AE/AF LOCK is selected for AF LOCK MODE in the shooting menu, pressing the AF-L button will lock both focus and exposure; 76).

2 **Recompose**: Keep the shutter button pressed halfway or keep the AF-L or AE-L button pressed.

- Focus and/or exposure will remain locked while the AF-L or AE-L button is pressed, whether or not the shutter button is pressed halfway. If AE&AF ON/OFF SWITCH is selected for AE/AF-LOCK MODE (76), focus and/or exposure lock when the button is pressed and remain locked until the button is pressed again.

3 **Shoot**: Press the button all the way down.
Autofocus

Although the camera boasts a high-precision autofocus system, it may be unable to focus on the subjects listed below.

- Very shiny subjects such as mirrors or car bodies.

- Fast-moving subjects.

- Subjects photographed through a window or other reflective object.
- Dark subjects and subjects that absorb rather than reflect light, such as hair or fur.
- Insubstantial subjects, such as smoke or flame.
- Subjects that show little contrast with the background (for example, subjects in clothing that is the same color as the background).
- Subjects positioned in front of or behind a high-contrast object that is also in the focus frame (for example, a subject photographed against a backdrop of highly contrasting elements).
Recording Pictures in RAW Format

To record raw, unprocessed data from the camera image sensor, select a RAW option for image quality in the shooting menu as described below. JPEG copies of RAW images can be created using the RAW CONVERSION option in the playback menu, or RAW images can be viewed on a computer using the RAW FILE CONVERTER application that is installed with the software on the supplied CD (99, 100).

1 Press MENU/OK in shooting mode to display the shooting menu. Press the selector up or down to highlight IMAGE QUALITY and press MENU/OK.

2 Highlight an option and press MENU/OK. Select RAW to record only RAW images, or FINE+RAW or NORMAL+RAW to record both JPEG copy together with the RAW images. FINE+RAW uses lower JPEG compression ratios for higher-quality JPEG images, while NORMAL+RAW uses higher JPEG compression ratios to increase the number of images that can be stored.

The Function Buttons

To toggle RAW image quality on or off for a single shot, assign RAW to a function button (79). If a JPEG option is currently selected for image quality, pressing the button temporarily selects the equivalent JPEG+RAW option. If a JPEG+RAW option is currently selected, pressing the button temporarily selects the equivalent JPEG option, while if RAW is selected, pressing the button temporarily selects FINE. Taking a picture or pressing the button again restores the previous setting.

RAW image quality options are not available at sensitivities of L, H1, or H2 (50).
Recording Pictures in RAW Format

Creating JPEG Copies of RAW Pictures

RAW pictures store information on camera settings separately from the data captured by the camera image sensor. Using the **RAW CONVERSION** option in the playback menu, you can create JPEG copies of RAW pictures using different options for the settings listed below. The original image data are unaffected, allowing a single RAW image to be processed in a multitude of different ways.

1. Press **MENU/OK** during playback to display the playback menu, then press the selector up or down to highlight **RAW CONVERSION** and press **MENU/OK** to display the settings listed in the table at right.

   ◆ These options can also be displayed by pressing **Q** button during playback.

2. Press the selector up or down to highlight a setting and press the selector right to select. Press the selector up or down to highlight the desired option and press **MENU/OK** to select and return to the settings list. Repeat this step to adjust additional settings.

3. Press the **Q** button to preview the JPEG copy and press **MENU/OK** to save.

</tbody>
</table>
Saving Settings

Save up to 7 sets of custom camera settings for commonly-encountered situations. Saved settings can be recalled using the SELECT CUSTOM SETTING option in the shooting menu.

1. Press MENU/OK in shooting mode to display the shooting menu. Press the selector up or down to highlight EDIT/SAVE CUSTOM SETTING and press MENU/OK.

2. Highlight a custom settings bank and press MENU/OK to select. Adjust the following as desired and press DISP/BACK when adjustments are complete: DYNAMIC RANGE, FILM SIMULATION, WHITE BALANCE, COLOR, SHARPNESS, HIGHLIGHT TONE, SHADOW TONE, and NOISE REDUCTION.

To replace the settings in the selected bank with the settings currently selected with the camera, select SAVE CURRENT SETTINGS and press MENU/OK.

3. A confirmation dialog will be displayed; highlight OK and press MENU/OK.
Using a Mount Adapter

When M-mount lenses are attached using an optional FUJIFILM M MOUNT ADAPTER, the camera processes pictures as they are taken to maintain image quality and correct for a variety of effects.

- Attaching a mount adapter enables SHOOT WITHOUT LENS (81) and hides the distance indicator in the standard display.
- Before checking focus, set the focus mode selector to M (61).

Mount Adapter Settings

Pressing the function button on the mount adapter displays MOUNT ADAPTOR SETTING options.

Choosing a Focal Length

If the lens has a focal length of 21, 24, 28, or 35 mm, choose a matching option in the MOUNT ADAPTOR SETTING menu. For other lenses, select option 5 or 6 and use the selector to enter the focal length.

Distortion Correction

Choose from STRONG, MEDIUM, or WEAK options to correct BARREL or PINCUSHION distortion.

- To determine the amount required, adjust distortion correction while taking photos of graph paper or other objects featuring repeating vertical and horizontal lines, such as the windows in a high-rise.
**Color Shading Correction**

Color (shading) variations between the center and edges of the frame can be adjusted separately for each corner.

To use color shading correction, follow the steps below.

1. Rotate the rear command dial to choose a corner. The selected corner is indicated by a triangle.

2. Use the selector to adjust shading until there is no visible difference in color between the selected corner and the center of the image. Press the selector left or right to adjust colors on the cyan–red axis, up or down to adjust colors on the blue–yellow axis. There are a total of 19 positions available on each axis.

   To determine the amount required, adjust color shading correction while taking photos of blue sky or a sheet of gray paper.

**Peripheral Illumination Correction**

Choose from values between –5 and +5. Choosing positive values increases peripheral illumination, while choosing negative values reduces peripheral illumination. Positive values are recommended for vintage lenses, negative values to create the effect of images taken with an antique lens or a pinhole camera.

   To determine the amount required, adjust peripheral illumination correction while taking photos of blue sky or a sheet of gray paper.
Image Search

Follow the steps below to search for pictures.

1 Press **MENU/OK** during playback to display the playback menu. Press the selector up or down to highlight **IMAGE SEARCH** and press **MENU/OK**.

2 Highlight an option and press **MENU/OK**.

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>BY DATE</td>
<td>Search by date.</td>
</tr>
<tr>
<td>BY FACE</td>
<td>Search for pictures that include faces.</td>
</tr>
<tr>
<td>BY ★ FAVORITES</td>
<td>Search by rating (26).</td>
</tr>
<tr>
<td>BY TYPE OF DATA</td>
<td>Find all still pictures, all movies, or all RAW pictures.</td>
</tr>
<tr>
<td>BY UPLOAD MARK</td>
<td>Find all pictures selected for upload to a specified destination.</td>
</tr>
</tbody>
</table>

3 Select a search condition. Only pictures that match the search condition will be displayed. To delete or protect selected pictures or to view the selected pictures in a slide show, press **MENU/OK** and choose from the options at right.

4 To end the search, select **EXIT SEARCH**.
PhotoBook Assist

Create books from your favorite photos.

Creating a PhotoBook

1 Select NEW BOOK for PHOTOBOOK ASSIST in the playback menu (85) and choose from the following options:
   - SELECT FROM ALL: Choose from all available pictures.
   - SELECT BY IMAGE SEARCH: Choose from pictures matching selected search conditions (74).

Neither photographs 640 or smaller nor movies can be selected for photobooks.

2 Scroll through the images and press the selector up to select or deselect. To display the current image on the cover, press the selector down. Press MENU/OK to exit when the book is complete.

   The first picture selected becomes the cover image. Press the selector down to select a different image for the cover.

3 Highlight COMPLETE PHOTOBOOK and press MENU/OK (to select all photos or all photos matching the specified search conditions for the book, choose SELECT ALL). The new book will be added to the list in the photobook assist menu.

Books can contain up to 300 pictures.

Books that contain no photos are automatically deleted.
**Viewing Photobooks**
Highlight a book in the photobook assist menu and press **MENU/OK** to display the book, then press the selector left or right to scroll through the pictures.

**Editing and Deleting Photobooks**
Display the photobook and press **MENU/OK**. The following options will be displayed; select the desired option and follow the on-screen instructions.

- **EDIT**: Edit the book as described in “Creating a PhotoBook” (P. 75).
- **ERASE**: Delete the book.

---

**Photobooks**
Photobooks can be copied to a computer using the supplied MyFinePix Studio software (P. 98).
Menus

Using the Menus: Shooting Mode

The shooting menu is used to adjust settings for a wide range of shooting conditions. To display the shooting menu, press MENU/OK in shooting mode. Highlight items and press the selector right to view options, then highlight an option and press MENU/OK. Press DISP/BACK to exit when settings are complete.

Shooting Menu Options (Photographs)

DRIVE BKT/Adv. SETTING
Choose the bracketing option used when the DRIVE dial is rotated to BKT (40, 54) or the filter used when the dial is rotated to ADV. (40, 58).
### AUTOFOCUS SETTING

Adjust autofocus settings.

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>FOCUS AREA</td>
<td>Choose the focus area (P 45).</td>
</tr>
<tr>
<td>MACRO</td>
<td>Turn macro mode on or off (P 41).</td>
</tr>
</tbody>
</table>
| RELEASE/FOCUS PRIORITY | Choose how the camera focuses in focus mode **AF-S** or **AF-C**.  
• **RELEASE**: Shutter response is prioritized over focus. Pictures can be taken when the camera is not in focus.  
• **FOCUS**: Focus is prioritized over shutter response. Pictures can be only taken when the camera is in focus. |
| INSTANT AF SETTING | Choose how the camera focuses when the **AF-L** button is pressed in manual focus mode (P 61).                                                 |
| AF MODE           | Choose how the camera selects the focus area in focus modes **S** and **C**.  
• **MULTI**: When the shutter button is pressed halfway, the camera detects high-contrast subjects and selects the focus area automatically.  
• **AREA**: Choose the focus area manually (P 45).                                                                 |
| FACE DETECTION    | Turn Intelligent Face Detection on or off (P 38).                                                                                          |
| PRE-AF            | If **ON** is selected, the camera will continue to adjust focus even when the shutter-release button is not pressed halfway. Note that this increases the drain on the battery. |
| AF ILLUMINATOR    | If **ON** is selected, the AF-assist illuminator will light to assist autofocus.  
• The AF-assist illuminator turns off automatically in silent mode.  
• The camera may be unable to focus using the AF-assist illuminator in some cases. If the camera is unable to focus in macro mode, try increasing the distance to the subject.  
• Avoid shining the AF-assist illuminator directly into your subject’s eyes. |

### ISO AUTO SETTING

Adjust auto sensitivity settings (P 50).
Using the Menus: Shooting Mode

**IMAGE SIZE**

Choose the size and aspect ratio at which still pictures are recorded.

*Aspect Ratio*

Pictures with an aspect ratio of 3:2 have the same proportions as a frame of 35 mm film, while an aspect ratio of 16:9 is suited to display on High Definition (HD) devices. Pictures with an aspect ratio of 1:1 are square.

**IMAGE SIZE** is not reset when the camera is turned off or another shooting mode is selected.

**IMAGE QUALITY**

Choose a file format and compression ratio. Select **FINE** or **NORMAL** to record JPEG images, **RAW** to record RAW images, or **FINE+RAW** or **NORMAL+RAW** to record both JPEG and RAW images. **FINE** and **FINE+RAW** use lower JPEG compression ratios for higher-quality JPEG images, while **NORMAL** and **NORMAL+RAW** use higher JPEG compression ratios to increase the number of images that can be stored.

**DYNAMIC RANGE**

Control contrast. Choose lower values to increase contrast when shooting indoors or under overcast skies, higher values to reduce loss of detail in highlights and shadows when photographing high-contrast scenes. Higher values are recommended for scenes that include both sunlight and deep shade, for such high-contrast subjects as sunlight on water, brightly-lit autumn leaves, and portraits taken against a blue sky, and for white objects or people wearing white; note, however, that mottling may appear in pictures taken at higher values.

* If **AUTO** is selected, the camera will automatically choose either **100 100%** or **200 200%** according to the subject and shooting conditions. Shutter speed and aperture will be displayed when the shutter button is pressed halfway.

* **200 200%** is available at sensitivities of ISO 400 and above, **400 400%** at sensitivities of ISO 800 and above.

**FILM SIMULATION**

Simulate the effects of different types of film (42).

**SELF-TIMER**

Take pictures with the self-timer (35).
Using the Menus: Shooting Mode

[ INTERVAL TIMER SHOOTING ]
Adjust settings for interval timer photography (p. 65).

[ WHITE BALANCE ]
Adjust colors to match the light source (p. 43).

[ COLOR ]
Adjust color density.

[ SHARPNESS ]
Sharpen or soften outlines.

[ HIGHLIGHT TONE ]
Adjust the appearance of highlights.

[ SHADOW TONE ]
Adjust the appearance of shadows.

[ NOISE REDUCTION ]
Reduce noise in pictures taken at high sensitivities.

[ LONG EXPOSURE NR ]
Select ON to reduce mottling in long time-exposures (p. 64).

[ LENS MODULATION OPTIMIZER ]
Select ON to improve definition by adjusting for diffraction and the slight loss of focus at the periphery of the lens.

[ SELECT CUSTOM SETTING ]
Recall settings saved with EDIT/SAVE CUSTOM SETTING.

[ EDIT/SAVE CUSTOM SETTING ]
Save settings (p. 71).
Menus

Using the Menus: Shooting Mode

**MOUNT ADAPTOR SETTING**
Adjust settings for M-mount lenses connected using an optional FUJIFILM M MOUNT ADAPTER (page 72).

**SHOOT WITHOUT LENS**
Choose whether shutter release is enabled when no lens is attached.

**MF ASSIST**
Choose how focus is displayed in manual focus mode (page 63).
- **STANDARD**: Focus is displayed normally (focus peaking and digital split image are not available).
- **DIGITAL SPLIT IMAGE**: A black-and-white split-image display.
- **FOCUS PEAK HIGHLIGHT**: The camera heightens high-contrast outlines. Choose a color and peaking level.

**AE/AF-LOCK MODE**
If **AE & AF ON WHEN PRESSING** is selected, exposure and/or focus will lock while the **AE-L** or **AF-L** button is pressed. If **AE & AF ON/OFF SWITCH** is selected, exposure and/or focus will lock when the **AE-L** or **AF-L** button is pressed and remain locked until the button is pressed again.

**AF-LOCK MODE**
Choose the role played by the **AF-L** button (page 67).

**FLASH MODE**
Choose a flash mode (page 37).

**FLASH COMPENSATION**
Adjust flash brightness. Choose from values between +2 EV and –2 EV. Note that the desired results may not be achieved depending on shooting conditions and the distance to the subject.

**RED EYE REMOVAL**
Choose **ON** to remove red-eye effects caused by the flash.
- Red-eye reduction is performed only when a face is detected.
- Red-eye removal is not available with RAW images.
MOVIE SET-UP

Adjust movie settings (31).

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>MOVIE MODE</td>
<td>Select a frame size for movie recording.</td>
</tr>
<tr>

</tr>
<tr>
<td></td>
<td>• <strong>HD 1920×1080 30 fps</strong>: Full HD (30 fps)</td>
</tr>
<tr>
<td></td>
<td>• <strong>HD 1280×720 60 fps</strong>: HD (60 fps)</td>
</tr>
<tr>
<td></td>
<td>• <strong>HD 1280×720 30 fps</strong>: HD (30 fps)</td>
</tr>
<tr>
<td>MIC LEVEL ADJUSTMENT</td>
<td>Adjust the microphone recording level.</td>
</tr>
<tr>
<td>MIC/REMOTE RELEASE</td>
<td>Specify whether the device connected to the microphone/remote release connector is a microphone or a remote release (32, 66).</td>
</tr>
</tbody>
</table>

IS MODE

Reduce blur. This option is available only with lenses that support image stabilization.

- **CONTINUOUS**: Image stabilization on.
- **SHOOTING ONLY**: Image stabilization enabled only when the shutter button is pressed halfway or the shutter is released.
- **OFF**: Image stabilization off; ⌘ appears in the display (5). Recommended when using a tripod.

WIRELESS COMMUNICATION

Connect to a smartphone or tablet over a wireless network (97).

- For more information, visit http://fujifilm-dsc.com/wifi/.

APERTURE SETTING

Choose the method used to adjust aperture when using lenses with no aperture rings.

- **AUTO + MANUAL**: Rotate the rear command dial to choose the aperture. Rotate past minimum aperture to choose A (auto).
- **AUTO**: Aperture is selected automatically; camera functions in exposure mode P (program AE) or S (shutter-priority AE).
- **MANUAL**: Rotate the rear command dial to choose the aperture; camera functions in exposure mode A (aperture-priority AE) or M (manual).

- Aperture can not be adjusted while the view through the camera lens is zoomed in.
Using the Menus: Playback Mode

To display the playback menu, press **MENU/OK** in playback mode. Highlight items and press the selector right to view options, then highlight an option and press **MENU/OK**. Press **DISP/BACK** to exit when settings are complete.

**Playback Menu Options**

- **WIRELESS COMMUNICATION**
  Connect to a smartphone or tablet over a wireless network (97).
  
  For more information, visit [http://fujifilm-dsc.com/wifi/](http://fujifilm-dsc.com/wifi/).

- **RAW CONVERSION**
  Create JPEG copies of RAW pictures (70).

- **ERASE**
  Delete pictures (30).

- **CROP**
  Create a cropped copy of the current picture.

  1. Display the desired picture.
  2. Select **CROP** in the playback menu.
  3. Use the rear command dial to zoom in and out and press the selector up, down, left, or right to scroll the picture until the desired portion is displayed.
  4. Press **MENU/OK** to display a confirmation dialog.
  5. Press **MENU/OK** again to save the cropped copy to a separate file.

  Larger crops produce larger copies; all copies have an aspect ratio of 3:2. If the size of the final copy will be 640, **OK** will be displayed in yellow.
Using the Menus: Playback Mode

**RESIZE**
Create a cropped copy of the current picture.

1. Display the desired picture.
2. Select **RESIZE** in the playback menu.
3. Highlight a size and press **MENU/OK** to display a confirmation dialog.
4. Press **MENU/OK** again to save the resized copy to a separate file.

⚠️ The sizes available vary with the size of the original image.

**PROTECT**
Protect pictures from accidental deletion. Highlight one of the following options and press **MENU/OK**.
- **FRAME**: Protect selected pictures. Press the selector left or right to view pictures and press **MENU/OK** to select or deselect. Press **DISP/BACK** when the operation is complete.
- **SET ALL**: Protect all pictures.
- **RESET ALL**: Remove protection from all pictures.

⚠️ Protected pictures will be deleted when the memory card is formatted (_page 94).

**IMAGE ROTATE**
Rotate pictures.

1. Display the desired picture.
2. Select **IMAGE ROTATE** in the playback menu.
3. Press the selector down to rotate the picture 90° clockwise, up to rotate it 90° counterclockwise.
4. Press **MENU/OK**. The picture automatically be displayed in the selected orientation whenever it is played back on the camera.

⚠️ Protected pictures can not be rotated. Remove protection before rotating pictures.
⚠️ The camera may not be able to rotate pictures created with other devices. Pictures rotated on the camera will not be rotated when viewed on a computer or on other cameras.
⚠️ Pictures taken with **SCREEN SET-UP > AUTORotate PB** are automatically displayed in the correct orientation during playback (page 91).
### RED EYE REMOVAL
Remove red-eye from portraits. The camera will analyze the image; if red-eye is detected, the image will be processed to create a copy with reduced red-eye.

1. Display the desired picture.
2. Select **RED EYE REMOVAL** in the playback menu.
3. Press **MENU/OK**.

- Red eye may not be removed if the camera is unable to detect a face or the face is in profile. Results may differ depending on the scene. Red eye can not be removed from pictures that have already been processed using red-eye removal or pictures created with other devices.
- The amount of time needed to process the image varies with the number of faces detected.
- Copies created with **RED EYE REMOVAL** are indicated by a **icon during playback.
- Red eye removal can not be performed on RAW images.

### SLIDE SHOW
View pictures in an automated slide show. Choose the type of show and press **MENU/OK** to start. Press **DISP/BACK** at any time during the show to view on-screen help. The show can be ended at any time by pressing **MENU/OK**.

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>

</thead>
<tbody>
<tr>
<td>NORMAL</td>
<td>Press the selector left or right to go back or skip ahead one frame. Select <strong>FADE-IN</strong> for fade transitions between frames.</td>
</tr>
<tr>
<td>FADE-IN</td>
<td>As above, except that camera automatically zooms in on faces.</td>
</tr>
<tr>
<td>MULTIPLE</td>
<td>Display several pictures at once.</td>
</tr>
</tbody>
</table>

- The camera will not turn off automatically while a slide show is in progress.

### PHOTOBK ASSIST
Create books from your favorite photos (75).
Using the Menus: Playback Mode

**MARK FOR UPLOAD TO**
Select pictures for upload to YouTube, Facebook or MyFinePix.com using MyFinePix Studio (Windows only).

1. Select **YouTube** to choose movies for upload to YouTube, **Facebook** to choose photos and movies for upload to Facebook, or **MyFinePix.com** to choose photos for upload to MyFinePix.com.

2. Press the selector left or right to display pictures and press **MENU/OK** to select or deselect. Press **DISP/BACK** to exit when all the desired pictures are selected.

- Only movies can be selected for upload to YouTube.
- Only photos can be selected for upload to MyFinePix.com.
- During playback, selected pictures are indicated by **YouTube**, **Facebook** or **MyFinePix.com** icons.
- Choose **RESET ALL** to deselect all pictures. If the number of pictures affected is very large, some time may be required to complete the operation. Press **DISP/BACK** to exit before the operation is complete.

**Uploading Pictures (Windows Only)**
Selected pictures can be uploaded using the **YouTube/Facebook/MyFinePix.com Upload** option in MyFinePix Studio. For information on installing MyFinePix Studio and connecting the camera to a computer, see “Viewing Pictures on a Computer” (page 98).

**IMAGE SEARCH**
Search for pictures (page 74).

**PC AUTO SAVE**
Upload pictures to a computer over a wireless network (page 97).

- For more information, visit [http://fujifilm-dsc.com/wifi/](http://fujifilm-dsc.com/wifi/).

**PRINT ORDER (DPOF)**
Select pictures for printing on DPOF- and PictBridge-compatible devices (page 105).
**DISP ASPECT**

Choose how High Definition (HD) devices display pictures with an aspect ratio of 3:2 (this option is available only when an HDMI cable is connected). Select 16:9 to display the image so that it fills the screen with its top and bottom cropped out, 3:2 to display the entire image with black bands at either side.
The Setup Menu

Using the Setup Menu

1 Display the setup menu.
   1.1 Press **MENU/OK** to display the menu for the current mode.

   1.2 Press the selector left to highlight the tab for the current menu.

   1.3 Press the selector down to highlight the setup menu tab containing the desired option.

   1.4 Press the selector right to place the cursor in the setup menu.

2 Adjust settings.
   Highlight items and press the selector right to view options, then highlight an option and press **MENU/OK**. Press **DISP/BACK** to exit when settings are complete.
**Setup Menu Options**

**DATE/TIME**
Set the camera clock (page 18).

**TIME DIFFERENCE**
Switch the camera clock instantly from your home time zone to the local time at your destination when traveling. To specify the difference between local time and your home time zone:

1. Highlight ⬅ LOCAL and press MENU/OK.
2. Use the selector to choose the time difference between local time and your home time zone. Press MENU/OK when settings are complete.

To set the camera clock to local time, highlight ⬅ LOCAL and press MENU/OK. To set the clock to the time in your home time zone, select ⎧ HOME. If ⬅ LOCAL is selected, ⬅ will be displayed for three seconds when the camera is turned on.

**言語/LANG:**
Choose a language (page 18).

**RESET**
Reset shooting or setup menu options to default values. Custom white balance, custom settings banks created using EDIT/SAVE CUSTOM SETTING, and DATE/TIME, TIME DIFFERENCE, SCREEN SET-UP > BACKGROUND COLOR, the wireless options in the shooting menu, and the setup menu WIRELESS SETTINGS > GENERAL SETTINGS and PC AUTO SAVE SETTINGS options are not affected.

1. Highlight the desired option and press the selector right.
2. A confirmation dialog will be displayed; highlight OK and press MENU/OK.

**SILENT MODE**
Select ON to disable the speaker, flash, and illuminator in situations in which camera sounds or lights may be unwelcome (note that silent mode can not be enabled or disabled during movie playback). ✂️ appears in the display when silent mode is on.
## SOUND SET-UP

Adjust sound settings.

<td>GEOTAGGING</td>
<td>Choose whether location data downloaded from a smartphone are embedded in pictures as they are taken.</td>
</tr>
<tr>
<td>LOCATION INFO</td>
<td>Display the location data last downloaded from a smartphone.</td>
</tr>
</tbody>
</table>

For more information, visit \url{http://fujifilm-dsc.com/wifi/}.

\textbf{FORMAT}

Select \textbf{OK} to format the memory card.

1. All data—including protected pictures—will be deleted from the memory card. Be sure important files have been copied to a computer or other storage device.
1. Do not open the battery-chamber cover during formatting.
**Factory Defaults**

The factory default settings for the options in the shooting and setup menus are listed below. These settings can be restored using the **RESET** option in the setup menu (page 89).

Connections

Wireless Transfer

Access wireless networks and connect to computers, smartphones, or tablets. For downloads and other information, visit http://fujifilm-dsc.com/wifi/.

Wireless Connections: Smartphones
Install the “FUJIFILM Camera Remote” app on your smartphone to browse the images on the camera, download selected images, control the camera remotely, or copy location data to the camera. To connect to the smartphone, press the camera Wi-Fi button in playback mode.

Wireless Connections: Computers
Once you have installed the “FUJIFILM PC AutoSave” application and configured your computer as a destination for the images copied from the camera, you can upload pictures from the camera using the PC AUTO SAVE option in the camera playback menu or by pressing and holding the Wi-Fi button in playback mode.

You can also connect using the WIRELESS COMMUNICATION options in the camera shooting and playback menu. To connect in shooting mode, assign WIRELESS COMMUNICATION to a function button ( 39).
Viewing Pictures on a Computer

The supplied software can be used to copy pictures to a computer, where they can be stored, viewed, organized, and printed. Before proceeding, install the software as described below. Do not connect the camera to the computer until installation is complete.

Windows: Installing MyFinePix Studio

1. Confirm that the computer meets the following system requirements:

<table>
<thead>
<tr>
<th></th>
<th>Windows 8/Windows 7 (Service Pack 1)/Windows Vista (Service Pack 2)</th>
<th>Windows XP (Service Pack 3)</th>
</tr>
</thead>
<tbody>
<tr>
<td>CPU</td>
<td>3 GHz Pentium 4 or better (2.4 GHz Core 2 Duo or better)</td>
<td>2 GHz Pentium 4 or better (2.4 GHz Core 2 Duo or better)</td>
</tr>
<tr>
<td>RAM</td>
<td>1 GB or more</td>
<td>512 MB or more (1 GB or more)</td>
</tr>
<tr>
<td>Free disk space</td>
<td></td>
<td>2 GB or more</td>
</tr>
<tr>
<td>GPU</td>
<td>Supports DirectX 9 or later (recommended)</td>
<td>Supports DirectX 7 or later (required; performance not guaranteed with other GPUs)</td>
</tr>
<tr>
<td>Video</td>
<td>1024 × 768 pixels or more with 24-bit color or better</td>
<td></td>
</tr>
</tbody>
</table>
| Other                | • Built-in USB port recommended. Operation is not guaranteed with other USB ports.  
|                      | • .NET Framework 3.5 Service Pack 1 required when uploading images or using Map Viewer.  
|                      | • Internet connection (broadband recommended) required to install .NET Framework (if necessary), to use auto update feature, and when performing such tasks as sharing pictures on-line or via e-mail. |

1 Other versions of Windows are not supported. Only pre-installed operating systems are supported; operation is not guaranteed on home-built computers or computers that have been upgraded from earlier versions of Windows.
2 Recommended when displaying HD movies.

2. Start the computer. Log in to an account with administrator privileges before proceeding.
3 Exit any applications that may be running and insert the installer CD in a CD-ROM drive.

**Windows 8/Windows 7/Windows Vista**
If an AutoPlay dialog is displayed, click SETUP.EXE. A “User Account Control” dialog will then be displayed; click Yes (Windows 8/Windows 7) or Allow (Windows Vista).

The installer will start automatically; click Install MyFinePix Studio and follow the on-screen instructions to install MyFinePix Studio and RAW FILE CONVERTER.

**If the Installer Does Not Start Automatically**
If the installer does not start automatically, follow the steps below.

- **Windows 8**: Select Desktop from the Start screen, then select File Explorer on the desktop taskbar and choose Computer in the navigation panel. Double-click the drive containing the installer CD and follow the on-screen instructions.
- **Other versions of Windows**: Select Computer or My Computer from the Start menu, then double-click the FINEPIX CD icon to open the FINEPIX CD window and double-click setup or SETUP.EXE.

4 If prompted to install Windows Media Player or DirectX, follow the on-screen instructions to complete installation.

5 Remove the installer CD from the CD-ROM drive when installation is complete. Store the installer CD in a dry location out of direct sunlight in case you need to re-install the software.

Installation is now complete. Proceed to “Connecting the Camera” (101).
**Macintosh: Installing RAW FILE CONVERTER**

RAW FILE CONVERTER is used to view RAW images on your computer.

1. Confirm that the computer meets the following system requirements:

<table>
<thead>
<tr>
<th>Requirement</th>
<th>Specification</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>CPU</strong></td>
<td>Intel (Core 2 Duo or better)</td>
</tr>
<tr>
<td><strong>RAM</strong></td>
<td>1 GB or more</td>
</tr>
<tr>
<td><strong>Free disk space</strong></td>
<td>A minimum of 200 MB required for installation with 400 MB available when RAW FILE CONVERTER is running</td>
</tr>
<tr>
<td><strong>Video</strong></td>
<td>1,024 × 768 pixels or more with 24-bit color or better</td>
</tr>
</tbody>
</table>

2. After starting the computer and quitting any applications that may be running, insert the installer CD in a CD-ROM drive and double-click **SILKYRFCEXInstaller**.

3. Enter an administrator name and password when prompted and click **OK**, then follow the on-screen instructions to install. Click **Exit** to quit the installer when installation is complete.

4. Remove the installer CD from the CD-ROM drive. Note that you may be unable to remove the CD if Safari is running; if necessary, quit Safari before removing the CD. Store the installer CD in a dry location out of direct sunlight in case you need to re-install the software.

Installation is now complete. Proceed to “Connecting the Camera” (101).
**Connecting the Camera**

1. Find a memory card containing pictures you want to copy to the computer and insert the card into the camera (14).

   - Windows users may require the Windows CD when starting the software for the first time.
   - Loss of power during transfer could result in loss of data or damage to the memory card. Insert a fresh or fully-charged battery before connecting the camera.

2. Turn the camera off and connect a USB cable (available separately from third-party suppliers) as shown, making sure the connectors are fully inserted. Connect the camera directly to the computer; do not use a USB hub or keyboard.

   - The USB cable must be no more than 1.5 m (4.9 ft.) long and be suitable for data transfer.

3. Turn the camera on.

4. Upload pictures in MyFinePix Studio and follow the on-screen instructions to copy pictures to the computer. To exit without copying pictures, click **Cancel**.

**Copying Pictures to Macintosh Computers (Mac OS)**

Use a standard Mac OS application such as Image Capture to copy pictures or movies to a Mac.

For more information on using the supplied software, start the application and select the appropriate option from the **Help** menu.
Viewing Pictures on a Computer

1. If a memory card containing a large number of images is inserted, there may be a delay before the software starts and you may be unable to import or save images. Use a memory card reader to transfer pictures.

2. Make sure that the computer does not display a message stating that copying is in progress and that the indicator lamp is out before turning the camera off or disconnecting the USB cable (if the number of images copied is very large, the indicator lamp may remain lit after the message has cleared from the computer display). Failure to observe this precaution could result in loss of data or damage to the memory card.

3. Disconnect the camera before inserting or removing memory cards.

4. In some cases, it may not be possible to access pictures saved to a network server using the supplied software in the same way as on a standalone computer.

5. The user bears all applicable fees charged by the phone company or Internet service provider when using services that require an Internet connection.

---

**Disconnecting the Camera**

After confirming that the indicator lamp is out, turn the camera off and disconnect the USB cable.

**Uninstalling the Supplied Software**

Only uninstall the supplied software when it is no longer required or before beginning reinstallation. After quitting the software and disconnecting the camera, drag “RAW FILE CONVERTER EX powered by SILKYPIX” from “Applications” into the Trash and select **Empty Trash** in the **Finder** menu (Macintosh), or open the control panel and use “Programs and Features” (Windows 8/Windows 7/Windows Vista) or “Add or Remove Programs” (Windows XP) to uninstall MyFinePix Studio. Under Windows, one or more confirmation dialogs may be displayed; read the contents carefully before clicking **OK**.
Printing Pictures via USB

If the printer supports PictBridge, the camera can be connected directly to the printer and pictures can be printed without first being copied to a computer. Note that depending on the printer, not all the functions described below may be supported.

Connecting the Camera

1. Connect a USB cable (available separately from third-party suppliers) as shown and turn the printer on.

2. The USB cable must be no more than 1.5 m (4.9 ft.) long and be suitable for data transfer.

3. Turn the camera on. USB will be displayed in the monitor, followed by the PictBridge display shown below at right.

   - Pictures can be printed from memory cards that has been formatted in the camera.
   - Page size, print quality, and border selections are made using the printer.

Printing Selected Pictures

1. Press the selector left or right to display a picture you wish to print.

   - To print one copy of the current picture, proceed directly to Step 3.

2. Press the selector up or down to choose the number of copies (up to 99). Repeat steps 1–2 to select additional pictures.

3. Press MENU/OK to display a confirmation dialog.

4. Press MENU/OK to start printing.
Printing the Date of Recording

To print the date of recording on pictures, press DISP/BACK in the PictBridge display and select PRINT WITH DATE (to print pictures without the date of recording, select PRINT WITHOUT DATE). To ensure that the date is correct, set the camera clock before taking pictures. Some printers do not support date printing. See the printer manual for details.

Printing the DPOF Print Order

To print the print order created with PRINT ORDER (DPOF) in the playback menu (page 86):

1. In the PictBridge display, press DISP/BACK to open the PictBridge menu.
2. Press the selector up or down to highlight PRINT DPOF.
3. Press MENU/OK to display a confirmation dialog.
4. Press MENU/OK to start printing.
**During Printing**
The message shown at right is displayed during printing. Press DISP/BACK to cancel before all pictures are printed (depending on the printer, printing may end before the current picture has printed).

If printing is interrupted, turn the camera off and then on again.

**Disconnecting the Camera**
Confirm that the above message is not displayed and turn the camera off. Disconnect the USB cable.

---

**Creating a DPOF Print Order**
The PRINT ORDER (DPOF) option in the playback menu can be used to create a digital “print order” for PictBridge-compatible printers or devices that support DPOF.

**DPOF**
DPOF (Digital Print Order Format) is standard that allows pictures to be printed from “print orders” stored on the memory card. The information in the order includes the pictures to be printed and the number of copies of each picture.
Printing Pictures via USB

106

■ WITH DATE /
■ WITHOUT DATE
To modify the DPOF print order, select PRINT ORDER (DPOF) in the playback menu and press the selector up or down to highlight WITH DATE or WITHOUT DATE.

Press MENU/OK and follow the steps below.

1 Press the selector left or right to display a picture you wish to include in or remove from the print order.

2 Press the selector up or down to choose the number of copies (up to 99). To remove a picture from the order, press the selector down until the number of copies is 0.

3 Repeat steps 1–2 to complete the print order. Press MENU/OK to save the print order when settings are complete, or DISP/BACK to exit without changing the print order.

4 The total number of prints is displayed in the monitor. Press MENU/OK to exit.

The pictures in the current print order are indicated by a icon during playback.

WITH DATE: Print date of recording on pictures.

WITHOUT DATE: Print pictures without date.
■ RESET ALL
To cancel the current print order, select **RESET ALL** for **PRINT ORDER (DPOF)**. The confirmation shown at right will be displayed; press **MENU/OK** to remove all pictures from the order.

- Print orders can contain a maximum of 999 pictures.
- If a memory card is inserted containing a print order created by another camera, the message shown at right will be displayed. Pressing **MENU/OK** cancels the print order; a new print order must be created as described above.
Viewing Pictures on TV

To show pictures to a group, connect the camera to a TV using an HDMI cable (available separately from third-party suppliers; note that the TV can only be used for playback, not shooting).

1 Turn the camera off.

2 Connect the cable as shown below.

3 Tune the television to the HDMI input channel. See the documentation supplied with the television for details.

4 Turn the camera on and press [ ] button. The camera monitor turns off and pictures and movies are played back on the TV. Note that the camera volume controls have no effect on sounds played on the TV; use the television volume controls to adjust the volume.

- Use an HDMI cable no more than 1.5 m (4.9 ft.) long.
- Be sure the connectors are fully inserted.
- The USB cable can not be used while an HDMI cable is connected.
- Some televisions may briefly display a black screen when movie playback begins.
Technical Notes

Optional Accessories

The camera supports a wide range of accessories from FUJIFILM and other manufacturers.

**Accessories from FUJIFILM**

The following optional accessories are available from FUJIFILM. For the latest information on the accessories available in your region, check with your local FUJIFILM representative or visit [http://www.fujifilm.com/products/digital_cameras/index.html](http://www.fujifilm.com/products/digital_cameras/index.html).

## Optional Accessories

### FUJINON lenses

**XF-series lenses**: Interchangeable lenses for use exclusively with the FUJIFILM X-mount.

** XC-series lenses**: Interchangeable lenses for use exclusively with the FUJIFILM X-mount.

### Shoe-mounted flash units

**EF-20**: This clip-on flash unit (powered by two AA batteries) has a Guide Number of 20/65 (ISO 100, m/ft.) and supports TTL flash control. The flash head can be rotated upwards 90° for bounce lighting.

**EF-42**: This clip-on flash unit (powered by four AA batteries) has a Guide Number of 42/137 (ISO 100, m/ft.) and supports TTL flash control and auto power zoom in the range 24–105 mm (35 mm format equivalent). The flash head can be rotated 90° up, 180° left, or 120° right for bounce lighting.

**EF-X20**: This clip-on flash unit has a Guide Number of 20/65 (ISO 100, m/ft.).

### Mount adapters

**FUJIFILM M MOUNT ADAPTER**: Allows the camera to be used with a wide selection of M-mount lenses.

### Protector filters

### Grips

**MHG-XT**: Features an improved grip. Batteries and memory cards can be removed with the grip in place, and the grip is equipped with a rail for quick-shoe camera mounts. The tripod mount can be aligned with the lens optical axis.

### Leather cases

**BLC-XT1**: This case combines practicality with the luxury of leather and comes with a shoulder strap made of the same material, as well as a cloth that can be used to wrap the camera before putting it in the case and on other occasions. Pictures can be taken and batteries inserted or removed with the camera still in its case.

The Vertical Battery Grip

The optional VG-XT1 vertical battery grip accommodates an extra battery for improved endurance and makes it easier to hold the camera rotated 90° to frame pictures in “tall” (portrait) orientation.

Parts of the VG-XT1

The shooting controls on the VG-XT1 perform the same functions as the controls on the camera.

1. Shutter button
2. Control lock
3. Front command dial
4. Lock screw knob
5. Eyelet for camera strap
6. Tripod socket
7. Connector
8. Lock screw
9. Compartment for connector cover supplied with camera
10. FOCUS ASSIST button
11. Rear command dial
12. AE-L button
13. AF-L button
14. DC coupler connector cover
15. Battery-chamber cover latch
16. Battery-chamber cover
**Attaching the VG-XT1**
The VG-XT1 attaches as shown below.

1. Remove the vertical battery grip connector cover from the camera and place it in the grip connector cover compartment.

2. Align the connectors on the grip with the matching connectors on the camera.

3. Rotate the lock screw knob to tighten the lock screw.

---

**Inserting a Battery**
Insert a battery as shown below.

1. Unlatch and open the battery-chamber cover.

2. Insert the battery.

3. Close and latch the battery-chamber cover.

- The battery in the grip is used before the battery in the camera. The camera automatically switches to the camera battery when the battery in the grip is exhausted. Movie recording and bulb photography will end when the camera switches batteries. When the battery in the grip is exhausted, remove and charge the battery or replace it with a fully-charged spare battery.

- The camera shows the levels of both batteries, with the camera battery level listed first.

---

**AC Power Adapters**
The grip can be used with an optional AC-9V AC power adapter and CP-W126 DC coupler.
Caring for the Camera

To ensure continued enjoyment of the product, observe the following precautions.

Storage and Use

If the camera will not be used for an extended period, remove the battery and memory card. Do not store or use the camera in locations that are:
- exposed to rain, steam, or smoke
- very humid or extremely dusty
- exposed to direct sunlight or very high temperatures, such as in a closed vehicle on a sunny day
- extremely cold
- subject to strong vibration
- exposed to strong magnetic fields, such as near a broadcasting antenna, power line, radar emitter, motor, transformer, or magnet
- in contact with volatile chemicals such as pesticides
- next to rubber or vinyl products

■ Water and Sand

This camera cannot be used under water. Keep the camera against penetration of garbage, mud, sand, dust, water, harmful gas, salt, and so on. Do not place the camera on a wet surface. Make sure the covers (caps) for the battery, card slot and ports are securely closed before use. If the camera is exposed to rain, droplets of water, and so on, dry it thoroughly.

■ Condensation

Sudden increases in temperature, such as occur when entering a heated building on a cold day, can cause condensation inside the camera. If this occurs, turn the camera off and wait an hour before turning it on again. If condensation forms on the memory card, remove the card and wait for the condensation to dissipate.

Traveling

Keep the camera in your carry-on baggage. Checked baggage may suffer violent shocks that could damage the camera.
Cleaning the Image Sensor

Multiple photographs marred by spots or blotches in identical locations may indicate the presence of dust on the camera image sensor. Clean the sensor using the `SENSOR CLEANING` option in the setup menu (P 92); if the problem persists, you can clean the sensor manually as described below. Note that there will be a charge to repair or replace the image sensor if it is damaged during cleaning.

1. Use a blower (not a brush) to remove dust from the sensor.

   🔄 Do not use a brush or blower brush. Failure to observe this precaution could damage the sensor.

2. Check whether the dust has been successfully removed.
   - Repeat Steps 1 and 2 as necessary.

3. Replace the body cap or lens.
## Troubleshooting

### Problems and Solutions

#### Power and Battery

<table>
<thead>
<tr>

</thead>
</table>
| The camera does not turn on. | - **The battery is exhausted**: Charge the battery (13) or insert a fully-charged spare battery (14).  
- **The battery is inserted incorrectly**: Reinsert in the correct orientation (14).  
- **The battery-chamber cover is not latched**: Latch the battery-chamber cover (14). |

| The monitor does not turn on. | The monitor may not turn on if the camera is turned off and then on again very quickly. Press the shutter button halfway to activate the monitor. |

| The battery runs down quickly. | - **The battery is cold**: Warm the battery by placing it in a pocket or other warm place and reinsert it in the camera immediately before taking a picture.  
- **There is dirt on the battery terminals**: Clean the terminals with a soft, dry cloth.  
- **ON is selected for AUTOFOCUS SETTING > PRE-AF**: Turn PRE-AF off (78).  
- **The battery has been charged many times**: The battery has reached the end of its charging life. Purchase a new battery. |

| The camera turns off suddenly. | **The battery is exhausted**: Charge the battery (13) or insert a fully-charged spare battery (14).  
Charging does not start. | Reinsert the battery in the correct orientation and make sure that the charger is plugged in (13). |

| Charging is slow. | Charge the battery at room temperature (iv). |

| The charging lamp blinks, but the battery does not charge. | - **There is dirt on the battery terminals**: Clean the terminals with a soft, dry cloth.  
- **The battery has been charged many times**: The battery has reached the end of its charging life. Purchase a new battery. If the battery still fails to charge, contact your FUJIFILM dealer. |

| The flash does not fire. | - **The flash can not be used at current settings**: See the list of the settings that can be used with the flash.  
- **The flash is lowered**: Raise the flash (P 36).  
- **The DRIVE dial is rotated to BKT, CH, or CL**: Rotate the dial to **S** (P 54, 56).  
- **The battery is exhausted**: Charge the battery (P 13) or insert a fully-charged spare battery (P 14).  
- **The camera is in bracketing or continuous mode**: Select single frame mode.  
- **The camera is in silent mode**: Turn silent mode off (P 89). |
| Some flash modes are not available. | The camera is in silent mode. Turn silent mode off (P 89). |
| The flash does not fully light the subject. | - **The subject is not in range of the flash**: Position the subject in range of the flash (P 127).  
- **The flash window is obstructed**: Hold the camera correctly (P 25).  
- **Shutter speed is faster than \( \frac{1}{180} \) s**: Choose a slower shutter speed (P 37, 47, 49). |
| Pictures are blurred. | - **The lens is dirty**: Clean the lens (P xi).  
- **The lens is blocked**: Keep objects away from the lens.  
- **\(^{1}\)AF is displayed during shooting and the focus frame is displayed in red**: Check focus before shooting (P 25).  
- **\(^{1}\)O is displayed during shooting**: Use the flash or mount the camera on a tripod (P 36). |
| Pictures are mottled. | - **Shutter speed is slow and the ambient temperature is high**: This is normal and does not indicate a malfunction.  
- **The camera has been used continuously at high temperatures or a temperature warning is displayed**: Turn the camera off and wait for it to cool down. |
## Problems and Solutions

### Playback

<table>
<thead>
<tr>
<th>Problem</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pictures are grainy.</td>
<td>The pictures were taken with a different make or model of camera.</td>
</tr>
<tr>
<td>Playback zoom is unavailable.</td>
<td>The pictures were created using RESIZE or with a different make or model of camera.</td>
</tr>
<tr>
<td>No sound in movie playback.</td>
<td>• Playback volume is too low: Adjust playback volume (90).</td>
</tr>
<tr>
<td></td>
<td>• The microphone was obstructed: Hold the camera correctly during recording (2, 31).</td>
</tr>
<tr>
<td></td>
<td>• The speaker is obstructed: Hold the camera correctly during playback (2, 33).</td>
</tr>
<tr>
<td></td>
<td>• The camera is in silent mode: Turn silent mode off (89).</td>
</tr>
<tr>
<td>Selected pictures are not deleted.</td>
<td>Some of the pictures selected for deletion are protected. Remove protection using the device with which it was originally applied (84).</td>
</tr>
<tr>
<td>File numbering is unexpectedly reset.</td>
<td>The battery-chamber cover was opened while the camera was on. Turn the camera off before opening the battery-chamber cover (14, 17).</td>
</tr>
</tbody>
</table>

### Connections/Miscellaneous

For additional information on troubleshooting wireless connections, visit:

http://faq.fujifilm.com/digitalcamera/faq_product.html?pid=F

<table>
<thead>
<tr>
<th>Problem connecting or uploading pictures to smartphone.</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• The smartphone is too far away: Move the devices closer.</td>
</tr>
<tr>
<td></td>
<td>• Nearby devices are causing radio interference: Move the camera and smartphone away from microwave ovens or cordless phones.</td>
</tr>
<tr>
<td>Can not upload images.</td>
<td>• The smartphone is connected to another device: The smartphone and camera can connect to only one device at a time. End the connection and try again.</td>
</tr>
<tr>
<td></td>
<td>• There are several smartphones in the vicinity: Try connecting again. The presence of multiple smartphones can make connection difficult.</td>
</tr>
<tr>
<td></td>
<td>• The current image is a movie or was created on another device and can not be uploaded to a smartphone.</td>
</tr>
</tbody>
</table>

Smartphone will not display pictures. Select **ON** for WIRELESS SETTING > RESIZE IMAGE FOR SMARTPHONE **ON**. Selecting **OFF** increases upload times for larger images; in addition, some phones may not display images over a certain size.
<table>
<thead>
<tr>
<th>Problem</th>
<th>Solution</th>
</tr>
</thead>
</table>
| **No picture or sound on TV.** | - **The camera is not properly connected**: Connect the camera properly (108). Note that once the camera is connected, pictures will be displayed on the TV instead of in the camera monitor.  
- **Input on the television is set to “TV”**: Set input to “HDMI”.  
- **The volume on the TV is too low**: Use the controls on the television to adjust the volume. |
| **The computer does not recognize the camera.** | Be sure the camera and computer are correctly connected (101). |
| **Can not transfer RAW or JPEG files to computer.** | Use the bundled software to transfer pictures (98). |
| **Pictures can not be printed.** | - **The camera is not properly connected**: Connect the camera correctly (103).  
- **The printer is off**: Turn the printer on. |
| **Only one copy is printed/ the date is not printed.** | The printer is not PictBridge compatible. |
| **The camera is unresponsive.** | - **Temporary camera malfunction**: Remove and reinsert the battery (14).  
- **The battery is exhausted**: Charge the battery (13) or insert a fully-charged spare battery (14). |
| **The camera does not function as expected.** | Remove and reinsert the battery (14). If the problem persists, contact your FUJIFILM dealer. |
| **No sound.** | Turn silent mode off (89). |
### Warning Messages and Displays

The following warnings appear in the display.

<table>
<thead>
<tr>
<th>Warning</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>

## Specifications

### System

<table>
<thead>
<tr>
<th>Mode</th>
<th>Frame rate (fps)</th>
<th>Frames per burst</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>8.0</td>
<td>Up to approximately 47</td>
</tr>
<tr>
<td></td>
<td>3.0</td>
<td>Until card is full</td>
</tr>
</tbody>
</table>

- The frame rate and number of frames per burst may vary depending on the type of memory card used.
- The frame rate varies with shooting conditions and the number of images recorded.

### Focus

- **Mode**: Single or continuous AF; manual focus with focus ring
- **Focus-area selection**: Multi, area with focus area size selection; 49 (7 × 7) areas available in viewfinder and LCD monitor
- **Autofocus system**: Intelligent hybrid AF (TTL contrast-detect/phase-detection AF) with AF-assist illuminator

### White balance

Custom, color temperature selection, auto, direct sunlight, shade, daylight fluorescent, warm white fluorescent, cool white fluorescent, incandescent, underwater

### Self-timer

Off, 2 sec., 10 sec.

### Flash mode

Auto, fill flash, off, slow sync, rear-curtain sync, commander (red-eye removal off); auto with red-eye removal, fill flash with red-eye removal, off, slow sync with red-eye removal, rear-curtain sync with red-eye removal, commander (red-eye removal on)

### Hot shoe

Accessory shoe with TTL contacts

### Viewfinder

0.5-in., 2,360k-dot color OLED viewfinder with diopter adjustment (–4 to +2 m⁻¹); magnification 0.77 × with 50 mm lens (35 mm format equivalent) at infinity and diopter set to –1.0 m⁻¹; diagonal angle of view approximately 38° (horizontal angle of view approximately 31°); eye point approx. 23 mm; frame coverage approx. 100%

### LCD monitor

3.0-in./7.6 cm., 1,040k-dot color LCD monitor; frame coverage approx. 100%, tilting

### Movies

- **HD 1920 × 1080 60fps**: Frame size 1,920 × 1,080 (1080p); 60 fps; stereo sound
- **HD 1920 × 1080 30fps**: Frame size 1,920 × 1,080 (1080p); 30 fps; stereo sound
- **HD 1280 × 720 60fps**: Frame size 1,280 × 720 (720p); 60 fps; stereo sound
- **HD 1280 × 720 30fps**: Frame size 1,280 × 720 (720p); 30 fps; stereo sound

<td>Approx. 77 g/2.7 oz., excluding battery</td>
</tr>
</tbody>
</table>

Weight and dimensions vary with the country or region of sale. Labels, menus, and other displays may differ from those on the actual camera.
Specifications

■ Notices

• Specifications subject to change without notice; for the latest information, visit http://www.fujifilm.com/products/digital_cameras/index.html. FUJIFILM shall not be held liable for damages resulting from errors in this manual.
• Although the viewfinder and LCD monitor are manufactured using advanced high-precision technology, small bright points and anomalous colors may appear, particularly in the vicinity of text. This is normal for this type of LCD display and does not indicate a malfunction; images recorded with the camera are unaffected.
• Digital cameras may malfunction when exposed to strong radio interference (e.g., electric fields, static electricity, or line noise).
• Due to the type of lens used, some distortion may occur at the periphery of images. This is normal.
## Restrictions on Camera Settings
