

Secured Device Tool (SDT) is the software that works with **EP-BB** to log all communications between your multifunction device and our data centre. SDT aggregates these communication logs, systematically stores them, and makes them downloadable for your records. SDT is a useful tool for companies with high security requirements. Plus, **it's an add-on you can request at no extra cost!**

Full visibility

View aggregated communication logs from up to 500 connected devices

Full encryption

Logs are encrypted by HTTPS to prevent security threats

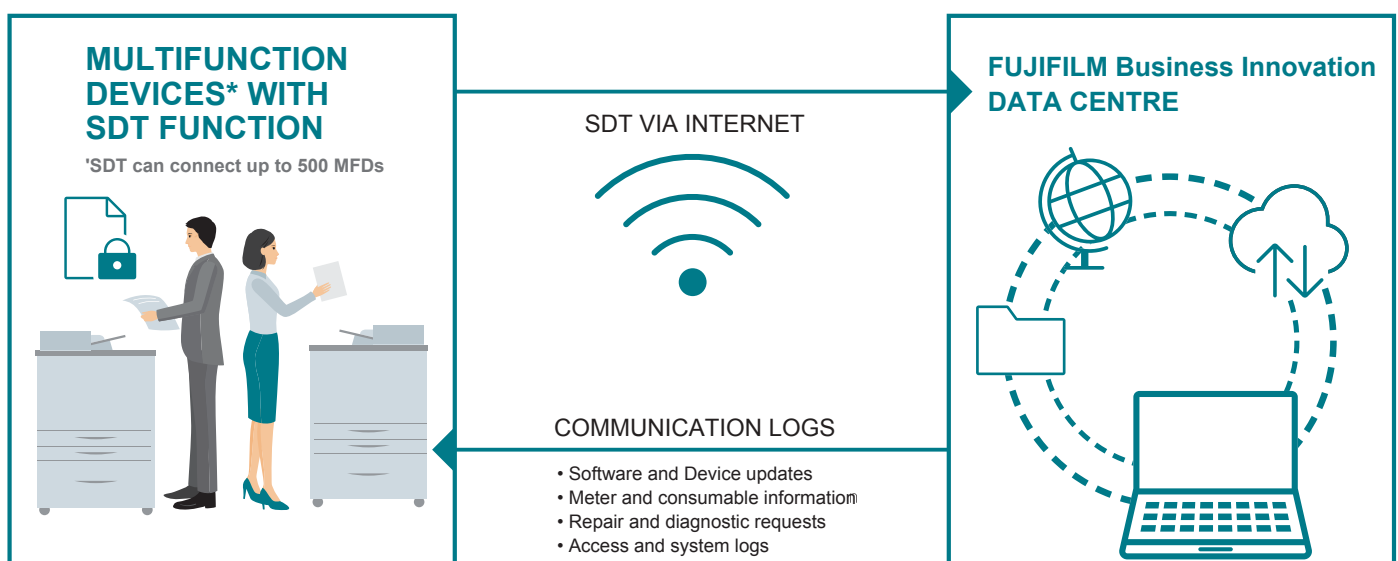

Accessible storage

Communication logs are stored for up to 6 months

No maintenance required

System automatically updates to the latest version

*The above diagram shows the configuration of the system between a customer network environment and the FUJIFILM Business Innovation Data Centre when using Secured Device Tool

Client Testimonial

Having a fleet of 30 multifunction devices required our personnel to spend more than 800 minutes a month per unit on maintenance. This includes checking the consumable status, device conditions, and coordinating device maintenance. With SDT, we are able to consolidate all MFD information, now requiring only 9-20 minutes of staff time! In addition, we can now easily monitor all network transmission pockets from SDT's communication logs and are assured that our data is secure.

- A Taiwanese Manufacturing Company

As a medical school and hospital dealing with many customers, our main concerns were information security and network stability. We had 225 multifunction devices on 5 separate subnetworks, but only one network could facilitate outbound communications. With FUJIFILM Business Innovation SDT, we can use our current server, plus all of our MFDs can now send communications through one channel. This makes it easier for us to monitor all transmission logs and consolidate maintenance info for all devices.

- A Medical School and Hospital in Thailand

Requirement for Secured Device Tool

Operating System	Hardware Requirement
Windows 8.1 Pro (x86/x64)	CPU: Can be supported above OS
Windows 8.1 Enterprise (x86/x64)	Memory: More than 1 GB 32bit or More than 2GB 64bit
Windows 10 Pro (x86/x64)	HardDisk: More than 1 GB available space
Windows 10 Enterprise (x86/x64)	Display: More than 1024x 768 pixel (Only needed for during installation)
Windows Server 2012 Standard (x64)	Other hardware: CD-ROM Drive during installation
Windows Server 2012 R2 Standard (x64)	Network: Ethernet 10/100/1 OOOBASE-TX
Windows Server 2016 Standard (x64)	Keyboard/mouse: PS/2 or USB
Software	
Microsoft Internet Information Services 8.0 (Windows Server 2012x64)	
Microsoft Internet Information Services 8.5 (Windows 8.1, Windows Server 2012 R2 (x64))	
Microsoft Internet Information Services 10.0 (Windows 10, Windows Server 2016x64, Windows Server 2019x64)	
Below software will be installed by Secured Device Tool installer when it's not installed.	
Microsoft .NET Framework 4.8 redistributable package	
Microsoft Visual C++(R) 2015 redistributable package	
Restriction/Notification	
Secured Device Tool is free software.	
Secured Device Tool need to be installed by customer.	
It will be charged by our subsidiary company when customer want to request us to install it.	
The server/PC which is installed Secured Device Tool need to be prepared by customer.
