Fore Edge Trim refers to the trimming of the side opposite to the spine.

書口裁切指書脊對面一端的裁切。

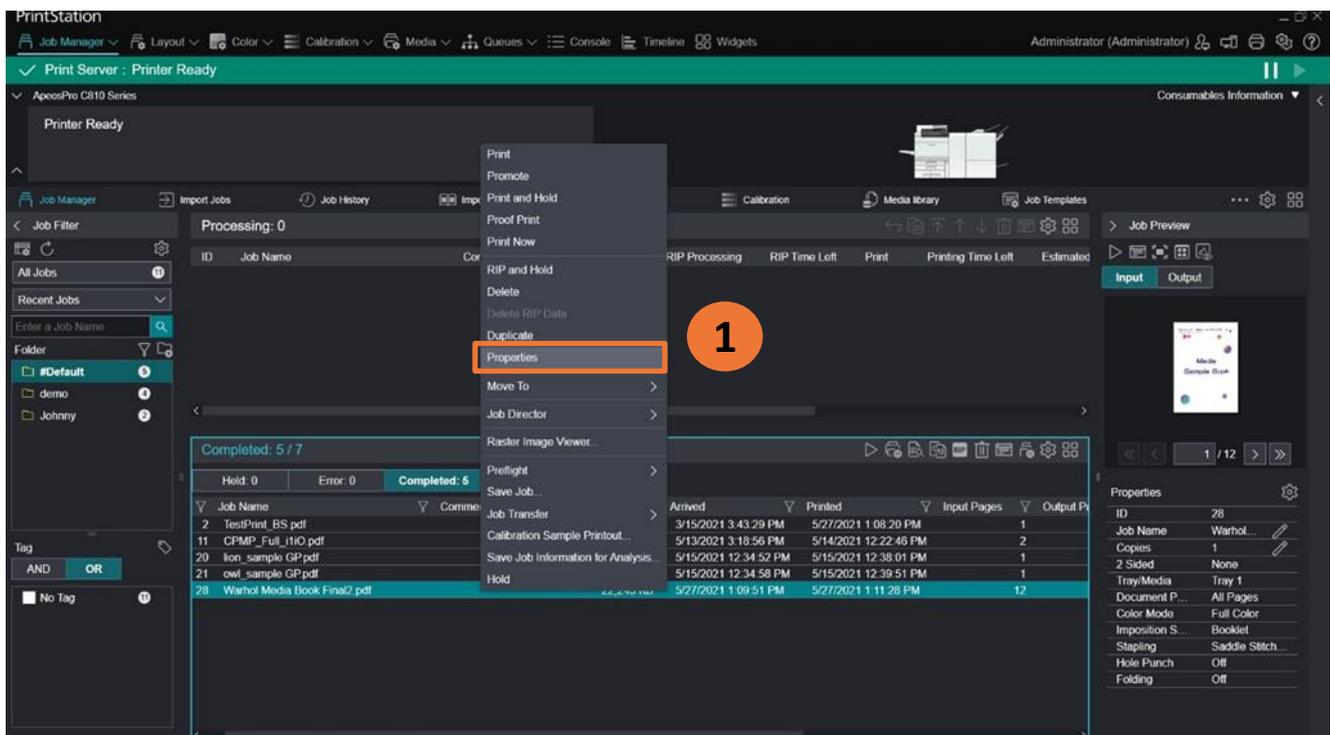

* This feature can be applied together with Back & Front Trim (refer to Chapter 2.2).

* 這個設定可以與上下裁切同用 (見第 2.2 章)。

Two trim types are available:

1) Finished Size

The measurement of the trimmed-out area.

Finished Size and Bleed are complementary to each other. That means when Finished Size increases, Bleed decreases (and vice versa).

Click [OK] to save.

選擇其中一款設定：

1) 設定成品尺寸

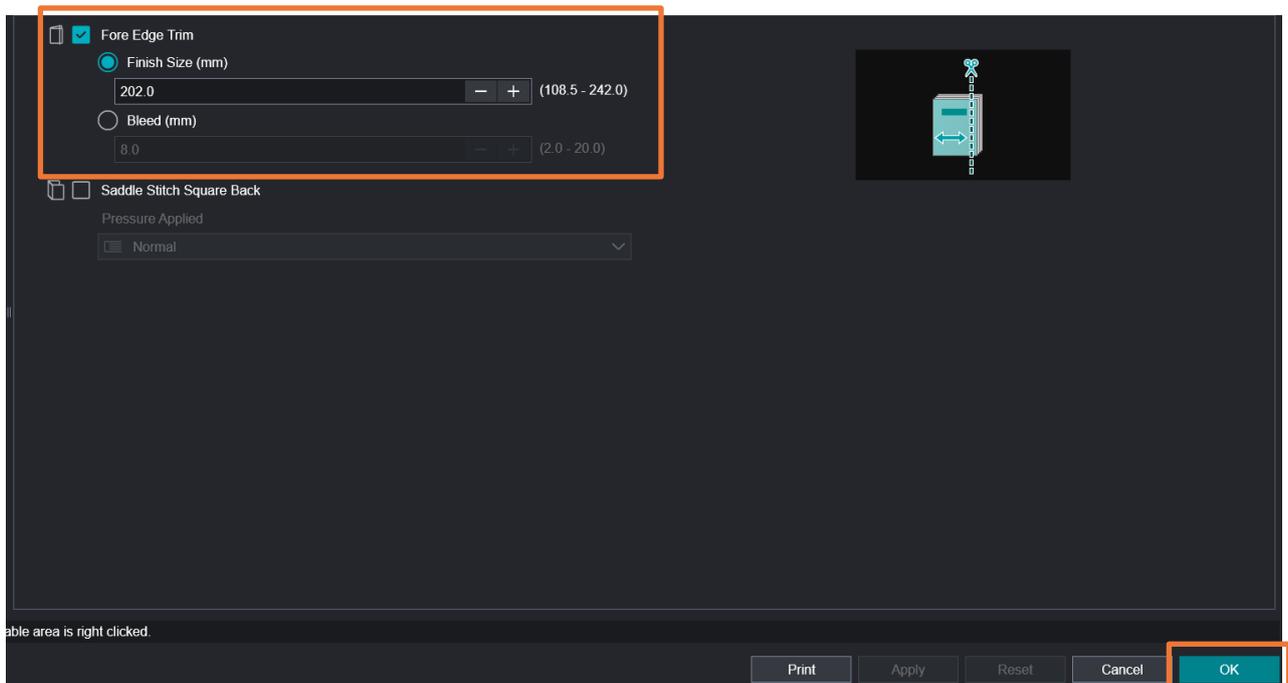

裁切後輸出文件範圍的長度

2) 指定裁切寬度

裁切出來的部份

以上兩款數值此消彼長，例如設定成品尺寸增加，則指定裁切寬度減少。反之亦然。

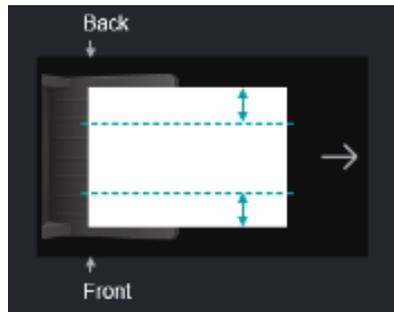

最後按 [確定] 儲存。

2.2 BACK & FRONT TRIM 上下裁切

Back Trim & Front Trim refer to the trimming of the two sides adjacent to the spine.

上下裁切指輸出文件上端和下端 (毗連書脊) 的裁切。
