

Fiery EC11 vs EC12

FUJIFILM® Business Innovation offers two Fiery® servers designed for the Revoria Press™ EC1100: Fiery EC11 and EC12. This document will help you identify the correct solution for your high production environment.

When to choose Fiery EC11 over EC12

FASTER PROCESSING SPEED

Fiery EC11 features **Fiery HyperRIP**, an exclusive Fiery technology that helps achieve uninterrupted production and expands performance with parallel job processing power. With HyperRIP, the Fiery server can split a single job into eight logical parts for parallel processing, or it can RIP multiple jobs simultaneously.

Plus, **Fiery EC11 is nearly 2x faster** compared to Fiery EC12. It provides more power to cost-effectively handle the additional processing required to manage complex files with multiple layers, transparencies, and overprints, making it the best choice for demanding production environments and future-proofing your investment.

OPERATORS NEED TO MAKE LATE-STAGE EDITS AND CORRECTIONS TO FILES

In demanding print environments, operators need to be able to easily perform late-stage edits to adjust colours and preview full raster files to ensure they are error-free. **Fiery EC11 comes standard with Fiery Graphic Arts Pro Package** to identify and correct print problems before they result in rejected jobs and waste. Key features include:

- **Fiery Preflight Pro:** The ultimate set of PDF preflight checks, Fiery Preflight Pro allows users to verify file compliance against industry standards and identify potential errors in files, which can then be viewed in the interactive Preflight Pro Report.
- **Fiery Spot Pro:** Ensure that brand colours are reproduced correctly, every time. With Fiery Spot Pro, users get the ability to create a spot colour alias, import/export spot colour libraries as .ase files, edit spot colours in a specific job, optimise all spot colours at once, and more.
- **Fiery ImageViewer:** Inspect files for errors before printing a single page - no need to re-RIP before printing. Or, edit colour curves and quickly make colour replacements. And, export soft proofs in less than a minute.
- **Fiery Postflight:** Visual tool to identify page element errors.
- **Fiery Control Bar:** Create customised process control bars.

When to choose Fiery EC11 over EC12 (continued)

MEET INCREASING DEMAND FOR VARIABLE DATA PRINTING

Ensure that you are prepared to meet the increasing demand for variable data printing (VDP) over the life of the lease. Both Fiery EC11 and EC12 support all leading VDP formats and work with all leading variable data composition software. However, the **additional speed of Fiery EC11** enables printing at maximum productivity for even the most complex VDP jobs.

TAKE CONTROL OF COLOUR MANAGEMENT

Fiery EC11 comes standard with Fiery Color Profiler Suite and an ES-3000 spectrophotometer. This combination delivers wizard-driven calibration (including G7), profile creation, optimisation, and verification, through to expert-level profiling control, editing, and enhancement, providing market-leading tools to ensure optimal colour quality for every stage of the printing workflow.

A CENTRALISED PRODUCTION WORKSPACE FOR OPERATORS

Fiery EC11 includes the [Fiery NX Station GL](#), a compact, centralised workstation for Fiery external servers. It features a 22" display, Fiery Ticker, work stand, and a wireless keyboard and mouse

What both servers offer

POWERFUL MAKEREADY TOOLS

Both servers come standard with **Fiery Impose**, the intuitive visual imposition software, and **Fiery JobMaster**, which offers media assignment, chapter definition, advanced page numbering, fully visual tab insertion and design, finishing, scanning, and powerful late-stage editing features.

BUILT-IN PRINT INTELLIGENCE

Both Fiery servers include advanced job management tools to maximise the printer throughput. **[Fiery JobExpert™](#)** helps reduce setup time by dynamically analysing the incoming production file, finding issues quickly — including those that cannot be detected by an operator — automatically setting the optimal Fiery job settings, and processing jobs to achieve the best possible print quality.

What both servers offer (continued)

OUT-OF-THE-BOX COLOUR ENHANCEMENTS WITH FIERY EDGE

Both Fiery servers include Fiery Edge™ colour profiles, which deliver improvements in many key colour quality areas for digital print producers.

Fiery Edge helps produce the smoothest colour transitions and blends. It provides maximum shadow details in neutral and chromatic areas. Plus, it gives users controls to produce more saturated, vivid, and stunning print results. Use Fiery Intensify™, a rendering intent innovation that is part of Fiery Edge, to boost colour and saturation, while maintaining neutral grays and perfect skin tones.

INTEGRATION WITH JDF AND WORKFLOW SOLUTIONS

Both Fiery servers allow connectivity with leading web-to-print and MIS solutions, as well as with popular industry workflow solutions such as FUJIFILM XMF Workflow, Heidelberg® Prinect, Kodak® PRINERGY, Agfa® Apogee, and SCREEN EQUIOS. This integration enables job information to flow through the system faster and more efficiently to reduce human error and save time.

A PURE PDF WORKFLOW

Both Fiery servers integrate Adobe® PDF Print Engine technology to offer a choice of end-to-end native PDF or legacy workflows. This provides consistency and flexibility from design to output in digital and offset print environments.

POWERED BY
Adobe PDF Print Engine

ACCURATE, CONSISTENT COLOUR

Both servers render all combinations of colour spaces and transparency blends correctly using industry-standard tests such as Altona Test Suite 2 and Ghent PDF Output Suite version 5.0. They offer default settings that maximise performance with the best colour quality right out of the box. They can also sharpen images, smooth flesh tones, and enhance the natural colour of any photo in a document with the latest version of the fully integrated Fiery Image Enhance Visual Editor.

COMPATIBLE WITH INDUSTRY STANDARDS

Fiery servers support most industry VDP formats, including:

- Fiery FreeForm™ Plus (output from Fiery FreeForm Create, an included, standalone VDP application)
- PPML 2.0/2.2/3.0
- PDF/VT 1 and 2
- Creo VPS™

Feature	Fiery EC11	Fiery EC12
