1. FEATURES AND USES

FUJICOLOR nexia A 200 is an Advanced Photo System daylight color negative film with an ISO speed rating of 200. It adopts a PEN (polyethylene naphtalate) base for higher film durability. This film yields the best results when used in conjunction with FUJICOLOR papers.

**Features**

- **Color Reproduction of Great Vividness**
  - Great vividness across the entire spectrum, including dynamic reds, blues and yellows
- **Accurate Color Reproduction**
  - Enhanced realism in the reproduction of difficult-to-create colors, including violet and various green
- **Improved Skin Tone Reproduction**
  - Beautiful, natural skin tone rendition
- **Excellent Grain Quality**
  - Extremely fine grain for a medium-speed film, providing consistently high image quality even in enlargements
- **Excellent Exposure Suitability even under Fluorescent Lighting**
  - Accurate color reproduction even under fluorescent lights

It requires no color-compensating filters when used under daylight conditions or with an electronic flash.

2. SPEED

<table>
<thead>
<tr>
<th>Light Source</th>
<th>Speed</th>
<th>Filter</th>
</tr>
</thead>
<tbody>
<tr>
<td>Daylight</td>
<td>ISO 200/24°</td>
<td>None</td>
</tr>
<tr>
<td>Tungsten Lamps</td>
<td>ISO 50/18**</td>
<td>LBB-12** (or Kodak No. 80A)</td>
</tr>
</tbody>
</table>

* Indicates the effective speed resulting from designated filter use. ** Fuji Light Balancing Filter

3. EXPOSURES, PRODUCTION NUMBER AND DX CODE

Exposures .......... 15, 25 and 40 exp.
Production Number .... BB51 and above
DX Code ................. 33 - 5

4. EXPOSURE GUIDE

Use an exposure meter for exposure determination. If a meter is not available, refer to the following table.

**Daylight Exposure Guide Table**

<table>
<thead>
<tr>
<th>Light Conditions</th>
<th>Seashore or Snow Scenes</th>
<th>Bright Sunlight</th>
<th>Hazy Sunlight</th>
<th>Cloudy Bright</th>
<th>Cloudy Day or Open Shade</th>
</tr>
</thead>
<tbody>
<tr>
<td>Lens Aperture</td>
<td>f/16</td>
<td>f/16</td>
<td>f/11</td>
<td>f/8</td>
<td>f/5.6</td>
</tr>
<tr>
<td>Shutter Speed (second)</td>
<td>1/500</td>
<td></td>
<td>1/250</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

- The foregoing settings are for 2 hours after sunrise and 2 hours before sunset.
- Provide lens openings 1/2 stop smaller during the summer and 1/2 stop larger during the winter.
- Excessively bright (or dark) or backlighted subjects may require plus or minus 1 stop lens opening adjustments.

**Low Light Exposure Guide Table**

<table>
<thead>
<tr>
<th>Light Conditions</th>
<th>Fine Weather Daytime Indoor Scenes</th>
<th>Nighttime Indoor Scenes (under Fluorescent Light)</th>
<th>Evening Scenes</th>
<th>Night Scenes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Lens Aperture</td>
<td>f/2.8 to 4</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Shutter Speed (second)</td>
<td>1/30</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**NOTE**

Since light intensities for indoor and night scenes vary widely from location to location, the data above should be used only as a guide.

5. EXPOSURE UNDER VARIOUS LIGHT CONDITIONS

**Daylight**

Even when exposed under morning or evening twilight conditions or when color temperatures are low, no special filter use is needed because color balancing will be done during printing.
**Electronic Flash**

- Electronic flash produces light similar to daylight, so filters are not needed. However, the possibility of undesirable effects on color balance, due to various factors (differences in equipment, amount of use, etc.) should be taken into consideration and test exposure made.
- If shutter speeds slower than 1/60 second are used, light from non-flash sources, such as room lighting, may cause color imbalances. Make test exposures.
- The use of a flash meter is advisable, but the following formula can also be used to obtain satisfactory lens opening.

\[
\text{Lens Aperture (f-number)} = \left( \frac{\text{ISO 200 Electronic Flash Guide Number}}{\text{Electronic Flash-to-Subject Distance (meters or feet)}} \right)
\]

- Set the film speed at ISO 200. Since the amount of light reflected onto subjects from surrounding surfaces will differ with the conditions, refer to the flash unit instructions.

**Daylight Photoflood/Photo-Reflector Lamps**

- Daylight-type photoflood or photo-reflector lamp output tends to be lower than that indicated by an exposure meter, so it is advisable to compensate for this by increasing exposure time or the lens opening. Whenever possible, test exposures are recommended.
- Other factors requiring consideration when determining the exposure time, are lamp configuration, use duration and line voltage, as they may affect lamp output and color balance.

**Fluorescent Lamps & High-Intensity Discharge Lamps**

- For best results, the following combinations of color compensating filters are recommended. However, for exacting work, test exposures are advisable.

<table>
<thead>
<tr>
<th>Lamp Type</th>
<th>Fluorescent</th>
<th>High-intensity Discharge</th>
</tr>
</thead>
<tbody>
<tr>
<td>Daylight (D)</td>
<td>Cool White (C.W)</td>
<td>Deluxe White Mercury</td>
</tr>
<tr>
<td>White (W)</td>
<td>Warm White (W.W)</td>
<td>Clear Mercury</td>
</tr>
<tr>
<td>Color Compensating Filters*</td>
<td>10M +10Y</td>
<td>30C +30M</td>
</tr>
<tr>
<td>Exposure Corrections**</td>
<td>+1/3</td>
<td>+1</td>
</tr>
</tbody>
</table>

* Fuji Color Compensating Filters (or Kodack CC Filters)
** Exposure Correction values include filter exposure factors. These values are added to unfiltered exposure meter readings. "+" followed by number = required increase in lens opening.

- When the fluorescent lamp characteristics are unknown, to obtain generally acceptable results, use a 30M compensating filter and open the lens one stop (+1).

**Tungsten Lamps**

Fuji Light Balancing Filter LBB-12 (or Kodak No. 80A) is recommended along with a 2 lens stop increase, when using 3200 K tungsten lighting.

**6. LIGHTING EQUIPMENT**

The conditions of umbrellas, reflectors, diffusers and like devices, may influence photographic light quality. Periodically check lighting equipment for deterioration.

**7. LONG EXPOSURE COMPENSATION**

No exposure or color balance compensation is required for exposures within a 1/4000 to 2 second shutter speed range. However, for exposures of 4 seconds or longer, provide the compensations indicated below.

<table>
<thead>
<tr>
<th>Exposure Time (sec)</th>
<th>1/4000 — 2</th>
<th>4</th>
<th>16</th>
<th>64</th>
</tr>
</thead>
<tbody>
<tr>
<td>Exposure Corrections*</td>
<td>Unnecessary</td>
<td>+1/3</td>
<td>+2/3</td>
<td>+1</td>
</tr>
</tbody>
</table>

* "+" followed by number = required increase in lens opening.

**8. FILM HANDLING**

- Expose film before the expiration date indicated on the film package and process promptly after exposure.
- Expose camera-loaded film before the expiration date and process immediately.
- The following cartridge markings indicate the current status of the film. Make sure to verify the film’s status before loading the cartridge.

| 1 | Unexposed |
| 2 | Partially exposed (use of film can be resumed on some cameras) |
| 3 | Fully exposed but unprocessed |
| 4 | Processed |
The leading end (tongue) of the film remains inside the cartridge until the cartridge is loaded into the camera, at which time it is automatically extracted and the camera readied for the first exposure. Film cartridges should never be incorrectly handled, such as opening the light-lock door or changing the status indicator by rotating the cartridge spool. The irreversible processed indicator, next to the status markings, should never be broken off until the film has been processed.

**NOTE** This film has a magnetic strip on which exposure data are recorded for later use when prints of special quality are ordered and also for imprinting exposure date on print.

- X-ray equipment, used to inspect carry-on baggage at airport terminals, can cause film fogging. Repeated inspections increase this possibility, so both exposed and unexposed films should be removed for manual inspection.
- Film fogging may occur near X-ray equipment used in hospitals, factories, laboratories and other locations. Always keep film away from possible sources of radiation.
- Contains a magnetic strip. Keep away from magnetic fields.

### 9. FILM STORAGE

#### Unprocessed Film

- Storing exposed or unexposed film under high temperature and humidity conditions will cause adverse speed, color balance and physical property changes. Store film under the following conditions.
  - Ordinary Storage: Protect from heat.
  - Long-term Storage: Below 0°C (32°F)
- Building materials, finishes used on newly-manufactured furniture and bonding agents may produce gases which affect photographic film. Do not store film, lightproof boxes of film, loaded cameras or film holders under these conditions.
- Before use, allow films to stand at room-temperature over 1 hour. Opening the package/box while film is cold may cause harmful condensation.

#### Processed Film

Processed negative strips are returned to the customer inside the cartridge. Exposure to light, high temperature and humidity can cause color changes in processed films. Therefore, store in dark, dry, cool and well ventilated locations under the following conditions.

- **General Storage:** 25°C (77°F) at 30 to 60% RH
- **Long-term Storage:** 10°C (50°F) at 30 to 50% RH

**NOTE** As with all color dyes, those used in this film will discolor or fade with time.

### 10. REORDERING BY INDEX PRINT

Each cartridge has an ID number and this is also imprinted on the back of each print, as well as on the index print. When reordering a print, all that is required is the frame number on the index print as it contains all the images made from the roll of negatives. (In the Advanced Photo System, an index print is included when prints are ordered with film processing.)

### 11. PROCESSING

This film is intended for processing in Fujifilm Process CN-16X, CN-16Q, CN-16FA, CN-16L, or Kodak Process C-41.

### 12. JUDGING EXPOSURE RESULT

nexia A 200 exposure results can be accurately predicted by using an electronic densitometer equipped with Status M filters. An 18% gray card, receiving the same illumination as the subject, when read through the RED filter should render density readings between 0.79 and 0.98 (for exposures under recommended lighting and with optimal film processing).
13. **FILM STRUCTURE**

- Protective Layer
- Blue Sensitive Layer Containing Colorless Yellow Coupler
- Yellow Filter Layer
- Green Sensitive Layer Containing Yellow Colored Magenta Coupler
- Cyan Sensitive Layer
- Interlayer
- Red Sensitive Layer Containing Red Colored Cyan Coupler
