This manual will show you how to use your FUJIFILM DIGITAL CAMERA FinePix S1000fd correctly. Please follow the instructions carefully.
Warning

To prevent fire or shock hazard, do not expose the unit to rain or moisture.

For customers in the U.S.A.

Tested To Comply
With FCC Standards
FOR HOME OR OFFICE USE

FCC Statement
This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

CAUTION
This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:
— Reorient or relocate the receiving antenna.
— Increase the separation between the equipment and receiver.
— Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
— Consult the dealer or an experienced radio/TV technician for help.

You are cautioned that any changes or modifications not expressly approved in this manual could void the user’s authority to operate the equipment.

Notes on the Grant:
To comply with Part 15 of the FCC Rules, this product must be used with a Fujifilm-specified ferrite-core A/V cable, USB cable, and DC supply cord.

For customers in Canada

CAUTION
This Class B digital apparatus complies with Canadian ICES-003.

Please read the Safety Notes (separate note “Notes and Cautions”) and make sure you understand them before using the camera.
Before opening the CD-ROM provided by Fujifilm Corporation, please read this end user license agreement carefully. Only if you agree with this agreement, should you use the software recorded on the CD-ROM. By opening the package, you accept and agree to be bound by this agreement.

End User License Agreement

This End User License Agreement ("Agreement") is an agreement between Fujifilm Corporation ("FUJIFILM") and you, which sets forth the terms and conditions of the license granted for you to use the software provided by FUJIFILM.

The CD-ROM contains third party software. In case a separate agreement is provided by a third party supplier for its software, the provisions of such separate agreement shall apply to the use of such third party software, prevailing over those of this Agreement.

1. Definitions.
   (a) "Media" means the CD-ROM titled "Software for FinePix" - which is provided to you together with this Agreement.
   (b) "Software" means the software which is recorded on Media.
   (c) "Documentation" means the operation manuals of Software and other related written materials which are provided to you together with Media.
   (d) "Product" means Media (including Software) and Documentation collectively.

2. Use of Software.
   FUJIFILM grants to you a nontransferable, nonexclusive license:
   (a) to install one copy of Software onto one computer in binary machine executable form;
   (b) to use Software on the computer onto which Software is installed; and
   (c) to make one backup copy of Software.

   3.1 You shall not distribute, rent, lease or otherwise transfer all or any part of Software, Media or Documentation to any third party without FUJIFILM’s prior written consent. You also shall not sublicense, assign or otherwise transfer all or any part of the rights granted to you by FUJIFILM under this Agreement without FUJIFILM’s prior written consent.
   3.2 Except as expressly granted by FUJIFILM hereunder, you shall not copy or reproduce all or any part of Software or Documentation.
   3.3 You shall not modify, adapt or translate Software or Documentation. You also shall not alter or remove copyright and other proprietary notices that appear on or in Software or Documentation.
   3.4 You shall not, or shall not have any third party, reverse-engineer, decompile, or disassemble Software.

4. Ownership.
   All copyrights and other proprietary rights to Software and Documentation are owned and retained by FUJIFILM or the third party suppliers as indicated on or in Software or Documentation. Nothing contained herein shall be construed, expressly or implicitly, as transferring or granting any right, license, or title to you other than those explicitly granted under this Agreement.

5. Limited Warranty.
   FUJIFILM warrants to you that Media is free from any defect in material and workmanship under normal use for ninety (90) days from the date of your receipt of Media. Should Media not meet the foregoing warranty, FUJIFILM shall replace such defective Media with other Media bearing no defect. FUJIFILM’s entire liability and your sole and exclusive remedy with regard to any defect in Media shall be expressly limited to such FUJIFILM’s replacement of Media as provided herein.

   Except as provided in Section 5 herein, FUJIFILM provides product "as is" and without warranties of any kind, express or implied. FUJIFILM shall make no warranty, express, implied or statutory, as to any other matters, including, but not limited to, non-infringement of any copyright, patent, trade secret, or any other proprietary rights of any third party, merchantability, or fitness for any particular purpose.

7. Limitation of Liability.
   In no event shall FUJIFILM have any liability for any general, special, direct, indirect, consequential, incidental, or other damages (including damages for loss of profits or lost savings) incurred from the use of or inability to use product even if FUJIFILM has been advised of the possibility of such damages.

8. No Export.
   You acknowledge that neither Software nor any part thereof, will be transferred, or exported to any country or used in any manner in violation of any export control laws and regulations to which Software is subject.

   In case you breach any of the terms and conditions hereof, FUJIFILM may immediately terminate this Agreement without any notice.

10. Term.
    This Agreement is effective until the date when you cease to use Software, unless earlier terminated in accordance with Section 9 hereof.

11. Obligation upon termination.
    Upon termination or expiration of this Agreement, you shall, at your own responsibility and expense, delete or destroy immediately all Software (including its copies), Media and Documentation.

    This Agreement shall be governed by and construed in accordance with laws of Japan.

This product comes with batteries. When these are empty, you shouldn’t throw them away but deliver them as domestic chemical refuse.
Disposal of Electric and Electronic Equipment in Private Households

Disposal of used Electrical & Electronic Equipment (Applicable in the European Union and other European countries with separate collection systems)

This symbol on the product, or in the manual and in the warranty, and/or on its packaging indicates that this product shall not be treated as household waste. Instead it should be taken to an applicable collection point for the recycling of electrical and electronic equipment.

By ensuring this product is disposed of correctly, you will help prevent potential negative consequences to the environment and human health, which could otherwise be caused by inappropriate waste handling of this product.

If your equipment contains easy removable batteries or accumulators please dispose these separately according to your local requirements.

The recycling of materials will help to conserve natural resources. For more detailed information about recycling of this product, please contact your local city office, your household waste disposal service or the shop where you have purchased the product.

In Countries outside the EU:
If you wish to discard this product, please contact your local authorities and ask for the correct way of disposal.

### Usable Memory Cards

You can use the xD-Picture Card, the SD Memory Card and the SDHC Memory Card with the FinePix S1000fd. In this Owner’s Manual, these cards are expressed as “Memory Card” and “SD Memory Card”.

About this Manual

About marks

⚠️ CAUTION
This mark denotes issues that may affect the camera’s operation.

✔️ CHECK
This mark denotes points to notice in the camera’s operation.

🔍 MEMO
This mark denotes additional topics that complement the basic operating procedures.

Usable Memory Cards
You can use the xD-Picture Card, the SD Memory Card and the SDHC Memory Card with the FinePix S1000fd. In this Owner’s Manual, these cards are expressed as “Memory Card” and “SD Memory Card”.

4-direction (▲▼◄►) button
Up, down, left, and right are indicated by black triangles in the Owner’s Manual. Up or down is shown as ▲ or ▼, and left or right is shown as ◄ or ►.

About the illustration for the LCD monitor display
In this manual, the illustration for the LCD monitor display is simplified.

Note
In this manual, the menu names or messages displayed in the LCD monitor appear in square brackets([ ]).
Accessories Included

• **AA-size Alkaline Batteries (LR6) (4)**
  - Shoulder strap (1)
  - Lens cap (1 set)
  - A/V cable (1)
  - USB cable (1)

• **CD-ROM (1)**
  - Software for FinePix

• **Owner’s Manual (this manual) (1)**
• **Notes and Cautions (1)**

- **8** Protection (p.98)

FinePix S1000fd has internal memory that can store images without Memory Card. **IN** appears on the screen when the internal memory is active.
Attaching the Strap and Lens Cap

**Attaching the strap**

1. Attach the strap to the strap mounts on the camera. Once you have attached both ends of the strap, check carefully to make sure that the strap is firmly secured.

2. Attach the lens cap cord to the lens cap.

3. Pull the lens cap cord through the strap.

⚠️ **CAUTION**
- Attach the strap correctly to prevent dropping the camera.
- Attach the lens cap cord to prevent losing the lens cap.

**Attaching the lens cap**
Getting Ready

Loading the Batteries

Batteries are required to operate the digital camera. At first, load the batteries in the camera.

Compatible batteries
AA-size alkaline batteries (4) AA-size Ni-MH rechargeable batteries (4) (sold separately) or AA-size lithium batteries (4) (sold separately)

⚠️ CAUTION

- Never use the following types of batteries, as they could cause serious problems such as battery fluid leakage or overheating:
  1. Batteries with split or peeling outer casings
  2. Combinations of different types of batteries or new and used batteries together
- Do not use manganese or Ni-Cd batteries.
- Use the same brand and grade AA-size alkaline batteries as those supplied with the camera.
- The batteries shall not be exposed to excessive heat such as sunshine, fire or the like.

1. Slide the lock release catch to open the battery cover.

✔ CHECK

Check that the camera is turned off before opening the battery cover.

⚠️ CAUTION

- Do not open the battery cover while the camera is on. This could damage the Memory Card or ruin the image files on the Memory Card.
- Do not apply force to the battery cover.

Continued ➞
2 Load the batteries correctly as indicated by the polarity icons.

⚠️ CAUTION
Match the polarity icons (+ and −) of the batteries to those on the inside of the battery cover.

3 Press on the battery cover to push the batteries down. Slide the cover closed.

☑️ CHECK
Make sure to close the battery cover securely until you hear a click.

ImageButton

MEMO
If you want to use the camera powered by AC, the AC power adapter, AC-5VX (sold separately), and DC coupler, CP-04 (sold separately), are necessary. Refer to the manual provided with the AC-5VX and CP-04 for instructions.
Checking the battery charge

Turn the camera on and check the battery charge.

1. There is ample battery charge. (Not displayed)
2. There is insufficient charge left in the batteries. The batteries will soon run out. Have a new set of batteries ready. (Lit red)
3. The batteries are depleted. The display will shortly go blank and the camera will stop working. Replace or recharge the batteries. (Blinking red)

Notes on batteries

- Soil, such as fingermarks on the poles of the batteries, can shorten time for which the batteries can be used.
- The time for which AA-size alkaline batteries (referred to hereafter simply as alkaline batteries) can be used varies depending on the brand. Some brands of alkaline batteries may stop providing power more quickly than those supplied with the camera. Note also that due to their nature, the time for which alkaline batteries can be used decreases in cold conditions (0°C to +10°C/+32°F to +50°F). For this reason, it is better to use AA-size Ni-MH batteries.
- Due to the nature of the battery, the battery level warning ( , ) may appear early when the camera is used in cold locations. Try warming the batteries in your pocket or a similar location before use.
- Depending on the battery type and the level of charge in the batteries, the camera may run out of power without first displaying a battery level warning. This is particularly likely to happen when batteries that have run out of charge once are re-used.
- Depending on the camera mode, the transition from to may occur more quickly.
- Use Fujifilm Battery charger (sold separately) to charge AA-size Ni-MH batteries.
- When first purchased or if left unused for a long period, the amount of time which AA-size Ni-MH batteries can be used may be short.
- Battery power consumption varies greatly depending on use. When you change to Playback mode from Shooting mode, may not occur, however, may suddenly blink red and the camera may stop operation.
- See “Notes and Cautions” (included) for more information.
Loading the Memory Card

Although you can store pictures in the camera’s internal memory, you can store many more images on the Memory Card (sold separately). You can use the xD-Picture Card and the SD Memory Card with the FinePix S1000fd. In this Owner’s Manual, these cards are expressed as “Memory Card”.

SD Memory Cards/SDHC Memory Cards
They are operation-checked at FUJIFILM Corporation. Manufacturer: SanDisk

MEMO
• Compatible models will be updated in our website:
• Depending on the SD Memory Card, recording of movies may be interrupted.
  Use of above mentioned SD Memory Cards are recommended.
• The camera is not compatible with multimedia cards.

1 Open the battery cover.

CAUTION
Do not open the battery cover while the camera is on. This could damage the Memory Card or ruin the image files on the Memory Card.

2 Insert a Memory Card.
(xD-Picture Card)
Align the gold marking with the gold contact area, then insert an xD-Picture Card completely.

(SD Memory Card)
Align the gold marking with the gold contact area, then insert a SD Memory Card completely.
CAUTION
Be sure to unlock the protection of the SD Memory Card before inserting it. If it is locked, recording/deleting images, as well as formatting are not available. To unlock the protection, slide the switch back, and the SD Memory Card will work normally.

CAUTION
- A new SD Memory Card or a card previously used on a PC or any device other than the camera should be formatted (→p.117) on the camera before use.
- Do not use a miniSD adaptor or a microSD adaptor which have exposed contact areas on the back. Use of these adaptors may cause a malfunction or damage due to the improper contacts.
- A miniSD adaptor or microSD adaptor bigger than SD Memory Card standard size may become stuck. Pulling out forcefully may cause a malfunction. In that case, contact your FUJIFILM dealer.

3 Close the battery cover.

How to replace the Memory Card

Push the Memory Card into the slot and then slowly remove your finger. The lock is released and the Memory Card is pushed out.

Continued ➔
Loading the Memory Card

⚠️ CAUTION

- When storing Memory Cards, make sure that they are kept out of the reach of children. A Memory Card could be swallowed and cause suffocation. If a child swallows a Memory Card, seek medical attention or call emergency number right away.
- If the Memory Cards is oriented incorrectly, it will not go all the way into the slot. Do not apply force when inserting a Memory Card.
- Note that the Memory Cards may spring out if you release your finger quickly from the card immediately after the lock is released.
- Operation of this camera is only guaranteed when it is used with FUJIFILM xD-Picture Card and operation-checked SD Memory Card (→p.18).
- See p.138 for information on the xD-Picture Card, SD Memory Card and the Internal Memory.

مشاركات

- The size of an image file varies depending on the subject. For this reason, the number recorded may not represent the actual number of frames.
- See p.154 for information on the standard number of available frames.

■ About internal memory

FinePix S1000fd has internal memory that can store images without Memory Card. IN appears on the screen when internal memory is active.

When a Memory Card (sold separately) is inserted
Record images: Record images to a Memory Card.
Playback images: Playback images in a Memory Card.

When a Memory Card (sold separately) is not inserted
Record images: Record images to internal memory.
Playback images: Playback images in internal memory.

■ About images in the internal memory

Images held in the camera’s internal memory may be corrupted or erased due to problems such as camera faults. Save your important data to another media (i.e., DVD-R, CD-R, CD-RW, hard disk, etc.). It is possible to transfer saved images on the internal memory to a Memory Card (→p.99).
Turning On and Off

Turning the camera on in Shooting mode

Slide the ON/OFF switch to turn the camera on in Shooting mode. Slide the ON/OFF switch again to turn the camera off.

MEMO Switching between the Shooting and Playback mode

Pressing \( \square \) when the camera is in Shooting mode switches the camera to the Playback mode. Pressing the shutter button switches the camera to the Shooting mode.

CAUTION

The ON/OFF switch does not completely disconnect the camera from its power supply.

Turning the camera on in Playback mode

Press \( \square \) for about 1 second to turn the camera on in Playback mode. Slide the ON/OFF switch to turn the camera off.

MEMO

Press the shutter button to switch to the Shooting mode.
Setting the language, date, and time

When using the camera for the first time after purchasing, the language, date, and time are cleared. Set the language, date, and time.

1 [言語/LANG.] screen appears when turning the camera on.

2 Set the date and time.

- Press ▲ or ▼ to select Year, Month, Day, Hour, or Minute.
- Press ▲ or ▼ to correct the setting.

MEMO

- Holding down ▲ or ▼ changes the numbers continuously.
- When the time displayed passes “12”, the AM/PM setting changes.
3 Change the date format.

1. Press ◀ or ▶ to select the date format.
2. Press ▲ or ▼ to set the format.
3. Always press MENU/OK after the settings are completed.

**Date format**
ex. December 1, 2008
[YY.MM.DD]: [2008.12.1]
[MM/DD/YY]: [12/1/2008]
[DD.MM.YY]: [1.12.2008]

---

**MEMO**

[START MENU] screen also appears when the batteries have been removed and the camera has been left for a long period. Once the AC power adapter and DC coupler has been connected or the batteries have been installed for 10 hours or more, the camera settings will be retained for roughly 24 hours even if both sources of power are removed.

**Auto power off function**

When the Auto power off function is active, if the camera is left unused for 2 or 5 minutes, this function turns the camera off (→p.118). To turn the camera back on, slide the ON/OFF switch. To playback images, press ▶ for about 1 second.
Correcting the Date and Time

1 Open the [SET-UP] menu.

   ① Press MENU/OK to open the menu.
   ② Press ▲ or ▼ to select [SET-UP].
   ③ Press ▶.

2 Display the [DATE/TIME] screen.

   ① Press ◀ or ▶ to select ①.
   ② Press ▼ to move to menu item.
   ③ Press ▲ or ▼ to select ② DATE/TIME.
   ④ Press ▶.

See “2 Set the date and time.” (→p.22).
Selecting the Language

1 Open the [SET-UP] menu.

- Press MENU/OK to open the menu.
- Press ▲ or ▼ to select [SET-UP].
- Press ▶.

2 Display the [言語/LANG.] screen.

- Press ◄ or ► to select 2.
- Press ▼ to move to menu item.
- Press ▲ or ▼ to select [言語/LANG.].
- Press ▶.

See “1 [言語/LANG.] screen appears when turning the camera on.” (→p.22).
Taking Pictures ([AUTO] AUTO Mode)

This section describes the basic operations.

1 Turn the camera on.
   ① Slide the ON/OFF switch.

   ② Set the Mode dial to [AUTO].

   ✔ CHECK
   Select 🌿 Macro mode to take close-up shots (→p.63).

2 Press the Flash pop-up button to pop-up the flash.

3 Switch the display.
   Press the EVF/LCD to alternate the display between the viewfinder (EVF) and the LCD monitor.

MEMO
The EVF/LCD selection is retained even when the camera is off or the mode setting is changed.
**Holding the camera correctly**
Brace your elbows against your sides and hold the camera with both hands. Using the viewfinder (EVF) allows for a steady arm position, preventing picture blur.

![Correct Camera Position](image)

**CAUTION**
- Moving the camera while shooting gives a blurred picture (camera shake). Hold the camera steadily with both hands.
- If the lens or flash is obscured by your fingers or the strap, or if the autofocus ring is touched when shooting, subjects may be out of focus or the brightness (exposure) of your shot may be incorrect.
- When the autofocus ring is held during operation, a warning message [ZOOM ERROR] is displayed. Then the lens will automatically refocus.

![Incorrect Camera Position](image)

Do not cover the lens or flash with your fingers.

**4 Focus on the main subject in the AF frame and press the shutter button down halfway.**

![Focus Frame](image)

**CHECK**
- **Focus on the subject**
  - Double beep is heard
  - Indicator lamp lit green
- **Not focus on the subject**
  - No sound
  - AF frame lit red
  - ![AF indicated]
  - Indicator lamp blinking green

**MEMO**
- The shutter button has a halfway point at which focus and exposure are automatically optimized before taking the picture by pressing fully down.
- When pressing the shutter button halfway, a lens operation sound may be heard.

*Continued ➤*
5 Press the shutter button fully.

Double beep  Click
Halfway pressed  Fully pressed

⚠️ CAUTION
When taking a picture using the flash, the image may disappear and go dark briefly due to flash charging. The indicator lamp blinks orange during charging.

🔍 MEMO
- When the subject is not in the AF frame, use AF/AE lock to take the picture (→p.32).
- When pressing the shutter button down fully in one motion, the camera takes the picture without the AF frame changing.

Flash
When pressing the shutter button down halfway, ☻ appears on the screen before the flash fires.

If you want to change the setting, see p.64 for information on flash.

⚠️ CAUTION
- The image shown on the screen before the picture is taken may differ in brightness, color, etc. from the image actually recorded. Play back the recorded image to check it (→p.36).
- When selecting a slow shutter speed that will cause camera shake, ☞ appears on the screen. Use flash or a tripod.
- See p.139-143 for information on warning displays. See “Troubleshooting” (→p.144-149) for more information.
Using the Camera

Indicator lamp display
The indicator lamp lights or blinks when pressing the shutter button, etc. The indicator lamp shows the camera status.

Table: Indicator lamp display

<table>
<thead>

| Blinking red                   | • Warnings for Memory Card and internal memory  
                                 |   Card not formatted, incorrect format, memory full, Memory Card or internal memory error  
                                 |   • Lens operation error                     |

MEMO
Detailed warning messages appear on the screen (→p.139-143).

Using Intelligent Face Detection when taking pictures
Intelligent Face Detection allows you to focus on and adjust the brightness of people’s faces. Intelligent Face Detection is effective with the camera held horizontally or vertically.

Available Shooting modes: AUTO, N, SP1/SP2 ( , , , , , , , ), N, M, <, >

1 Set Intelligent Face Detection.
Press . Intelligent Face Detection setting changes each time you press .

Red-eye effect, caused by the light of the flash reflecting off the inside of the eye, will be corrected automatically when a picture is taken with [ FACE DETECTION REMOVAL ON] set.

Continued ➤
**CAUTION**

- Correction results may differ depending on the scene.
- The processing may take more time if there are many faces in an image.

2. **Check the composition on the LCD monitor.**

When there are multiple people in the frame, Intelligent Face Detection will set a green frame around the face nearest to the center of the picture. This face has focusing priority.

3. **Press the shutter button down fully to take pictures.**

**CHECK [FACE DETECTION REMOVAL ON]**

When a picture is taken with [FACE DETECTION REMOVAL ON] set, the red-eye effect will be detected and corrected before the image is recorded.

1. Red-eye effect in an image will be detected after the shooting.

2. Processing will end when the red-eye effect is not detected.
Subjects not suitable for Intelligent Face Detection

Intelligent Face Detection automatically focuses on a face(s). However, difficulties will occur with the Intelligent Face Detection mode in the following situations:

- The face is obscured by glasses, sunglasses, a hat or hair.
- A person turned sideways, or who has their head tilted.
- The subject is too far away to recognize a face.

Intelligent Face Detection will not work in cases where the subject is standing on his/her head, is not a person (pet or other animal), or if the camera is not held correctly.

Use AF/AE lock (→p.31) to guarantee best result when shooting a subject that is not suited for Intelligent Face Detection.

⚠️ CAUTION

- If the camera or subject move as the picture is taken, the subject’s face may move out of the Intelligent Face Detection frame.
- When the camera is detecting multiple faces, the green frame is set around the face near the center. If you want to focus on another subject, move the camera so that the new subject is in the center of the screen.

If focus is still not achieved, press 📷 (Intelligent Face Detection) to turn off the function, and take the picture using AF/AE lock (→p.32).

Intelligent Face Detection can focus on a face in a white frame providing the subjects in the green and white frame are of the same focal length.

- Pressing the shutter button halfway with Intelligent Face Detection off, the focus will be on the center of the frame.

Taking pictures with the focus and exposure locked

In the above composition, the subjects are not in the AF frame. Pressing the shutter button halfway at this point will result in the subjects being out of focus.

AF/AE lock is useful:

Use AF/AE lock to guarantee best result when shooting a subject that is not suited to autofocusing (→p.33).

⚠️ CAUTION

When taking a picture in AF/AE lock, cancel 📷 Intelligent Face Detection.

Continued ➔
Taking Pictures (AUTO AUTO Mode)

Using AF/AE lock

1 Move the camera slightly so that one of the subjects is in the AF frame.

2 Press the shutter button down halfway to focus on the subject.

3 Continue to hold the shutter button down halfway. Move the camera back to the original image and press the shutter button fully.

MEMO

- AF/AE lock can be applied repeatedly before the shutter is released.
- On FinePix S1000fd, pressing the shutter button down halfway locks the focus and exposure settings (AF and AE lock).
Subjects not suitable for autofocus

FinePix S1000fd uses a high-precision autofocusing mechanism. However, it may have difficulty focusing on the following:

- Subjects photographed through glass
- Subjects that do not reflect well, such as hair or fur
- Subjects with no substance, such as smoke or flames
- Dark subjects
- Subjects with little or no contrast between the subject and the background (such as subjects dressed in the same color as the background)
- Shots where another high-contrast object (not the subject) is close to the AF frame and is either closer or further away than your subject (such as a shot of someone against a background with strongly contrasting elements)

For such subjects use AF/AE lock (→p.32).

AF-assist illuminator

Use this illuminator to focus on the subject in dimly lit conditions.

When pressing the shutter button down halfway, the camera fires the AF-assist illuminator (orange) while focusing on your subject.

MEMO

- Even when the AF-assist illuminator fires, the camera may have difficulty focusing in some conditions.
- Even though there is no danger to safety, do not expose it directly in someone’s eyes.
- When using the AF-assist illuminator in Macro mode, the camera may have difficulty focusing to take close-up shots.
- See p.111, 112 for information on turning the AF-assist illuminator off.
- AF-assist illuminator does not fire in Fireworks, 120mm flash, Off, or Panorama mode.
Using zoom function

Use the zoom lever to take pictures with zoom function. The zoom bar appears on the screen while the zoom lever is being used. Use digital zoom when you want to shoot the subject closer (p.116).

Adjusting the shot composition

Select the screen display.

Press DISP/BACK to change the screen display.

- Text displayed
- No text displayed
- Post shot assist window displayed
- Framing guideline displayed
Best framing

Position the main subject at the intersection of two lines in this frame or align one of the horizontal lines with the horizon. Use this frame as a guide to the subject’s size and the balance of the shot while composing a shot.

MEMO
Always use AF/AE lock when composing a shot. The image may be out of focus if AF/AE lock is not used.

Post shot assist window

Up to the last 3 photographed images appear on the post shot assist window. This serves as a guide for taking other shots with similar compositions.
Viewing the Images

Playback your images to check them. For important photographs, always take a test shot and view the image to make sure that the camera is working normally.

Setting the camera to Playback mode

Press \( \text{\textcopyright} \) during shooting to change to Playback mode.

When the camera is off, press \( \text{\textcopyright} \) for about 1 second to turn the camera on in Playback mode.

MEMO

- Press \( \text{\textcopyright} \) to play back the last shot.
- When playing back images shot with a camera other than FinePix S1000fd, \( \text{\textcopyright} \) a present icon appears on the screen.

CAUTION Still images viewable on FinePix S1000fd

This camera will display still images recorded on FinePix S1000fd or still images (excluding some uncompressed images) recorded on any FUJIFILM digital camera that supports xD-Picture Cards or SD Memory Cards. Clear playback or playback zooming may not be possible for still images shot on cameras other than FinePix S1000fd.

Select the screen display.

Press DISP/BACK during Playback mode to change the screen display.

Select the screen display.

Press DISP/BACK during Playback mode to change the screen display.

Text displayed

No text displayed

Sorting by date
Single-frame playback

To select the required image:
- Press ◀: last image
- Press ▶: next image

Selecting images

To select images on the thumbnail lists screen, hold down ◀ or ▶ for 1 second during playback. When releasing ◀ or ▶, camera returns to single-frame playback.

Playback zoom

1. Zoom in / Zoom out.

To zoom in an image during single-frame playback:
- W: wide zoom lever (zoom out)
- T: tele zoom lever (zoom in)

Turn to T or W to zoom in or out of an image.

Continued ➤
2 Display another part of the image.

Press ▲, ▼, ◀, or ▶ to display another part of the image.

MEMO
- Zoom cannot be performed when the images recorded by ◆ are played back.
- Press DISP/BACK to cancel playback zoom.

Sorting by date

In sorting by date mode, you can view all images taken on the same day.

1 Press ▲, ▼, ◀, or ▶ to move the cursor (colored frame) to the selecting frame.

2 Press MENU/OK to enlarge the image.
Selecting the date

1. Press ▲, ▼, ◀, or ▶ to move the cursor (colored frame) to ◀ on the upper left frame.
2. Press ◀ to display the selecting date.
3. Press ▲ or ▼ to move the cursor (colored frame) to select the date. Press ▲ or ▼ repeatedly to jump to the next page.
4. Press ◀.

Multi-frame playback

Use this function to display a single frame, 2 frames, 9 frames or 100 frames (Micro Thumbnail). You can compare and select images using the Multi-frame display. Use the zoom lever to change the display.

Continued ➔
Viewing the Images

2 frames playback

1. Press †, ‡, § or ¶ to select the images you want to compare.
2. Press MENU/OK to enlarge the image.

9 frames playback/100 frames playback (Micro thumbnails playback)

1. Press †, ‡, § or ¶ to change the colored frame and select an image.
   Press † or ‡ repeatedly to jump to the next page.
2. Press MENU/OK to enlarge the image.

Using Intelligent Face Detection when playing back pictures

You can display and enlarge the faces in images when playing back the images shot using the Intelligent Face Detection function (  is displayed) (→p.29).

1. Press ‡, then the frame(s) appears on the detected face(s) in pictures.
2. The detected face(s) is enlarged each time you press ‡.
3. Press †, ‡, §, or ¶ to display another part of the image (→p.37).

CAUTION

The images recorded by SM cannot be enlarged.

MEMO

Press DISP/BACK to return to normal playback.
Erasing the Images/Movies

Use this mode to erase unnecessary images or movies to have ample free space on the Memory Card or internal memory. Your camera calls images “frames”.

Using the erase button (🗑️/▲)

Pressing 🗑️ (▲) erases images easily.

1. Press ◀️ or ▶️ to select the erasing image.
2. Press 🗑️ (▲).
3. Press ◀️ or ▶️ to select [OK].
4. Press MENU/OK to erase the displayed image.

Erasing the images using [PLAYBACK MENU]

1. Press MENU/OK to open the [PLAYBACK MENU].
2. Press ▲ or ▼ to select 🗑️ ERASE.
3. Press ▶️.
4. Press ▲ or ▼ to select [FRAME] or [ALL FRAMES].
5. Press MENU/OK to confirm the setting.

Continued ➔
Erasing one frame at a time ([FRAME])

1. Press ▼ or ▲ to select the erasing frame (file).
2. Press MENU/OK to erase the currently displayed frame (file).

MEMO
To erase another frame (file), repeat above steps. When erasing frames (files) is completed, press DISP/BACK.

CAUTION
Pressing MENU/OK repeatedly erases consecutive frames (files). Take care not to erase a frame (file) by mistake.

Erasing all frames ([ALL FRAMES])

1. Press ▼ or ▲ to select [OK].
2. Press MENU/OK to erase all the frames (files).

MEMO
Press DISP/BACK to cancel erasing of all the frames (files). Some unprotected frames (files) will be left unerased.
MEMO

- When using a Memory Card, the images in the Memory Card are erased. When not using a Memory Card, the images in the internal memory are erased.
- Protected frames (files) cannot be erased. Unprotect the frames (files) before erasing them (→ p.98).
- [DPOF SPECIFIED. ERASE OK?] or [DPOF SPECIFIED. ERASE ALL OK?] appears, when erasing DPOF specified files is attempted.

CAUTION

Erased frames (files) cannot be recovered. Back up important frames (files) onto your PC or another media.
Using the Shooting Functions — Procedure of Setting

Specify the camera settings for taking pictures to get the best result. A general guide is given below.

1 Select the Shooting mode.
   Turn the Mode dial to select the Shooting mode. The camera settings are tailored to the scene being shot.

⚠️ CAUTION
   When you have been used for long periods in places subject to extreme temperature rises, it will lower your image quality and streaking may also be visible in your images. If this occurs, turn the camera off several times to prevent heating the camera.

Setting the Shooting Mode

You can select the most suitable setting according to the subject by selecting one of the Shooting modes.

**[AUTO AUTO]**

This is the easiest mode for providing crisp and clear shots.
Use this mode for ordinary photography.

Camera specifies all settings other than \( F \)-MODE ([QUALITY] and [FinePix COLOR]) automatically.

Set the Mode dial to **AUTO**.

**CHECK**

- See p.65 for information on the available flash modes.
- Only [AUTO] can be selected for the [ISO] (sensitivity) setting.

**[NATURAL LIGHT]**

This mode produces beautiful images that retain the natural ambience when shots are taken in low-light conditions.
This mode is also ideal for shooting indoor or situations where the flash cannot be used.
Camera sets the high-sensitivity setting when selecting the Natural light mode. This mode is effective for reducing camera shake and moving-subject blurring when taking pictures in low-light conditions.

Set the Mode dial to **N**.

**CHECK**

- Flash cannot be used in the Natural light mode.
- Only [AUTO] can be selected for the [ISO] (sensitivity) setting.
[SP1, SP2 SCENE POSITION]

This mode provides the best Scene position setting for the scene being shot. Choose from 13 types of scene.

Select the Scene position setting in the [SCENE POSITION] menu.

Set the Mode dial to SP1 or SP2.

About SP1 and SP2 of the Mode Dial
The camera enables to set the scene position for SP1 and SP2 separately. For example, select † for SP1 and ▲ for SP2 separately at traveling. The setting combination can be used for variety of shooting scene. The menu options of SP1 and SP2 are the same. However the options cannot be set for both SP1 and SP2.

MEMO
- SP1 and SP2 are set to † and ▲ as factory default settings.
- See p.65 for information on the available flash modes.
- [F CHROME] (→p.79) cannot be set.
- AF-assist illuminator does not fire in ▲, †, ‡, §, $, ¥, ON,  and PANO mode.
- Only [AUTO] can be selected for the [ISO] (sensitivity) setting.

Selecting Scene position setting

1. Press MENU/OK to open the menu.
2. Press ▲ or ▼ to select [ SCENE POSITION].
3. Press ▼.
4. Press ▲ or ▼ to select the setting.
5. Press MENU/OK to confirm the setting.

#### CHECK

- When setting ![SPORT] mode, the camera sets to ![HIGH-SPEED SHOOTING] (→p.82) automatically.
- Use a tripod to prevent camera shake for ![NIGHT], ![FIREWORKS] and ![PANORAMA], as a slow shutter speed is used.
- When setting ![FLOWER] or ![TEXT] mode, the camera sets to ![Macro] mode automatically.
- Check whether photography is permitted before using ![MUSEUM] mode.
Selecting the exposure time setting for [FIRE WORKS]

1. Press to open the setting screen.
2. Press ▲ or ▼ to select the exposure time.
[PANORAMA] PANORAMA

You can take panoramic pictures by stitching 3 pictures into a panoramic scene.

① Set the Mode dial to PANORAMA.

② You can select the direction of taking panoramic pictures from left to right or right to left by pressing ◄ or ►.

③ Take the first picture. Press MENU/OK if you want to save the first picture.

If the pan direction is left to right, a section from the right side of the first picture will appear on the left side of the second picture you will take, so that you can align the next shot in panoramic fashion.

④ Compose the second picture by overlapping the saved section of the first image onto the matching area in the viewfinder on the far left side. Then take your second shot. Press MENU/OK to save the second picture. Repeat one more time for a panoramic view of the combined pictures.

⑤ If you are only taking two pictures, press ▲ to stitch them together. After you take the third picture, press MENU/OK to stitch the pictures together. Press MENU/OK again to save the panoramic picture.

MEMO

- Use a tripod to prevent camera shake.
- Only the panoramic picture is saved.
- The picture size is set to 3M automatically.
- Exposure compensation and white balance are set with the first picture.
- The flash cannot be used.
Setting the Shooting Mode

[PROGRAM AE]

This is an automatic mode to specify the settings except for the shutter speed and aperture setting. This is a simple way to take pictures the same as the A Aperture-priority Auto and S Shutter-priority Auto modes (Program shift).

Set the Mode dial to P.

Shooting functions:
- [PHOTOMETRY] (→p.80)
- [WHITE BALANCE] (→p.81)
- [FOCUSING] (→p.83)
- [AF MODE] (→p.84)
- [SHARPNESS] (→p.86)
- [FLASH] (→p.87)
- [BRACKETING] (→p.87)

CHECK
See p.65 for information on the available flash modes.

Program shift

1. Press to open the setting screen.
2. Select different shutter speed and aperture setting combinations without changing the exposure setting.
3. Press the shutter button to take pictures.

MEMO
- Program shift can be used when Suppressed flash (→p.65) is set in flash mode.
- The shutter speed and aperture setting appear in yellow when the camera is in Program shift mode.
- Any of following cancels Program shift:
  - Changing the Mode dial setting
  - Setting the camera to Playback mode
  - Turning the camera off
  - Popping the flash up

CAUTION
When the brightness of the subject is outside the camera’s brightness metering range, [---] appears as the shutter speed and aperture setting on the screen.
[S SHUTTER PRIORITY AE]

This is an automatic mode to set the shutter speed. Use this mode to freeze a moving subject (fast shutter speed) or convey the impression of movement (slow shutter speed).

Set the Mode dial to S.

Shooting functions:
- [PHOTOMETRY] (p.80)
- [WHITE BALANCE] (p.81)
- [FOCUSING] (p.83)
- [AF MODE] (p.84)
- [SHARPNESS] (p.86)
- [FLASH] (p.87)
- [BRACKETING] (p.87)

CHECK
See p.65 for information on the available flash modes.

Setting the shutter speed

1. Press to open the setting screen.
2. Press ▲ or ▼ to select the shutter speed.
3. Press the shutter button to take pictures.

Continued ➤
Setting the Shooting Mode

CAUTION

When the correct exposure cannot be obtained with selected shutter speed, the aperture setting appears in red. When this occurs, adjust the shutter speed again.

When the brightness of the subject is outside the camera’s brightness metering range, [F---] appears as the aperture setting. When this occurs, press the shutter button down halfway to measure the light level again.

Shutter speed

When shooting a moving subject, you can either “freeze the motion” or “capture the sense of movement” by adjusting the shutter speed.

- **Fast**
  - Freezes the motion of the subject.

- **Slow**
  - Photographs the traces left by the subject’s movement.
[A APERTURE PRIORITY AE]

This is an automatic mode to set the aperture. Use this mode to have the area in front of and behind the subject out of focus (large aperture) or have both near and far subjects in focus (small aperture).

Set the Mode dial to A.

Shooting functions:
- [PHOTOMETRY] (→p.80)
- [WHITE BALANCE] (→p.81)
- [FOCUSING] (→p.83)
- [AF MODE] (→p.84)
- [SHARPNESS] (→p.86)
- [FLASH] (→p.87)
- [BRACKETING] (→p.87)

CHECK
See p.65 for information on the available flash modes.

Setting the aperture

1. Press to open the setting screen.
2. Press ▲ or ▼ to select the aperture.
3. Press the shutter button to take pictures.

Continued ➤
Setting the Shooting Mode

**CAUTION**

When the correct exposure cannot be obtained with selected aperture setting, the shutter speed appears in red. When this occurs, adjust the aperture setting again. When [ Forced Flash] is set, you can take a picture with a shutter speed of up to 1/45 sec.

When the brightness of the subject is outside the camera’s brightness metering range, [--] appears as the shutter speed.

---

**Aperture**

By adjusting the aperture, you can change the depth of focus (depth of field). Selecting a larger number of aperture (closed) obtains a larger depth of focus. Selecting a smaller number of aperture (open) has the area in front of and behind the subject out of focus.

The area in front of and behind the subject is also in focus in the shot.

The area in front of and behind the subject is out of focus.
[M MANUAL]

This is a shooting mode that allows for settings including the shutter speed and aperture. Set the Shooting functions to manual to easily control yourself.

Set the Mode dial to M.

Shooting functions:
- [PHOTOMETRY] (→p.80)
- [WHITE BALANCE] (→p.81)
- [FOCUSING] (→p.83)
- [AF MODE] (→p.84)
- [SHARPNESS] (→p.86)
- [FLASH] (→p.87)
- [BRACKETING] (→p.87)

CHECK
See p.65 for information on the available flash modes.

Setting the shutter speed

1. Press [ ] to open the setting screen.
2. Press ▲ or ▼ to select the shutter speed.
3. Press the shutter button to take pictures.

MEMO
- Use a tripod to prevent camera shake.
- In shots with long exposures, noise (dots) may appear on the image.

Continued ➔
Setting the Shooting Mode

![Image of shooting mode settings]

**CAUTION**

If the shutter speed is set to a speed 1/1000 sec., smearing (white stripes) may appear in the image (→p.156).

### Setting the aperture

1. Press to open the setting screen.
2. Press or to select the aperture.
3. Press the shutter button to take pictures.

---

**The exposure indicator**

Use the exposure indicator on the screen as a guide when setting the exposure. When the brightness of the subject is outside the camera's brightness metering range, the exposure indicator disappears on the screen.
Adjusting the Image Brightness (Exposure Compensation)

Use this menu for shots to get the correct brightness (exposure), such as shots with extremely high contrast between the subject and the background.

Available Shooting modes: P, S, A

Adjusting exposure compensation

Press D to display the exposure compensation setting screen.

⚠️ CAUTION
This function can only be used for P, S, A in Shooting mode.

Press D to open the setting screen.

Press or to set the compensation value.

Press D to confirm the setting.

Press the shutter button to take pictures.

☑️ CHECK
- The symbol indicating the compensation direction (– or +) turns yellow.
- The icon also turns yellow while exposure compensation is being set and then turns blue after setting is completed.
- The screen brightness will increase or decrease depending on the exposure compensation setting.

Continued ➤
Adjusting the Image Brightness (Exposure Compensation)

MEMO
- This setting is retained when the mode is changed or the camera is turned off (icon appears). Set the exposure compensation to “0” unless compensation is required.
- Any of the following disables exposure compensation:
  - Using the flash in [AUTO] or mode
  - Shooting dark scenes in or mode

Guide to compensation
- Backlit portraits: +2 steps to +4 steps (+2/3 EV to +1 1/3 EV)

- Very bright scenes (such as snowfields) and highly reflective subjects: +3 steps (+1 EV)

- Shots made up predominantly of sky: +3 steps (+1 EV)
- Spotlit subjects, particularly against dark backgrounds: –2 steps (–2/3 EV)
- Scenes with low reflectivity, such as shots of pine trees or dark foliage: –2 steps (–2/3 EV)
Macro/ Super Macro (Close-up)

Use this mode to take close-up shots.

Available Shooting modes: AUTO, N, SP1/SP2 (OFF, *), P, S, A, M

Press ( ) to select Macro mode. The Macro mode setting changes each time you press the ( ).

CAUTION
- When Super Macro is set, focal length is fixed to 60 mm (35 mm camera equivalent). Zoom function is not available.
- When Super Macro is set, flash cannot be used.

MEMO
- Use a tripod to prevent camera shake in Macro mode.
- Any of the following cancels Macro mode:
  - Changing the Mode dial to SP1, SP2 or mode
  - Turning the camera off
- If the flash is too bright, use flash brightness adjustment (p.87).
- Even if [MULTI] (p.85) in the [AF MODE] is set, the camera focuses near the center of the screen.
- AF-assist may not function correctly if the camera is up close to the subject, such as in macro-mode.
Setting the Flash

Flash photography is useful for taking pictures at night or indoor dark locations. Choose from 6 flash modes according to the type of shot. See p.65 for information on the available Shooting modes.

1 Press the Flash pop-up button to pop up the flash.

2 Turn the Command dial to select the flash mode setting.

[ AUTO AUTO FLASH]
Use this mode for ordinary photography. The flash fires as required by the shooting conditions.

[ AUTO RED EYE REDUCTION]
This mode is suitable for shooting portraits in low-light conditions. Use this mode to minimize red-eye (eyes appear in red in the finished photo).

MEMO Red-eye effect
When using the flash to take a picture of people in low-light conditions, their eyes sometimes appear red in the picture. This is caused by the light of the flash reflecting off the inside of the eye.

[ FORCED FLASH], [ FORCED FLASH]
Use this mode in backlit scenes, or to get the correct colors when taking a picture under bright lighting. In this mode, the flash fires in bright as well as dark conditions. Using synchronizes Red-eye reduction mode.

MEMO
When pressing the shutter button down halfway, appears on the screen before the flash fires.
This mode allows you to take pictures of people at night that clearly show both your subjects and the night time backdrop. To prevent camera shake, always use a tripod. Using \( \text{a} \) synchronizes Red-eye reduction mode. Using \( \text{b} \) selects slow shutter speeds of up to 8 seconds.

**CAUTION**

In bright scenes, overexposure may occur.

### Suppressed flash

Pressing the flash down changes the camera to Suppressed flash mode. This mode is suitable for situations where the flash cannot be used. Use a tripod to prevent camera shake when shooting in Suppressed flash mode in the dark condition.

#### Available flash modes in Shooting modes

Available flash modes in each Shooting mode are listed below.

- \( \text{c} \): FACE DETECTION
- \( \text{d} \): RED EYE REMOVAL

### Continued
Setting the Flash

CAUTION Notes on using flash

- If the shutter speed is set to a speed faster than 1/1000 sec., the image may appear dark even if the flash is used.
- If pressing the shutter button while the flash is charging (indicator lamp blinking orange), the picture will be taken without the flash (when using [AUTO] and 
- The flash charging time may increase when the batteries are low on charge.
- When taking a picture using the flash, the image may disappear and go dark briefly due to flash charging. The indicator lamp blinks orange during charging.
- The flash fires several times (pre-flashes and the main flash). Do not move the camera until the picture is taken.
Self-Timer

The self-timer is used in situations where the photographer is included in the shot.
Available Shooting modes: All

Setting self-timer

The self-timer setting changes each time you press ◎ (▼).

The last displayed setting is the selected mode.

◎: The picture is taken after 10 seconds.
◎: The picture is taken after 2 seconds.

Taking pictures using self-timer

1 Press the shutter button down halfway to focus on the subject and press the shutter button fully.

Pressing the shutter button down halfway that focuses on the subject.
Without releasing the shutter button, press the button all the way down (fully pressed) to start the self-timer.

Continued ➤
2 Take pictures in selected time.

A picture is taken after the self-timer lamp changes from lit to blinking (only blinks with the 2-second self-timer).

A countdown appears on the LCD monitor indicating the time remaining until the picture is taken.

Using the 2-second self-timer
This is useful when you worry about camera shake even if attaching the camera on a tripod.

MEMO
- To stop the self-timer, once it has started running, press DISP/BACK.
- Any of the following cancels the self-timer setting:
  - Completing the shooting
  - Changing the Shooting mode setting
  - Setting the camera to Playback mode
  - Turning the camera off
- Take care not to stand in front of the lens when pressing the shutter button as this can prevent the correct focus or brightness (exposure) from being achieved.

Taking pictures with the self-timer and Intelligent Face Detection function

Intelligent Face Detection
The Intelligent Face Detection function is especially useful when using the self timer since it ensures that faces will appear in focus automatically.
Taking pictures continuously

Use this mode to take pictures of a moving subject.

1 Press 📷 to display the continuous shooting setting screen.

2 Press ▲ or ▼ to select a Continuous shooting mode.

3 Press MENU/OK to confirm the setting.

⚠️ CAUTION

- Shooting continues as long as holding the shutter button down. In auto bracketing mode however, just press the shutter button once to shoot 3 frames.
- Number of available frames is limited depending on the available space on the Memory Card or internal memory. When auto bracketing, if there is insufficient space on the Memory Card or internal memory to record 3 frames, no pictures are taken.
- The focus is determined in the first frame and cannot be changed in mid-sequence (except for [LONG PERIOD]).
- The exposure is determined in the first frame, but in [LONG PERIOD] continuous shooting the exposure is adjusted for the scene being shot.
- The speed of continuous shooting varies depending on the shutter speed.
- The flash cannot be used as the flash mode is set to Suppressed flash. However, when the mode is changed back to normal photography, the flash setting specified before continuous shooting was selected is restored.
- For [TOP 3] continuous shooting and Auto bracketing, the results are always displayed after you shoot. Note that pictures taken using [LONG PERIOD] continuous shooting are recorded without displaying the results.
- In [LONG PERIOD] continuous shooting mode, only 1 frame can be shot when using the [LONG PERIOD] continuous shooting mode and Self-timer mode together.
- File recording time using [TOP 3] or [BRACKETING] may increase when record to a Memory Card or internal memory.

Continued ➡️
Taking pictures continuously

**[M] TOP 15[2M]**

Available Shooting modes: All (except for [Panorama])

Shooting continues up to 15 frames as long as the shutter button is held down. Use this setting when your priority is continuous shooting speed over image quality, during continuous shooting.

**MEMO**
- Whitish lines may appear around a bright spot in an image when using [M TOP 15[2M]]. In this case, use [M TOP 6[5M]].
- [QUALITY] (→p.78) is limited to 2M. The [QUALITY] setting changes and is displayed in yellow in the LCD monitor. When Shooting mode is set to other than [M TOP 15[2M]], the restriction is cleared.

**[M] TOP 6[5M]**

Available Shooting modes: All (except for [Panorama])

Shooting continues up to 6 frames as long as the shutter button is held down.

**MEMO**
- [QUALITY] (→p.78) is limited to 5M. The [QUALITY] setting changes and is displayed in yellow. When Shooting mode is set to other than [M TOP 6[5M]], the restriction is cleared.
[LONG PERIOD] continuous shooting

Available Shooting modes: All (except for PANORAMA)

Shooting continues as long as the shutter button is held down. This mode shoots up to Memory Card or internal memory end.

Press shutter button. Release shutter button.

MEMO
Continuous shooting mode and assist window (p.35) can be used together.

[LAST 3] continuous shooting

Available Shooting modes: All (except for PANORAMA)

Shooting continues as long as holding the shutter button down. This mode shoots up to 40 times. The camera records the final 3 frames shot when you release the shutter button.

Press shutter button. Release shutter button.

Continued →
Taking pictures continuously

[• BRACKETING]
Available Shooting modes: P, S, A, M

This mode shoots the same image with different exposure settings. Bracketing shoots 3 continuous frames, each with a different exposure setting. A is correctly exposed, B is overexposed and C is underexposed. The exposure range settings can be changed in [• BRACKETING] in the [SHOOTING MENU].

☑ CHECK
Auto bracketing settings (3) ±1/3 EV, ±2/3 EV, ±1 EV

⚠ CAUTION
• If the underexposed or overexposed frame is outside the camera’s control range, the picture is not taken with the specified setting increments.
• This function can only be used for P, S, A or M in Shooting mode.

MEMO Changing the setting (exposure range)

Press the MENU/OK to display the menu and change the setting in the [• BRACKETING] menu option (→p.87).

[• TOP 3] continuous shooting
Available Shooting modes: All (except for PANORAMA)

Shooting continues as long as holding the shutter button down. This mode shoots up to 3 frames.
Increasing LCD Monitor Brightness

This is useful when checking the shot composition for outdoor scenes.

**Increasing the LCD monitor brightness**

Press \( \odot \) (\( \uparrow \)) to increase the LCD monitor brightness. Press \( \odot \) (\( \uparrow \)) again to return to normal LCD monitor brightness.

MEMO

- This function is automatically canceled after each shot.
- When this function is active, it will increase the amount of speckling in images on the screen. This is normal and does not affect the photographed image.
- This function is purely for checking the composition of your shot. It does not increase the brightness of the image.
- Even if you increase the brightness in low-light conditions, you cannot check the subject.
- The color tones may vary depending on the subjects.

\( \odot \) blinks on the LCD monitor when the function is active.
Using $[F\text{-MODE MENU}]$ (Photography)/[$SHOOTING MENU$]

Use these menus to adjust image quality or focus. You can take pictures in a wide range of conditions.

Setting the $[F\text{-MODE MENU}]$ (Photography)

1. Press $F$ button to open the $[F\text{-MODE MENU}]$.
2. Press $\uparrow$ or $\downarrow$ to select the menu.
3. Press $\rightarrow$.
4. Press $\uparrow$ or $\downarrow$ to change the setting.
5. Press MENU/OK to confirm the setting.

Setting the $[SHOOTING MENU]$}

1. Press MENU/OK to open the $[SHOOTING MENU]$.
2. Press $\uparrow$ or $\downarrow$ to select the menu.
3. Press $\rightarrow$.
4. Press $\uparrow$ or $\downarrow$ to change the setting.
5. Press MENU/OK to confirm the setting.

</tr>
</tbody>
</table>
Changing the sensitivity setting (ISO)

Use this menu to specify required sensitivity setting of the ambient light around the subject. The larger value of the sensitivity, the higher sensitivity is obtained. The higher sensitivity settings will allow you to take pictures in darker locations.

CHECK

- Settings
  - [AUTO][AUTO(800)][AUTO(400)][3200][1600]/800/[400]/[200]/[100]/[64]

Selecting [AUTO][AUTO(800)][AUTO(400)] as the sensitivity setting, the camera selects the best sensitivity setting for the subject's brightness.

The selected sensitivity setting appears on the screen when the sensitivity setting is set to the setting other than [AUTO].

- About [AUTO(800)][AUTO(400)]
  - [AUTO(800)][AUTO(400)] can be selected when the Mode dial is set to P. For [AUTO(800)][AUTO(400)], sensitivity is automatically set in the same way as for [AUTO], but the highest sensitivity is limited. Select [AUTO(800)][AUTO(400)] depending on the scene.

MEMO

- When anything other than P, S, A and M in the Shooting mode is selected, only AUTO can be selected for the ISO (sensitivity) setting.
- When P, S, A and M in the Shooting mode is selected, AUTO cannot be selected for the ISO (sensitivity) setting.
- [QUALITY] is limited to 3M, when [ISO] is set to 3200. [QUALITY] automatically changes and is displayed in yellow in the LCD screen. When [ISO] is set to other than 3200, the restriction is cleared.

CAUTION

- Although higher sensitivity settings will allow you to take pictures in darker locations, they will also increase the amount of speckling in your images. Choose the sensitivity setting that best suits the conditions.
- When 3200 is set for [ISO], image resolution will be lower than if shot at a sensitivity setting lower than 1600.
Changing the quality setting
([QUALITY])

Use this menu to specify the image size (number of recorded pixels).
Select the quality setting for the scene being shot.

Quality settings in Shooting mode

<table>
<thead>
<tr>
<th>Quality mode</th>
<th>Sample uses</th>
</tr>
</thead>
<tbody>
<tr>
<td>10M F (3648 × 2736)</td>
<td>Printing at up to 10R (25.4 × 30.5 cm/10 × 12 in.) / A4 size / A3 size</td>
</tr>
<tr>
<td>10M N (3648 × 2736)</td>
<td>For better quality, select 10M F</td>
</tr>
<tr>
<td>3:2 (3648 × 2432)</td>
<td>Area shot excluding 3:2</td>
</tr>
<tr>
<td>5M (2592 × 1944)</td>
<td>Printing at up to 6R (15.2 × 20.3 cm/6 × 8 in.) / A5 size</td>
</tr>
<tr>
<td>3M (2048 × 1536)</td>
<td>Area shot with 3:2</td>
</tr>
<tr>
<td>2M (1600 × 1200)</td>
<td>Printing at up to 4R (10.2 × 15.2 cm/4 × 6 in.) / A6 size</td>
</tr>
<tr>
<td>1M (640 × 480)</td>
<td>To use for e-mail or web site</td>
</tr>
</tbody>
</table>

Area shot and quality setting

<table>
<thead>
<tr>
<th>Area shot excluding 3:2</th>
<th>Area shot with 3:2</th>
</tr>
</thead>
</table>

Normal shooting provides an aspect ratio of 4:3 and 3:2 shooting provides an aspect ratio of 3:2 (same aspect ratio as 35 mm film and post card).

MEMO

- The bigger the number of recorded pixels, the better the image quality becomes. As the number of recorded pixels becomes smaller, you will be able to record more frames to a Memory Card.
- The quality setting is retained even when the camera is turned off or the mode setting is changed.
- When changing the quality setting, the number of available frames also changes (→ p.154). The numbers to the right of setting show the number of available frames.
- [ISO] is limited to 1600 when [QUALITY] is set to 10M or 3:2. The [ISO] setting automatically changes and is displayed in yellow in the LCD screen. When [QUALITY] is set to other than 10M or 3:2, the restriction is cleared.
Changing the FinePix COLOR setting ([FinePix COLOR])

Use this menu to specify required color tone. It is effective for taking vivid shots or black and white shots.

**CHECK**

<table>
<thead>
<tr>
<th>FinePix COLOR settings</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>[STD] [F-STANDARD]</td>
<td>The contrast and color saturation are set to standard. Use this mode for normal photography.</td>
</tr>
<tr>
<td>![F-CHROME]</td>
<td>The contrast and color saturation are set to high. This mode is effective for taking more vivid shots of subjects such as flowers.</td>
</tr>
<tr>
<td>![F-B&amp;W]</td>
<td>This mode converts the colors in the photographed image to black and white.</td>
</tr>
</tbody>
</table>

When setting ![F-CHROME] or ![F-B&W], the icon appears on the screen.

**CAUTION**

When the Mode dial is set to SP1 or SP2, ![F-CHROME] does not appear on the screen.

**MEMO**

- The FinePix COLOR setting is retained even when the camera is off or the mode setting is changed.
- ![F-CHROME] may have little visible effect with some subjects or the scene being shot. You may not be able to see any difference on the screen.
[SHOOTING MENU]

Selecting light metering method ([PHOTOMETRY])

Available Shooting modes: P, S, A, M
(When Intelligent Face Detection is turned OFF)

Use this setting when the correct exposure cannot be obtained by the shooting conditions.

To use the photometry modes effectively

- [MULTI]
  In this mode, the camera uses automatic scene recognition to analyze the subject and provide optimum exposure in a wide range of shooting conditions.

- [SPOT]
  This mode is useful for subjects with strongly contrasting light and dark areas where you want to achieve the correct exposure for a particular feature.

- [AVERAGE]
  The advantage of this mode is that the exposure tends not to change for different compositions or subjects. This mode is particularly effective for shots of people wearing black or white clothing and shots of scenery.

- [[MULTI]] (Pattern): Light metering where the camera assesses the scene and selects the correct exposure.

- [[SPOT]]: Light metering where the exposure is optimized for the center of the image.

- [[AVERAGE]]: Light metering where an average value for the entire image is used.
Adjusting color balance ([WB WHITE BALANCE])

Available Shooting modes: P, S, A, M, [PANORAMA]

Adjust the color balance based on white to suit the color of the ambient light around the subject.

[AUTO]: Automatic adjustment

- Select the white balance be using white paper to suit the shooting conditions
- : Shooting outdoors in good weather
- : Shooting in shade
- : Shooting under Daylight fluorescent lamps
- : Shooting under Warm White fluorescent lamps
- : Shooting under Cool White fluorescent lamps
- : Shooting in incandescent light

[Custom white balance

2. Hold a piece of white paper under the light source for setting the white balance, so that it fills entire the screen. Then press the shutter button to set the white balance.

MEMO

To use the white balance set previously, press the MENU/OK without pressing the shutter button.

3. When the correct exposure is measured, [COMPLETED!] appears. Press MENU/OK to confirm the setting.

Continued ➔
**Example**
You can change the white balance for a photographed image by using colored paper instead of white paper.

**MEMO**
- In AUTO mode, the correct white balance may not be achieved for subjects such as close-ups of people’s faces and pictures taken under a special light source. Select the correct white balance for the light source.
- When the flash fires, the white balance (except for custom white balance) setting for the flash is used. Consequently, to achieve a particular effect, the flash mode should be set to Suppressed flash (→p.65).
- The specified custom white balance is retained until it is reset. This setting is retained even if the batteries are removed.
- The color tones may vary depending on the shooting conditions (light source, etc.).
- After taking the picture, check the image color (white balance).
- Explanation of Terms “White Balance” (→p.157).

---

**Focusing the shot quickly (HIGH-SPEED SHOOTING)**

*Available Shooting modes: All (except for PANORAMA)*

Use this mode to reduce the time required for focusing when pressing the shutter button down halfway. It is useful to avoid missing snapshot opportunities.

**CAUTION**
- [EVF/LCD MODE] in the [SET-UP] menu is automatically set to 60fps (→p.156).

**MEMO**
- When taking pictures while the [HIGH-SPEED SHOOTING] mode is set to [ON], the batteries will run down more quickly.
- When setting [Sport] mode, the camera sets to [HIGH-SPEED SHOOTING] mode automatically.
Specifying the focusing mode ([FOCUSING])

Available Shooting modes: P, S, A, M (When Intelligent Face Detection is turned OFF)

Use this mode to specify focusing mode that best suits the subject.

![CONTINUOUS AF] ![SINGLE AF]

[CONTINUOUS AF]

Use this setting to take pictures of a moving subject. The camera continues to focus on the main subject in the AF frame.

![CONTINUOUS AF]

**CAUTION**

- When using [CONTINUOUS AF], attention must be given to the battery level. The battery level (power consumption) increases when using [CONTINUOUS AF]. Because the camera focuses continuously without pressing the shutter button.
- When using [CONTINUOUS AF], [AF MODE] is set to [CENTER] automatically.

**Continued**
[SHOOTING MENU]

[SPORTING MENU]

[+] SINGLE AF
Use this setting to take picture of a static subject such as a landscape.

Specifying the focusing area (AF MODE)

Available Shooting mode: P, S, A, M
(When Intelligent Face Detection is turned OFF)

Use this mode to specify the focusing area that best suits the subject.

[ ] CENTER
The camera focuses on the center of the screen.
Use this setting when taking pictures with AF/AE lock (→p.31).
When pressing the shutter button down halfway, the camera recognizes any strongly contrasting subject near the center of the screen and displays the AF frame over subject in focus.

**CAUTION**

When taking pictures in Macro mode, the camera focuses on the center of the screen.

**MEMO**

When the AF frame does not appear in the focusing position, select [CENTER] in the AF mode and use AF/AE lock (p.31).

---

The camera changes the focusing position on the screen. Use this setting when composing the shot using a tripod and changing the focusing position.

1. Press ▲, ▼, ◀ or ▶ to move the (target point) to the focusing position.
2. The AF frame appears in the location to which the target point was moved when you press MENU/OK.
③ Press the shutter button to take pictures.

MEMO
• To reposition the AF frame, repeat step ①.
• Regardless of the AF frame location, the exposure is always set using the area in the center of the screen. To expose the shot for your main subject, use AF/AE lock (→p.32).

Adjust the image outline (hard/soft) ([SHARPNESS])

Available Shooting modes: P, S, A, M

Use this setting to soften or emphasize the outline and quality of an image.

[HARD]: Emphasizes the outlines. Best for shots of subjects such as buildings or text where sharp images are desirable.

[STANDARD]: Best for ordinary photography. Provides edge sharpness that is ideal for most picture taking situations.

[SOFT]: Softens the outlines. Best for shots of subjects such as people, where a softer image is desirable.
Adjust the amount of light emitted by the flash ([FLASH] (Brightness Adjustment))

Available Shooting modes: P, S, A, M

Use this setting to change the amount of light emitted by the flash to suit the photography conditions or to achieve a desired effect.

CAUTION

- Depending on the type of subject and the shooting distance, brightness adjustment may have no effect.
- The image may appear dark when setting the shutter speed to higher than 1/1000 sec.

Photograph the same image with different exposure ([BRACKETING])

Available Shooting modes: P, S, A, M

Use this setting to photograph the same image with different exposure settings. Bracketing shoots 3 continuous frames, one of which is correctly exposed while the remaining two are underexposed and overexposed respectively by a set amount.
[SHOOTING MENU]

CAUTION

- If the underexposed or overexposed frame is outside the camera’s control range, the picture is not taken with the specified setting increments.
- Flash photography cannot be used.
- This feature always takes 3 shots. However, if there is insufficient space on the Memory Card or internal memory for 3 shots, no picture will be taken.

MEMO Auto bracketing

After setting the exposure for bracketing, select [BRACKETING] by pressing .
Playback Information

Shooting information can be checked when the camera is set to single-frame playback mode. Press  to check the information. Press  again to return to playback mode.

---

**CAUTION**

- Highlight warning

Overexposed area blinks in black.

**Histograms**

A histogram is a chart showing the distribution of brightness in an image (horizontal axis: brightness; vertical axis: pixels).

1. **Optimal exposure:**
   - There is an ample distribution of pixels overall with a peak in the middle range.

2. **Overexposed:**
   - The number of highlight pixels is high with the distribution sloping upwards to the right.

3. **Underexposed:**
   - The number of shadow pixels is high with the distribution sloping upwards to the left.

**CAUTION**

The shape of the graph will vary depending on the subject.
Using \textit{[F-MODE MENU]} (Playback)/[PLAYBACK MENU]

Use these menus to playback photographed images.

\begin{itemize}
  \item \textbf{Setting the [F-MODE MENU] (Playback)}
  \begin{enumerate}
    \item Set the camera to Playback mode (p.36).
    \item Press \textit{F} button to open the [F-MODE MENU].
    \item Press \textbf{\textit{A}} or \textbf{\textit{V}} to select the menu.
    \item Press \textbf{\textit{L}}.
    \item Press \textbf{\textit{A}} or \textbf{\textit{V}} to change the setting.
    \item Press \textbf{\textit{MENU/OK}} to confirm the setting.
  \end{enumerate}
\end{itemize}

\begin{itemize}
  \item \textbf{Setting the [PLAYBACK MENU]}
  \begin{enumerate}
    \item Set the camera to Playback mode (p.36).
    \item Press \textbf{\textit{MENU/OK}} to open the [PLAYBACK MENU].
    \item Press \textbf{\textit{A}} or \textbf{\textit{V}} to select the menu.
    \item Press \textbf{\textit{L}}.
    \item Press \textbf{\textit{A}} or \textbf{\textit{V}} to change the setting.
    \item Press \textbf{\textit{MENU/OK}} to confirm the setting.
  \end{enumerate}
\end{itemize}
Setting automatic playback ([SLIDE SHOW])

Use this mode to playback photographed images continuously. You can select type of image transition.

MEMO
- To interrupt automatic playback, press MENU/OK.
- Press ◀ or ▶ to advance or go back through the images when selecting [NORMAL] and [FADE-IN].
- The Auto power off function (p.118) does not operate during playback.
- Movie starts automatically. When the movie ends, the playback function moves it on.
- Press DISP/BACK once during playback to display on-screen help.
- The date is displayed on the Slide Show (except [MULTIPLE]) if the date is displayed on the Single-Frame Playback.
- The camera plays back the image taken with Intelligent Face Detection (p.29) zoomed in on the detected face when [NORMAL] or [FADE-IN] is selected.

DPOF set frame ([PRINT ORDER (DPOF)])

You can specify the image, number of prints, with or without date of printing with a DPOF-compatible printer.

[WITH DATE]: The date will be imprinted on your prints.
[WITHOUT DATE]: The date will not be imprinted on your prints.
[RESET ALL]: All DPOF settings will be canceled.

Continued ➔
[WITH DATE] / [WITHOUT DATE]

Selecting [WITH DATE], □ appears on the screen and the date will be imprinted on your prints.

1 Press ▼ or ▲ to display the frame (file) for specifying DPOF setting.
2 Press ▲ or ▼ to set a value.
   Up to 99 sheets are printed.
   For frames (files) that you do not want printed, set the number of prints to 0 (zero).

To specify more DPOF settings, repeat steps 1 and 2.
3 Always press MENU/OK after the settings are completed.
   Pressing DISP/BACK cancels those settings.
4 Press MENU/OK again. The total number of prints appears on the screen.

MEMO Canceling DPOF setting

1 Press F to open the [F-MODE MENU] and press ▲ or ▼ to select [PRINT ORDER (DPOF)].
2 Press ▲.
3 Press ▲ or ▼ to select [WITH DATE □] or [WITHOUT DATE] and press MENU/OK to display the print order screen.
4 Press ▼ or ▲ to select the frame (file) with the DPOF setting you want to cancel.
5 Press ▼ to set the number of prints to 0 (zero).

To cancel the DPOF setting for another frame (file), repeat steps 4 and 5.
Always press MENU/OK to complete the settings.
• [RESET ALL] (→p.94)
MEMO

- When DPOF settings were specified on another camera.

When the data includes a frame (file) with DPOF settings that were specified on another camera, [RESET DPOF OK?] appears. Pressing MENU/OK erases all of the DPOF settings already specified for each frame (file). Specify the DPOF setting for each frame (file) again.
- Prints of up to 999 frames (files) can be ordered on the same Memory Card.
- DPOF settings cannot be specified for movies.

CAUTION

- Pressing DISP/BACK while choosing settings will cancel all current settings. If there were previous DPOF settings, only the modifications are canceled.
- When selecting the [WITH DATE ⌚] setting, the date is imprinted on your shots using the Print Service or a DPOF-compatible printer (depending on the printer specifications, the date may not be printed in some cases).
- Images photographed with a camera other than FinePix S1000fd may not be specified DPOF settings.

Intelligent Face Detection

When DPOF settings are set to the images taking with the Intelligent Face Detection (→ p.29) (.Face Detection) appears on the screen), press (Intelligent Face Detection), the frame appears around the detected face, and then the number of the detected faces is set to print number. It is easy to set the number of prints for each person in the picture. Press ▲ or ▼ to set the print number. Press (Intelligent Face Detection) again, the number of the detected faces is set to the print number. After setting, press MENU/OK.

Continued ➤
[RESET ALL]

To cancel all DPOF settings:

Select [RESET ALL] in the [F-MODE MENU] (→p.91).

Press MENU/OK.

MEMO

appears on the screen during playback when the image has specified DPOF settings.
PRINT ORDER (DPOF)

DPOF stands for Digital Print Order Format and refers to a format that is used for recording printing specifications for images shot using a digital camera on media such as a Memory Card. The recorded specifications include information on which frames are to be printed.

* Some printers do not support date and time imprinting or specification of the number of prints.
* The warnings shown below may appear while specifying the prints.

[DPOF SPECIFIED. ERASE OK ?]
[DPOF SPECIFIED. ERASE ALL OK ?] (→p.43)
When erasing the image, the DPOF setting for that image is deleted at the same time.

[RESET DPOF OK ?] (→p.93)
When inserting a Memory Card that contains images specified for printing by another camera, those print specifications are all reset and replaced by the new print specifications.

[DPOF FILE ERROR] (→p.142)
Up to 999 images can be specified on the same Memory Card.
Correcting red-eye effect in images ([RED EYE REMOVAL])

You can correct the red-eye effect in images taken with the Intelligent Face Detection (→p.29) ( appears on the screen).

---

**CAUTION**
- Correction results may differ depending on scene.
- The processing may take more time if there are many faces in the image.
- Images photographed with a camera other than FinePix S1000fd cannot be red-eye corrected.
- The corrected image is added as a separate file in the final frame and is indicated in the image.
- A red-eye corrected image is shown with a . The image cannot be corrected again.

---

**CHECK**

1. Red-eye effect in an image will be detected.
2. Processing will end when the red-eye effect is not detected.

---

1. Press or to select the frame taken with the Intelligent Face Detection.
2. Press MENU/OK to open [PLAYBACK MENU].
3. Press or to select [RED EYE REMOVAL].
4. Press .
5. Press MENU/OK to perform removal.
Rotating the images ([IMAGE ROTATE])

When shooting in the vertical position, the image appears horizontal on the screen. Use this mode to rotate an image and to display correct direction. Your camera calls images “frames”.

⚠️ CAUTION

Protected frames (files) cannot be rotated. Unprotect the frames (files) before rotating them (→ p.98).

MEMO

An image can be rotated only when playing back using FinePix S1000fd. You may not be able to rotate images that were shot with a camera other than the FinePix S1000fd. The panoramic picture cannot be rotated.

1. Press ◄ or ► to select the rotating frame (file).
2. Press MENU/OK to open the [PLAYBACK MENU].
3. Press ▲ or ▼ to select [IMAGE ROTATE].
4. Press ►.

5. Press ▲ or ▼ to rotate the image.
   ▼: Rotates the image clockwise at a 90 degree angle.
   ▲: Rotates the image counterclockwise at a 90 degree angle.

6. Press MENU/OK to confirm the setting. Next time the image is played back, it will be automatically rotated. Press DISP/BACK to cancel rotating the image.
Protecting the images
([PROTECT])

Use this mode to prevent frames (files) from being accidentally erased. Your camera calls images “frames”.

[FRAME] (set or reset a frame)

To protect or unprotect only the selected frame (file):

1. Press ◀ or ▶ to select the protecting/unprotecting frame (file).
2. Press MENU/OK to protect/unprotect the currently displayed frame (file).

Unprotected
Protected (Fn appears)

To protect another frame (file), repeat steps 1 and 2. When protecting frames (files) is completed, press DISP/BACK.

[SET ALL]

Press MENU/OK to protect all the frames (files).

[RESET ALL]

Press MENU/OK to unprotect all the frames (files).
MEMO To stop the procedure midway

If the images are very large, protecting or unprotecting all the frames (files) may take some time. If you want to take a picture or record a movie during the procedure, press DISP/BACK.

CAUTION

The Format function erases all the frames (files), including protected frames (files) (→ p.117).

Copying the images

It is possible to transfer saved images between the internal memory and a Memory Card. Your camera calls images “frames”.

Selecting COPY

1. Press \ or \ to select [\ INTERNAL MEMORY ➔ \ CARD] or [\ CARD ➔ \ INTERNAL MEMORY].
2. Press .

Copying the images to another Memory Card

Copy images from the Memory Card inserted in your camera to the internal memory using the Copy Image function, then remove that Memory Card and insert another Memory Card into the camera. Then, copy the images to the Memory Card from the internal memory.

Continued ➤
Copying one frame at a time ([FRAME])

1. Press ▲ or ▼ to select [FRAME].
2. Press MENU/OK.
3. Press ◀ or ▶ to select the copying frame (file).
4. Press MENU/OK to copy the currently displayed frame (file).

MEMO

To copy another frame (file), repeat steps 3 and 4. When copying frames (files) is completed, press DISP/BACK.

Copying all frames ([ALL FRAMES])

1. Press ▲ or ▼ to select [ALL FRAMES].
2. Press MENU/OK.
3. Press MENU/OK to copy all the frames (files).

⚠️ CAUTION

- When [MEMORY FULL] or [IN MEMORY FULL] appears on the screen, copying the data stops on the way.
- When copying the image that has specified DPOF setting, the DPOF setting is not copied.
Adding voice memos to the images ([VOICE MEMO])

Voice memos of up to 30 seconds can be added to still images.

Recording voice memos

1. Press ← or → to select the image to add a voice memo.
2. Press MENU/OK to open the [PLAYBACK MENU].
3. Press ▲ or ▼ to select [VOICE MEMO].
4. Press ▶.

5. Press MENU/OK to start recording.

The remaining recording time appears during recording.

Face the microphone to record your comment. Hold the camera about 20 cm (7.9 in.) away for the best results.
PLAYBACK MENU

1. Press \( \text{MENU/OK} \) to select an image file with a voice memo. \( \text{○} \) appears on the screen.

2. Press \( \downarrow \) to start playing back the voice memo.

The playback time appears on the screen along with a progress bar.

Playing back voice memo

MEMO

- When the image already has a voice memo

If you select an image that already has a voice memo, a screen appears in which you can select whether to rerecord the memo.

- When [PROTECTED FRAME] appears, unprotect the frame (-p.98).
- Voice memos cannot be added to movies.

CAUTION

Uncover the speaker.
The sound may be difficult to hear.

6. The voice memo ends when pressing \( \text{MENU/OK} \) midway or 30 seconds pass.

To record your comment: press \( \text{MENU/OK} \).
To rerecord the comment: press \( \text{DISP/BACK} \).
## Playing back voice memos

<table>
<thead>
<tr>
<th>Control</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Playback</td>
<td>Playback begins. The voice memo stops when playback ends.</td>
</tr>
<tr>
<td>Pause / Resume</td>
<td>Pauses the voice memo during playback. Press ▼ again to resume playback.</td>
</tr>
<tr>
<td>Stop</td>
<td>Stops playback. Press ◀ or ▶ while voice memo playback is stopped to go back to the previous file or advance to the next file respectively.</td>
</tr>
<tr>
<td>Fast forward / Rewind</td>
<td>Press ◀ or ▶ during playback to skip forwards or backwards through the voice memo. These buttons do not function while playback is paused.</td>
</tr>
</tbody>
</table>

### CHECK

- Audio recording format:
  - WAVE (→p.156), PCM recording format
- Audio file size:
  - Approx. 480 KB (for a 30-second voice memo)

### MEMO Playing voice memo files

You may not be able to play back some voice memo files recorded on other cameras.

### Adjusting volume of voice memos

Volume can be adjusted while playing back voice memos.

1. Press MENU/OK while playing back voice memo.
   - The voice memo is paused during playback.
2. Press ▲ or ▼ to adjust the volume.
3. Press MENU/OK to confirm your selection.
   - Camera starts to play back the voice memo.
Trimming the images
([ TRIMMING])

Use this mode to trim the required part of the photographed image.

☑ CHECK

Before selecting [ TRIMMING], select the trimming frame (file).

W:wide zoom lever
(Zoom out)

T:tele zoom lever
(Zoom in)

Zoom bar

1 Turn to T or W to zoom in or out on an image.

2 Press ▲, ▼, ◀ or ► to move to another part of the image.

3 Press MENU/OK.

4 Check the saved image size and press MENU/OK.
The trimmed image is added as a separate file in the final frame.
MEMO

- A saved image size varies depending on the zoom scale of step ①. For 0.3 M, OK YES option appears in yellow.
- Image sizes

<table>
<thead>
<tr>
<th>Size</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>5M</td>
<td>Printing at up to 6R (15.2 × 20.3 cm/6 × 8 in.) / A5 size</td>
</tr>
<tr>
<td>3M</td>
<td>Printing at up to 4R (10.2 × 15.2 cm/4 × 6 in.) / A6 size</td>
</tr>
<tr>
<td>2M</td>
<td>To use for e-mail or web site</td>
</tr>
</tbody>
</table>
- When ③ quality setting is selected, the image is trimmed to normal size (4:3 aspect ratio).

CAUTION

You may not be able to trim images that were shot with a camera other than FinePix S1000fd.

Intelligent Face Detection

Images taken with the Intelligent Face Detection (→p.29) (  appears on the screen). Press (Intelligent Face Detection), the face that is focused on is zoomed in to help crop the main subject. To specify a cropped part of the image according to preference, specify and adjust according to the procedure in [TRIMMING].
Recording Movies

Use this mode to record movies with sound.

1 Set the camera to 🎥 Movie mode.
Set the Mode dial to 🎥.

The available recording time appears on the screen.

Zooming the image

You must zoom beforehand as you cannot zoom during recording.

Turn the zoom lever to zoom in or out on an image.
2 Record movies.

Press the shutter button down fully to start recording. During recording, [REC] and a counter that shows the remaining time appear on the screen.

Recording ends when pressing the shutter button down halfway during recording or the remaining time runs out.

MEMO
There is no need to hold down the shutter button during recording.

☑️ CHECK Recording movies
- Specifications: Motion JPEG (→p.156), Monaural sound
- Quality selection method: 640 (640 × 480 pixels) 320 (320 × 240 pixels)
- Frame rate (→p.156): 30 frames per second (fixed)

MEMO
- The brightness and color of the screen shown during movie recording may differ from those shown before recording begins.
- The exposure and white balance will be automatically adjusted to the scene being shot even after recording has started.
- If recording is stopped immediately after it begins, 1 second of the movie is recorded onto the Memory Card or internal memory.

⚠️ CAUTION
- Because a movie is recorded onto the Memory Card or internal memory as it is saved, it cannot be recorded correctly if the camera suddenly loses power (if the batteries run out or the AC power adapter and DC coupler are disconnected).
- A movie file taken by FinePix S1000fd may not be playable on other cameras.
- [EVF/LCD MODE] in the [SET-UP] menu is automatically set to [30 fps] (→p.156).
- Because sound is recorded concurrently with the images, make sure that you do not cover the microphone with a finger, etc. (→p.12).
- Camera operation noises may be recorded during movie shooting.
- The size of a movie file can be up to 2 GB.
Recording Movies

Changing movie size

Press \( F \) to open the \([F]-MODE MENU\).[

![MODE MENU]

1. Press ➤.
2. Press ▲ or ▼ to change the setting.
3. Press MENU/OK to confirm the setting.

Quality settings in Movie mode

- \( 640 \) (640 × 480 pixels): For better quality
- \( 320 \) (320 × 240 pixels): To record longer movies

MEMO

- The quality setting is retained even when the camera is turned off or the mode setting is changed.
- In \( \text{Movie} \) mode, you cannot set the \([\text{ISO}]\) (sensitivity) setting and \([ \text{FinePix COLOR} \]) setting.
- See p.154 for information on recording times per Memory Card or internal memory.

CAUTION

If you shoot using the xD-Picture Cards with model numbers containing “M” such as DPC-M1GB, movie recording time may be reduced if you repeatedly record and erase (frame erase) image files. In such a case, erase all frames or format the xD-Picture Card before use. Back up important frames (files) onto your PC or another media.
Playing Back Movies

1. Press ◄ or ► to select the movie file. ✎ appears on the screen.

2. Press ▼ to begin playing back movie.

The playback time appears on the screen along with a progress bar.

<table>
<thead>
<tr>
<th>Control</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Playback</td>
<td>Playback begins. Playback stops when the end of the movie is reached.</td>

</tbody>
</table>

Continued ➔
MEMO

If the subject of the shot is very bright, white vertical streaks or black horizontal streaks may appear in the image during playback. This is normal.

CAUTION

- You may not be able to playback some movie files recorded on other cameras.
- To playback movie files on a PC, save the movie file on the Memory Card or internal memory to the PC’s hard disk and then playback the saved file.
- Uncover the speaker. The sound is difficult to hear.

Adjusting volume of movies

Volume can be adjusted while playing back movies.

1. Press MENU/OK while playing back movie.
The movie is paused during playback.

2. Press ▲ or ▼ to adjust the volume.

3. Press MENU/OK to confirm the setting.
Camera starts to playback the movie.
[SET SET-UP]

Using the [SET-UP] menu

1 Open the [SET-UP] menu.

   ① Press MENU/OK to open the menu.
   ② Press ▲ or ▼ to select [SET-UP].
   ③ Press ▶.

2 Change the page.

   ① Press ▲ or ▼ to select the page.
   ② Press ▼ to move to menu item.

3 Change the setting.

   ① Press ▲ or ▼ to select the menu.
   ② Press ▶.
    Different type of screen appears depending on selected item.
   ③ Press ▲ or ▼ to change the setting.
   ④ Press MENU/OK to confirm the setting.

**[SET-UP]**

### [IMAGE DISP.]

Use this setting to specify the way for displaying the check image screen (photograph result) after taking a picture.

- **[CONTINUOUS]**:
  The results are always displayed after you shoot. Press the MENU/OK to take another picture.

- **[3 SEC]/[1.5 SEC]**:
  The image appears for about 3 or 1.5 seconds and is then recorded.

- **[ZOOM (CONTINUOUS)]**:
  The image appears enlarged. Use this mode to check details of image.

- **[OFF]**:
  The results are not displayed.

**CAUTION**
- The color tones in images displayed when [3 SEC] or [1.5 SEC] is selected may differ slightly from those in the images actually recorded.
- [IMAGE DISP.] cannot be used when [LONG PERIOD] (→p.71) is set.

**MEMO**

*When a result is displayed with [CONTINUOUS] set, overexposed areas in an image can be checked by pressing 📷.*

---

### Enlarging images

Navigation screen (Current displayed image)

1. Turn to T or W to zoom in or out of an image.
2. Press ▲, ▼, ◀, or ▶ to display another part of the image.
3. Press MENU/OK to take another picture. The image is recorded automatically.

**MEMO**
- When 8M quality setting is selected, the image cannot be enlarged.
- Pressing DISP/BACK cancels the zoom setting.
- This function is disabled when setting the continuous shooting.

### Intelligent Face Detection

Images taken with the Intelligent Face Detection (→p.29). Press 📷 (Intelligent Face Detection) to alternate between the displayed faces. Turn the zoom lever to T or W to zoom in or out the selected face. Press ▲, ▼, ◀, or ▶ to display another part of the image.
[FRAME NO.]
Use this function to specify whether frame numbers are assigned consecutively from previous numbers or begin again.

[CONTINUOUS] [RENEW]

A

0001 0001
0005 0005

B

0006 0001
0010 0005

* Formatted Memory Card or internal memory used for both A and B.

[CONTINUOUS]:
Pictures are stored beginning from the highest file number stored on the last Memory Card or internal memory used.

[RENEW]:
Pictures are stored on each Memory Card beginning with a file number 0001.
Each image will be numbered consecutively from the last number used. So when recorded images in the Memory Card are erased, the number of the erased frame will not be used again.

CHECK
Frame number
File number
Directory number

The last 4 digits of the 7-digit number in the top right corner of the screen are the file numbers, while the first 3 digits show the directory number.

MEMO
• Setting this function to [CONTINUOUS] makes file management easier as it makes sure that file names are not duplicated when images are downloaded to a PC.
• When the camera settings are [RESET] (→p.113), the frame number setting ([CONTINUOUS] or [RENEW]) is changed to [CONTINUOUS] and the frame number itself does not return to 0001.
• In [CONTINUOUS] setting, images are stored beginning from the highest file number on the current Memory Card when the Memory Card already contains image files with file numbers higher than the highest file number on the last Memory Card.
• The displayed frame number may differ for images photographed on other cameras.
[DIGITAL ZOOM]
Use this function to shoot enlarged images than maximum optical zoom scale.

Zoom bar display

- **OFF**
  - Optical zoom: 12x

- **ON**
  - Optical zoom: 12x
  - Digital zoom: approx. 5.7x

MEMO
When zooming changes between optical and digital, the position of the “■” indicator stops. Turn the Zoom lever again to start the “■” indicator moving again.

[CAUTION]
Using the digital zoom allows you to enlarge your subject and shoot it. However, it will lower your image quality. Set the digital zoom when requiring it.

[PLAYBACK VOLUME]
Use this function to adjust volume while playing back movie and voice memo.

1. Press ▲ or ▼ to adjust the volume. The larger the number, the larger the volume is emitted. 0 (zero) indicates a sound deadening.
2. Press MENU/OK to confirm the setting.
[LCD BRIGHTNESS]
Use this function to adjust the screen brightness.

1. Press ▲ or ▼ to adjust the screen brightness.
   The indicator moves to the + to display the screen brightly or to the – to darken the screen.

2. Press MENU/OK to confirm the setting.

[FORMAT]
Initialize (format) the Memory Card or internal memory for use with the camera.

1. Press ◀ or ▶ to select [OK].

2. Pressing MENU/OK initializes the Memory Card or internal memory.

**CAUTION**
- The Format function erases all the frames (files), including protected frames (files).
- Back up important frames (files) onto your PC or another media.
- Do not open the battery cover during formatting. The Memory Card or internal memory could be damaged.
[SET-UP]

[Auto Power Off]
When this function is active and the camera remains unused for 2 or 5 minutes, it turns camera off. Use this function when you want to get the maximum possible running time from your batteries.

⚠️ CAUTION
The Auto power off function is disabled during slide show (→p.91), discharging rechargeable batteries (→p.137), and when a printer or a PC connection (→p.121, 130) is being used.

📋 MEMO To restore power to the camera
Refer to “Turning On and Off” (→p.21).

[Time Difference]
Use this function when traveling to destinations in different time zones. This function sets a time difference relative to the date and time currently set. When this setting is enabled, the specified time difference is applied when pictures are taken.

1 Use Time difference function.

Press ▲ or ▼ to change between [🏠 HOME] and [➡️ LOCAL].
To set the time difference, select [➡️ LOCAL].
[🏠 HOME]: Your home time zone
[➡️ LOCAL]: Your destination time zone
2 Move to [TIME DIFFERENCE] screen.

Press ▶.

3 Set time difference.

① Press ◀ or ▶ to select +/-, hour, and minute.

② Press ▲ or ▼ to change the setting.

③ Always press MENU/OK after the settings are completed.

☑ CHECK
Available time setting
-23:45 to +23:45 (in 15-minute increments)

☑ MEMO
In the time difference setting, when you change to the Shooting mode, and the date is displayed for 3 seconds, the date display turns yellow.

☑ CHECK
Upon returning from a trip, always change the time difference setting back to [HOME] and then check the date and time again.
Connecting to a TV

When connecting to a TV, images can be displayed on wider screen. Using slide show function (→p.91) together, you can have fun with folks.

Plug the A/V cable (included) into the A/V OUT (Audio/Visual output) socket of the camera.

CAUTION
Plug the A/V cable (included) and the AC power adapter correctly and push them in each terminal.

MEMO
- When connecting the A/V cable (included) to TV, the camera’s screen is turned off.
- The image quality for movie playback is lower than for still images.
- When connecting to a TV, even if you adjust the volume from the [PLAYBACK VOLUME], the TV volume cannot be changed. Refer to the instructions provided with your TV for more information on audio/video input for your TV.
- Use the AC-5VX (sold separately) and CP-04 (sold separately) when FinePix S1000fd is connected to a TV for long periods. See “Notes and Cautions” (included) for notes on the AC power adapter.

Video (yellow) → A/V OUT socket
Audio (white) → AC-5VX (sold separately) and CP-04 (sold separately)

Plug the other end of the cable into the audio/video input socket on the TV.
Connecting Camera Directly to Printer — PictBridge Function

When a printer that supports PictBridge is available, images can be printed by connecting the camera directly to the PictBridge-compatible printer without a PC.

Connecting to a printer

1. Connect the camera to your printer using the USB cable.

2. Connect the camera to a printer and turn the printer on. Press [ ⚫ ] for about 1 second to turn the camera on.

3. The following screen appears on the screen after a moment.

MEMO
Depending on the printer, some functions are disabled.

MEMO
Use the AC-5VX (sold separately) and CP-04 (sold separately) when FinePix S1000fd is connected to a printer.

“Specifying images for printing” → p.122
“Printing with DPOF setting” → p.123
Connecting Camera Directly to Printer — PictBridge Function

Specifying images for printing ([PRINT WITH DATE] / [PRINT WITHOUT DATE])

1. Press ◀ or ▶ to display the frame (file) for specifying PRINT setting.

2. Press ▲ or ▼ to set a value.
   Up to 99 sheets are printed.

To specify more PRINT settings, repeat steps 1 and 2.

3. Press MENU/OK to display the confirm setting.

4. Press MENU/OK again to download the data to the printer and start printing the specified number of prints.

MEMO

Even if MENU/OK is pressed with total number of images set at 0 (zero), the screen printing once appears on the screen. Press MENU/OK again and printing starts.

MEMO Printing with date

Press DISP/BACK to display the setting display.

Press ▲ or ▼ to select [PRINT WITH DATE].

Press MENU/OK.

CAUTION

[PRINT WITH DATE] is not available when the camera is connected to a printer that does not support date printing.
Printing with DPOF setting
[ Camera Connection ]

[ PRINT DPOF ]

① Press DISP/BACK to open the menu.

② Press ▲ or ▼ to select [ PRINT DPOF ].

③ Press MENU/OK to display the confirm setting.

④ Press MENU/OK again to download the data to the printer and start printing the specified frames (files) continuously.

☑ CHECK
To select [ PRINT DPOF ], the DPOF settings must be specified on FinePix S1000fd beforehand (→ p.91).

⚠️ CAUTION
Even when [WITH DATE] is specified in the DPOF settings (→ p.91), the date is not inserted on printers that do not support date printing.

Continued ➡
Press DISP/BACK to cancel the printing. Depending on the printer, the printing may not be canceled immediately or printing may stop midway through. When printing stops midway, briefly turn the camera off and then on again.

**MEMO**

DPOF setting can be specified for images on internal memory.

**CAUTION**

- In PictBridge function, images photographed on other than a camera may not be printed.
- The camera cannot be used to specify printer settings such as the paper size and print quality.
- Please connect the AC Power Adapter AC-5VX (sold separately) and DC Coupler CP-04 (sold separately) to your camera.
- Use internal memory or a Memory Card that was formatted on FinePix S1000fd.
- Movies cannot be printed.
- Images photographed with a camera other than FinePix S1000fd may not be printed.

---

**Disconnecting the printer**

① Check that [PRINTING] is not displayed on the camera’s screen.

② Turn the camera off. Unplug the USB cable.

*1 Models with one of the above operating systems pre-installed.

*2 When you install the software, login using a system administrator account (e.g. “Administrator”).

**CAUTION**

- Additional USB interface board is not guaranteed.
- Windows 95, Windows 98 and Windows NT cannot be used.
- Operation is not guaranteed on home-built PCs or on PCs running updated operating system software.
- When you reinstall or remove FinePixViewer, the Internet menu and your user ID and password for the FinePix Internet Service are deleted from your PC. Click the [Register now] button, enter your registered user ID and password and download the menu again.
Installation on a Windows PC

Do not connect the camera to your PC until the software installation is completed.

1 Install FinePixViewer as instructed by the on-screen instructions.

Launching the installer manually

   Windows Vista users should click [Computer] in the [Start] menu.

* The way file names are displayed differs as described below depending on your PC settings.
- File extensions (3-letter suffixes indicating the file type) may be shown or hidden. (e.g. Setup.exe or Setup)
- Text may be shown normally or all in uppercase (e.g. Setup or SETUP).

For Windows Vista users:
When loading the bundled CD-ROM on your PC, the [AutoPlay] window may appear. In this case, click [SETUP.exe].
When [User Account Control] window appears, click [Allow].

2 Install DirectX as directed by the on-screen instructions and then restart your PC. If the latest version of DirectX is already installed on your PC, this installation is not performed.

⚠️ CAUTION
- If the latest version of DirectX or Windows Media Player has not been installed, each software will be installed, and then the PC will restart.
- Do not remove the CD-ROM during this procedure.

3 After restarting the PC, a message appears stating [Installation of the FinePixViewer has been completed]. Remove the CD-ROM from your PC.
Software Installation

Installation on a Mac OS X

Pre-installation checklist

Hardware and software requirements

To run this software, you must have the hardware and software described below. Check your system before you begin the installation.

<table>
<thead>
<tr>
<th>Compatible Mac*1</th>

*1 PowerPC, Intel processor loaded
*2 Models with a USB port as a standard feature

CAUTION

- Connect the camera directly to the Macintosh using the USB cable (included). The software may not operate correctly if you use an extension cable or connect the camera via a USB hub.
- Push the USB connector fully into the socket to ensure that it is securely connected. The software may not operate correctly if the connection is faulty.
- Additional USB interface board is not guaranteed.

Continued ➦
1 Turn your Macintosh on and start up Mac OS X. Do not launch any other applications.

2 When the bundled CD-ROM is loaded into the CD-ROM drive, the [FinePix] icon appears. Double-click the [FinePix] icon to open the [FinePix] volume window.

3 Double-click on [Installer for MacOSX].

4 The Installer setup dialog appears. Click the [Installing FinePixViewer] button.

5 The [Authenticate] dialog appears. Enter the name and password for the administrator account and then click the [OK] button.*

* The administrator account is the user account used for Mac OS X installation and you can confirm the user account in the Accounts dialog in the System Preferences.

6 Install FinePixViewer as directed by the on-screen instructions.
7 The [FinePixViewer installation completed] message dialog appears. Then click exit button and close it.

⚠️ CAUTION
When Safari is used as the Web browser, a message may be displayed and the CD-ROM may not be removed. If this happens, click the Safari icon in the Dock to make Safari the active application and then select [Quit Safari] in the [Safari] menu to shut down Safari.

8 Launch [Image Capture] from the [Applications] folder.

9 Change the Image Capture settings. Select [Preferences...] from the [Image Capture] menu.

10 Select [Other...] from [When a camera is connected, open].

Connecting to a PC

By connecting the camera to a PC, your system can be expanded to fill a wide range of uses. Using “FinePixViewer” performs images saving, browsing and file management etc.

FinePixViewer Overview
Enables importing images, managing files and folders, and ordering prints using the internet (only Windows users).

⚠️ CAUTION
The Windows CD-ROM may also be required during installation. In this event, change CD-ROMs as directed by the on-screen instructions.

Refer to Software Installation (→ p.125, 127) the first time you connect the camera to your PC. Install the software first. Do not connect the camera to the PC before installing all the software.

1. Insert the Memory Card with images into the camera (→ p.18).
   You can use the xD-Picture Card and the SD Memory Card with the FinePix S1000fd. In this Owner’s Manual, these cards are expressed as “Memory Card”.

2. Connect the camera to your PC using the USB cable (included).

3. Press ‹ for about 1 second to turn the camera on in Playback mode.

4. Set your PC

MEMO
In Windows, if FinePixViewer is already installed, the driver will be set automatically. No action is required.
CAUTION

- FinePix S1000fd is compatible with PTP (Picture Transfer Protocol)/MTP (Media Transfer Protocol). A PTP/MTP-compatible camera is a camera that can recognize the PC and printer automatically when connected.
- Do not disconnect the USB cable (included) when the camera is communicating with a PC. If the USB cable (included) is disconnected during communication, the files on the Memory Card or internal memory may be damaged.
- In Mac OS X, you must set automatic setup the first time you connect the camera to your PC.
- When the camera and PC are exchanging data, the indicator lamp blinks alternately green and orange.
- Auto power off is disabled during USB connection.
- Before replacing the Memory Card, always disconnect the camera from the PC.
- The camera and PC may be exchanging data even when [Copying] disappears from your PC screen. Before disconnecting the USB cable (included), always check that the indicator lamp is off.
- Always use FinePixViewer to transfer images with voice memos to a PC.
- The cost of an Internet provider for connecting to the internet is the user’s responsibility.
- When using FinePixViewer to save images on a data server (network), FinePixViewer may not run as it would in a standalone PC environment.

CAUTION

- Always use the FUJIFILM AC Power Adapter AC-5VX (sold separately) and DC Coupler CP-04 (sold separately). If the camera suddenly loses power during data exchange, data exchange will not be performed correctly, and the Memory Card or internal memory could be damaged.
- Make sure that the USB cable (included) is connected correctly and securely.
- Connect the camera directly to the PC using the USB cable (included). The software may not operate correctly when you use an extension cable, or if you connect the camera via a USB hub.
- When your PC has more than one USB port, the camera can be connected to either port.
- When Windows 98 SE is used, the supplied software must be installed first before connecting the camera to a PC using the USB cable. The PC will not recognize the camera if it is connected before installation.
- A memory Card, the internal memory, data in a Memory Card or data in the internal memory could be damaged if any of the following are performed;
  - the USB cable is disconnected
  - ON/OFF switch or buttons are pressed

Continued ➤
Connecting to a PC

The following steps differ depending on the PC’s operating system (Windows XP/Vista and Mac OS X case)

When your PC recognizes the camera automatically, FinePixViewer automatically starts up and the Save Image Wizard window (Save Image dialog box) appears. Follow the instructions provided on screen to save the images. To proceed without saving the images, click the [Cancel] button.

⚠️ CAUTION

When there are many images stored on a Memory Card, it takes a while to display on the screen of your PC. Also, it may take a while to import images or you may be unable to save images. In this case, use an Image Memory Card Reader.

✉️ MEMO

- You can only see images saved on a PC. Save images on a PC.
- If you cancel saving by clicking the [Cancel] button, slide the power switch to turn off the camera and then disconnect it from the PC.
- When the camera is connected to your PC, FinePixViewer automatically starts up by the function of Exif Launcher, which is installed in FinePixViewer.

Proceed to “Using FinePixViewer” (→p.133).

⚠️ CAUTION (MAC OS X)

If FinePixViewer does not start up automatically, the software may not be installed correctly. Set your PC again after disconnecting the camera and restart.

⚠️ CAUTION (MAC OS X)

Note on disconnecting the camera

- Close all files in the camera, and make sure the camera is not exchanging data.
- The camera and PC may be exchanging data even when [Copying] disappears from your PC screen, especially in the case of copying large data amounts. Do not disconnect the USB cable (included), immediately after this message has disappeared. Always check that the indicator lamp is off first before disconnecting.
Using FinePixViewer

Mastering FinePixViewer
For all information on FinePixViewer functions, refer to [How to Use FinePixViewer] in the Help menu for details.

- What is explained in [How to Use FinePixViewer]...
[How to Use FinePixViewer] covers a range of topics, including batch processing and ordering prints.

Example: Looking up slide shows
① Click [How to Use FinePixViewer] in the FinePixViewer Help menu.
② Click [Basic Operation] and then click [Slide Show] in the menu that appears.
③ The [Slide Show] information appears. Press the [<<<] key to view the previous page or the [>>>] key to view the next page.

Uninstalling the software
Only perform this operation when you no longer require the installed software or when the software was not installed correctly.

Windows
① Check that the camera is not connected to the PC.
② Quit all currently running applications.
③ The steps for uninstalling software differ depending on the operating system. Follow the steps for each operating system to uninstall the software listed below.

Macintosh

The following software is to be uninstalled:
- FinePixViewer
- FinePix Resource
- FinePix Studio*
- RAW FILE CONVERTER LE*
* May not have been installed depending on the operating system.

To remove FinePixViewer
FinePixViewer Ver.5.*

To remove the driver software
FUJIFILM USB Driver

④ When the message appears, click the [OK] button.
Check your selection carefully since the process cannot be canceled once you click the [OK] button.
System Expansion Option

By using FinePix S1000fd together with other optional FUJIFILM products, your system can be expanded to fill a wide range of uses. Accessory availability may vary by country. Please check with your local Fujifilm representative to confirm product availability.
Accessories Guide

Visit the FUJIFILM web site for the latest information on camera accessories.
Accessory availability may vary by country. Please check with your local Fujifilm representative to confirm product availability.

• xD-Picture Card
  Use the following xD-Picture Cards:
  256MB/512MB/1GB/2GB
  There are two types of xD-Picture Card: standard type and Type M (containing “M” in the model number, such as DPC-M1GB).
  FinePix S1000fd is compatible with Type M, however they may not be compatible depending on the device used (Image Memory Card Reader, etc.).

• AC Power Adapter AC-5VX
  Use the AC-5VX when taking pictures or play back images for long periods or when FinePix S1000fd is connected to a PC.
  * The shape of the AC power adapter, the plug, and power outlet depend on the country.

• DC Coupler CP-04
  Use the CP-04 with AC-5VX when taking pictures or playback images for long periods or when FinePix S1000fd is connected to a PC.

• PC Card Adapter DPC-AD
  The PC Card Adapter allows the xD-Picture Card and SmartMedia to be used as a PC Card Standard ATA-compliant (PCMCIA 2.1) PC card (Type II).
  -Compatible with xD-Picture Card of 16 MB to 512 MB, and SmartMedia of 3.3 V, 2 MB to 128 MB.
  * This is not compatible with the SD Memory Card.

• CompactFlash™ Card Adapter DPC-CF
  Loading an xD-Picture Card into this adapter allows you to use the card as a CompactFlash card (Type I).
  * This is not compatible with the SD Memory Card.
Using Your Camera Correctly

Read this information and the “Safety Notes” (→ “Notes and Cautions” (included)), to make sure you use your camera correctly.

■ Places to Avoid
Do not store or use the camera in the following types of locations:
- In the rain or in very humid, dirty, or dusty places
- In direct sunlight or in places subject to extreme temperature rises, such as in a closed car in summer
- Extremely cold places
- Places with strong vibration
- Places with smoke or steam
- Places subject to strong electric magnetic fields (such as near broadcasting tower, power lines, radar, motors, transformers, magnets, etc.)
- In contact with chemicals such as pesticides
- Next to rubber or vinyl products

■ Damaged by Water or Sand
FinePix S1000fd can be damaged on the inside and outside by water and sand. When you are at the beach or close to water, make sure that the camera is not damaged by water or sand. Take care not to place the camera on a wet surface.

■ Damaged by Condensation
If the camera is carried from a cold location into a warm place, water droplets (condensation) may form on the inside of the camera or on the lens. When this occurs, turn the camera off and wait an hour before using the camera. Condensation may also form on the Memory Card. In this event, remove the Memory Card and wait a short time.

■ When the Camera is Not Used or is stored Periods of Time
If you do not intend to use the camera for a long period of time, remove the batteries and the Memory Card.

■ Cleaning Your Camera
- Use a blower brush to remove any dust on the lens, LCD monitor or viewfinder, and then gently wipe the camera with a soft, dry cloth. If any soil remains, apply a small amount of lens cleaning liquid to a piece of FUJIFILM lens cleaning paper and wipe gently.
- Do not scratch hard objects against the lens, LCD monitor or viewfinder.
- Clean the body of the camera with a soft, dry cloth. Do not use volatile substances or cleaning products these items can cause damage.

■ Using the Camera When Traveling
When traveling overseas, do not place your camera in the check-in baggage. Baggage can be subjected to violent shocks, and the camera may be damaged inside or outside.
Discharging rechargeable batteries

The Discharging rechargeable batteries function can only be used with Ni-MH batteries.
The Discharging rechargeable batteries function should not be used with alkaline batteries or lithium batteries as it will completely drain the battery charge.
Use the Discharging rechargeable batteries function in the following situations:
• When the batteries only last for a short time after being charged normally
• When the batteries have not been used for a long period
• When you purchase new Ni-MH batteries
Do not use the Discharging rechargeable batteries function while using the AC power adapter and DC coupler. In these situations, the Ni-MH batteries will not be discharged due to the external power supply.

To discharge rechargeable batteries:

1. Press [▲] to turn the camera on.
2. Press MENU/OK to display the menu on the screen.
3. Press ▲ or ▼ to select [SET-UP].
4. Press ▲ to display the [SET-UP] menu.
5. Press ◄ or ► to select 2.
6. Press ▲ or ▼ to select [DISCHARGE].
7. Press ▲.
8. Press MENU/OK.
9. Press ◄ or ► to select [OK].
10. The screen changes and discharging begins. When the battery level indicator blinks red and discharging ends, the camera turns off.

⚠️ CAUTION
To cancel discharging, press DISP/BACK.
Notes on the **xD-Picture Card™**, the SD Memory Card and the Internal Memory

### Handling Memory Card
- When inserting the Memory Card into the camera, hold the Memory Card straight as you push it in.
- Never remove the Memory Card or turn the camera off during data recording or erasing (Memory Card formatting) as this could be damaged to the Memory Card.
- The use of **xD-Picture Cards** is recommended with FinePix S1000fd. The recording quality cannot be guaranteed when **xD-Picture Cards** other than those manufactured by FUJIFILM are used.
- The Memory Card may feel warm when it is removed from the camera after taking pictures. This is normal.
- Do not put labels on the Memory Card. Peeling labels can cause the camera not to work properly.

#### MEMO Type M and H of xD-Picture Card
- **Type M**
  - There are two types of Memory Card: standard type and Type M (containing “M” in the model number, such as DPC-M2GB).
  - FinePix S1000fd is compatible with Type M.
- **Type H**
  - Type H and M share the same compatibility.
- **Usable USB drive**
  - Type H cannot be used with **xD-Picture Card** USB drive DPC-UD1, while Type M can.

### Internal Memory
- Images held in the camera’s internal memory may be corrupted or erased due to problems such as camera faults. Save your important data to another media (i.e., DVD-R, CD-R, CD-RW, hard disk, etc.).
- Data stored in the camera’s internal memory cannot be guaranteed in the event that the camera is submitted for repairs.
- When the camera is repaired, any data stored in the camera’s internal memory is subject to checking by the repairer.

### Using Memory Card or Internal Memory with a PC
- When taking pictures using a Memory Card or internal memory that has been used on a PC, reformat the Memory Card using your camera.
- When formatting, a directory (folder) is created. Image data is then recorded in this directory.
- Do not change or delete the directory (folder) or file names on the Memory Card or internal memory because this will make it impossible to use the Memory Card or internal memory in your camera.
- Always use the camera to erase image data.
- To edit image data, copy or transfer the image data to the PC and edit the copied or transferred data.
The table below lists the warnings that are displayed on the screen.

<td>Approx. 700 frames</td>
<td>Approx. 700 frames</td>
</tr>
</tbody>
</table>

According to the CIPA (Camera & Imaging Products Association) standard procedure for measuring digital still camera battery consumption (extract):
When using alkaline batteries, use the batteries supplied with the camera. You can use Ni-MH batteries also. The storage media should be **xD-Picture Card**.
Pictures should be taken at a temperature of +23°C (+73°F), with the LCD monitor turned on, the optical zoom moved from full wide-angle to full telephoto (or vice-versa) and back again to its original position every 30 seconds, the flash used at full power every second shot and the camera turned off and then on again once every 10 shots.
- Note: Because the number of available shots varies depending on the capacity of alkaline batteries, lithium batteries or the level of charge in Ni-MH batteries, the figures shown here for the number of available shots using batteries are not guaranteed.
The number of available shots will also decline at low temperatures.

**Camera dimensions** (W/H/D) 102.5 mm × 73 mm × 67.8 mm/4.0 in. × 2.9 in. × 2.7 in. (not including accessories and attachments)

**Camera mass** (weight) Approx. 325 g/11.5 oz. (not including accessories, batteries and Memory Card)

**Weight for photography** Approx. 420 g/14.8 oz. (including batteries and Memory Card)

**Operating Conditions** Temperature: 0°C to +40°C (+32°F to +104°F) 85% humidity or less (no condensation)

Specifications

- **Standard number of available frames/recording time per xD-Picture Card, SD Memory Card and internal memory**

  The number of available frames and recording time is approximate. Actual number of frames and recording time varies depending on the types of Memory Card or shooting condition. Also, the number of frames and recording time displayed in the LCD monitor may not decrease regularly.

* A movie recording will stop automatically when a movie file becomes approx. 2GB. If you want to continue recording another movie, press the shutter button again. The available recording time is displayed based on approx. 2GB.
If you shoot using the **xD-Picture Cards** with model numbers containing “M” such as DPC-M1GB, movie recording time may be reduced if you repeatedly record and erase (frame erase) image files. In such a case, erase all frames or format the **xD-Picture Card** before use. Back up important frames (files) onto your PC or another media.

* These specifications are subject to change without notice. FUJIFILM shall not be held liable for damages resulting from errors in this Owner’s Manual.

* The LCD monitor on your digital camera is manufactured using advanced high-precision technology. Even so, small bright points and anomalous colors (particularly around text) may appear on the monitor. These are normal display characteristics and do not indicate a fault with the monitor. This phenomenon will not appear on the recorded image.

* The operation error may be caused in a digital camera by the strong radio interference (i.e. electric fields, static electricity, line noise, etc.).

* Due to the nature of the lens, the edges of images may appear distorted. This is normal.
Deactivated batteries
Leaving an Ni-MH battery unused in storage for a long period may cause a rise in the level of substances that inhibit current flow inside the battery and result in a dormant battery. A battery in this state is referred to as deactivated. Because current flow is inhibited in a deactivated Ni-MH battery, the battery’s original level of performance cannot be achieved.

EV
A number denotes Exposure Value. The EV is determined by the brightness of the subject and sensitivity (speed) of the film or CCD. The number is larger for bright subjects and smaller for dark subjects. As the brightness of the subject changes, a digital camera maintains the amount of light hitting the CCD at a constant level by adjusting the aperture and shutter speed. When the amount of light striking the CCD doubles, the EV increases by 1. Likewise, when the light is halved, the EV decreases by 1.

Frame rate (fps)
The frame rate refers to the number of images (frames) that are photographed or played back per second. For example, when 10 frames are continuously photographed in a 1-second interval, the frame rate is expressed as 10 fps. For reference, TV images are displayed at 30 fps (NTSC).

JPEG
Joint Photographic Experts Group
A file format used for compressing and saving color images. The higher the compression rate, the greater the loss of quality in the decompressed (restored) image.

Memory effect
If an Ni-MH battery is repeatedly charged without first being fully discharged, its performance may drop below its original level. This is referred to as the “memory effect”.

Motion JPEG
A type of AVI (Audio Video Interleave) file format that handles images and sound as a single file. Images in the file are recorded in JPEG format. Motion JPEG can be played back by QuickTime 3.0 or later.

Smear
A phenomenon specific to CCDs whereby white streaks appear on the image when there is a very strong light source, such as the sun or reflected sunlight, in the photography screen.

WAVE
A standard format used on Windows systems for saving audio data. WAVE files have the “.WAV” file extension and the data can be saved in either compressed or uncompressed format. Uncompressed recording is used on this camera. WAVE files can be played back on a personal computer using the following software:
Windows: MediaPlayer
Macintosh: QuickTime Player
* QuickTime 3.0 or later
White Balance
Whatever the kind of the light, the human eye adapts to it so that a white object still looks white. On the other hand, devices such as digital cameras see a white subject as white by first adjusting the color balance to suit the color of the ambient light around the subject. This adjustment is called matching the white balance.

Exif Print
Exif Print Format is a newly revised digital camera file format that contains a variety of shooting information for optimal printing.
If you have technical questions or if you need repair service, ask the following local distributor. Please present the warranty card and your purchase receipt when you ask for repairs. Refer to the warranty card for conditions of the warranty. There is a case that repair and Technical support cannot be accepted for some models which your local distributor does not deal with. These lists are subject to change without notice.
